Acknowledgments

My special thanks to Prof. Volker Haak for his constructive support and review of this thesis. I want to thank Prof. Hans-Jürgen Götze for serving as my co-advisor, and for motivating me in my work.
Particular thanks to Dr. Heinrich Brasse for his assistance and guidance throughout the work, and to Dr. Volker Rath for his support in software system and for his guidance in geophysics.

To my collagues S. Friedel, J. Beike and W. Soyer I am grateful for the friendly field work we spent together and the stimulating discussions we had while working together.

I acknowledge the profound review made by Patricia Ritter and Alexander Gatzemeier of the theory developed in this thesis. I also would like to thank Oliver Ritter, Katrin Schwalenberg, Wolfgang Soyer and Sebastian Tauber for their constructive suggestions for improving different chapters of the manuscript.
Many thanks to Wolfgang Schnurr for his friendly assistance in geology, and to Prof. Reutter for the helpful information regarding the tectonic of the Precordillera. I thank also Arturo Belmonte his contribution in seismology.

I am also thankful to Prof. P. Weidelt for his initial and constructive guidance in statistics, and to Dr. Alan Chave for his assistance in statistical analysis and for encouraging me to publish.

Many thanks to Rachel Vigour for the linguistic correction of this thesis, and to Mirjam Bohm for correcting the "Kurzfassung".

The financial support of DAAD (Deutscher Akademischer Austauschdienst) allowed the realization of my PhD at the Freie Universität Berlin, and that of SFB267 allowed my participation in international Workshops.

I am grateful to Prof. Peter Giese for welcoming me at the institute. Without the motivation of Dr. Miguel Munoz, who encouraged me to continue in this field, I would have not had the opportunity to come to Berlin.

I thank my parents their constant moral support.
