

Phase, amplitude, and polarization pulse shaping in order to influence molecular processes

Mateusz Plewicki
Dissertation eingereicht am
Fachbereich Physik
der Freien Universität Berlin
Dezember, 2006

Diese Arbeit entstand in der Arbeitsgruppe von
Prof. Dr. Ludger Wöste an der Freien Universität Berlin

Berlin, Dezember 2006

1. Gutachter: Prof. Dr. Ludger Wöste
 2. Gutachter: Prof. Dr. Martin Wolf
- Disputation am 07.02.2007

Contents

1	Introduction	1
2	Introduction to polarization of light	5
2.1	Description of polarization by a Jones vector	5
2.2	Parametrization of the polarization ellipse	9
2.3	Jones matrices for the phase retarder and the nematic crystal modulator	14
2.4	Summary	19
3	Parallel setup	21
3.1	Mathematical description	21
3.2	Experimental setup	24
3.3	Stability of the setup	33
3.4	Polarization manipulation	35
3.5	Detection	39
3.6	Test pulses	47
3.7	Summary	50
4	Serial setup	52
4.1	Mathematical description	52
4.2	Experimental setup	55
4.3	The polarization manipulation	58
4.4	Pulses	64
4.5	Test optimizations	67
4.6	Summary	76
5	Extended serial setup	78
5.1	Modeling the crystal optical axis orientation	79
5.2	Multipass shaper	84
5.3	Grating influence on the transmission, phase, and polarization	88
5.4	Summary	89
