## **8. Curriculum Vitae and Acknowledgement**

### **8.1. Curriculum Vitae**

Mein Lebenslauf wird aus datenschutzrechtlichen Gründen in der elektronischen Version meiner Arbeit nicht veröffentlicht.

My curriculum vitae is for privacy reasons in the electronic version of the work not published.

## **8.2. Acknowledgement**

I would like to thank Prof. Dr. Joachim W. Dudenhausen for allowance to conduct the study in his clinic and for the financial aid to the congress participations in Germany. I do not know how to thank Prof. Dr. Wolfgang Henrich, who offered me this doctoral thesis and played a crucial role in my understanding not only of the fetal echocardiography but of all territories of ultrasound. He was for me there during working hours and after work, too. I am indebted to him for his endless support. My dear mother has always been a pushing power in almost every instance of my life. Her support during the last two difficult years are very valuable for me. I thank her from the deepest part of my heart. Senior physicians from our clinic Dr. Martin Brauer and Assoc. Prof. Dr. Ines Schönborn, residents of the Department of Obstetrics at Campus Virchow Klinikum, especially Dr. Jens Stupin, Dr. Elsa Hollatz, Dr. Nina Salomon, Dr. Ute Braig-Scherer and Dr. Nicole Gehrman helped me to recruit as many patients for our study as possible. I thank them a lot as they gave in their busy daily routine a thought to the hardships I may encounter if I will not have enough number of cases to evaluate. The doctor`s assistants and midwives in our clinic were always there with their kindness and helpfulness. When I was in a desperate condition they helped me out of it. I will never forget their help. My biggest thank goes to the mothers who allowed me to “look at the heart of their babies”. I experienced the most beautiful moments of my life with them scanning their babies and was delighted to see their curiosity as I explained them our research. It was a pleasure and privilege to have them.

## **Selbstständigkeitserklärung**

„Ich, Onur Önügören, erkläre, dass ich die vorgelegte Dissertation mit dem Thema: Assessment of Long Axis Ventricular Function in the Fetal Heart based on 2D Grey Scale Image Processing with a Tissue Tracking Algorithm selbst verfasst und keine anderen als die angegebenen Quellen und Hilfsmittel benutzt, ohne die (unzulässige) Hilfe Dritter verfasst und auch in Teilen keine Kopien anderer Arbeiten dargestellt habe.“

15.03.2010, Ibbenbüren
