

ACKNOWLEDGEMENTS

I would like to express my sincere gratitude to Prof. Heinz-Peter Schultheiss, head of Department of Cardiology and Pneumology for offering me the opportunity to carry out this study in Charite Campus Benjamin Franklin.

I am deeply indebted to PD. Dr. Carsten Tschöpe, my supervisor, for the opportunity and support, and for his continuous guidance, encouragement and care throughout the entire period of study. Also his critical reading of this manuscript and insight and thoughtful comments are highly appreciated.

I would like to thank Dr. Sophie Van Linthout, who gave a critical reading and expert opinions for the dissertation, for her constructive and helpful discussion on this project and friendship.

I am very grateful to Mr. Alexander Riad, Dr. Dirk Westermann, for their technical assistances in the animal experiment. My sincere thanks also go to Dr. Marc Dorenkamp for his kindly help when I started the study in the laboratory and for his technical support in immunohistochemistry.

I would like to thank Mr. Michael Schupp in the Institute of Pharmacology (Charite, Campus Mitte) for the fruitful collaboration and performance of real-time PCR experiments.

I would like to extend my sincere thanks to Mr. Helmut Würdemann, whose constant support during my study in the laboratory in the last 2 years is very appreciated.

I extend my sincere thanks to Graduiertenkolleg 865 from Deutschen Forschungsgemeinschaft (DFG) for its financial support. My sincere thanks also go to Mrs. Carola Kusch, who dealt with numerous troublesome problems concerning my study in Germany.

I own my sincerest gratitude to my husband, my daughter and my parents for their love, care, encouragement and support throughout my study in Berlin.
