

Automatic Distribution of Object-Oriented Programs

PhD Thesis

Submitted by: **André Spiegel**

Supervisor: Prof. Klaus-Peter Lühr

2nd Supervisor: Prof. Henri E. Bal

Freie Universität Berlin
FB Mathematik und Informatik

Submitted: 7-Aug-2002

Defended: 13-Dec-2002

Acknowledgements

I would like to thank my supervisor, *Professor Klaus-Peter Löhr*, for his support and the unfailing precision with which he helped me shape the ideas in this thesis. Going over the concepts with him again and again was always a distinct pleasure. Perhaps I may finally convince him that arrays needn't be arrays, after all.

My second supervisor, *Professor Henri E. Bal*, has been very supportive of my work despite the physical distance. I thank him for the short but intensive time we had at the Vrije Universiteit Amsterdam, for the permission to use the DAS-2 supercomputer, and for the enormous amount of ideas put forth in the never-ending row of excellent papers by his group. Still, the sentence for which I am probably most indebted to him was: "*But not in your PhD!*"

I would also like to thank the *Graduiertenkolleg Kommunikationsbasierte Systeme (DFG)* for supporting me during the initial phase of this work, for providing an excellent forum to discuss the ideas, and shaping it up to ultimately become a thesis.

Two Master's Theses have been written in the Pangaea project, by *Sven Knöfel* and *Miriam Busch*, and I thank them for being part of this work for a while, giving me results that look as if they were my own, but aren't, and mostly, for ironing out many, many bugs in the systems involved.

Thanks go to the many members of Peter Löhr's group whom I've met during the time of this work, for being great company both on-topic and off-topic. In more or less chronological order, these include: *Boris Bokowski*, *Enno Scholz*, *Gerald Brose*, *Torsten Fink*, *Rick Hall*, *Karsten Otto*, and *Manuel Koch*.

Markus Dahm, with his Doorastha platform, has provided a critical component without which this work would not have been possible. I also thank the *JavaParty Team*, in particular *Michael Philippsen* and *Bernhard Haumacher*, for their support, ideas, and the discussions we had.

My friend *Rüdiger Vaas*, although he knows very little about computer science, has been an ongoing source of support and encouragement, and finally helped me count the pages. It is my pleasure to hand over the torch to him now, as he embarks on his own (his first!) PhD thesis on philosophical cosmology.

Warm thanks go to *T.D.*, for being with me and being without me.

Finally, I would like to thank my son, *David*, who is now almost two years old, simply for his existence. One day, he may be capable and inclined to understand what I have written here.

André Spiegel,
