

Acknowledgements

First of all, I give special thanks to my first supervisor Prof. Dr. Fischer who offered me the opportunity to work on this topic. His way of leading the *Institut für Weltraumwissenschaften* makes a motivating, outstanding working climate possible. I am very grateful to Prof. Dr. Ulbrich for agreeing to be second supervisor.

Many thanks go to all present and former colleagues who contributed to the excellent working climate, to fruitful discussions, impressive conferences and measurement excursions, and excellent quake sessions. I thank Martin Stengel and Stephan Brusch for the joint productive work on XTRA. Dr. René Preusker gave me innumerable pieces of advice and suggestions that improved this work. He developed the neural network software environment commonly used at the *Institut für Weltraumwissenschaften* which was also utilized in this work.

I would like to express my thankfulness to Dr. Eberhard Reimer for providing the validation data.

My friends Eyk Bösche, Sebastian Hölz, and David van der Kemp also contributed to finalize this work, somehow. Thanks to them.

Many thanks go to Susanne Pfeifer for her scientific support and all the rest.

Last but not least, I would like to thank my family. I am indebted to my sister Julia Reuter and to her linguistic skills. Her help offers me the opportunity to push all remaining

English mistakes in her shoes. I thank my parents Dorothee Reuter and Dr. Peter Reuter for always supporting me in every possible way.
