
Acknowledgements

This PhD thesis is the result of a three-year project supervised by Prof. Randolph Menzel (Institut für Biologie, Neurobiologie, FU Berlin) and Prof. Nigel Franks (School of Biological Sciences, University of Bristol, UK). First, I wish to thank Prof. Menzel for making this study possible by allowing me to become a member of his research group and by helping to secure funding. He has always provided quick help in all organizational and scientific matters. His industriousness sets a high standard to strive for. I am very grateful to Prof. Franks for the inspiration and ideas which served as a starting point for this project. He has always been available and open-minded for intense scientific discussions from which I benefited tremendously.

Washington Njagi has been a very steadfast and pleasant assistant during the field work in Kenya and Uganda. I thank him for his excellent work and friendship. Besides him Alfred, Javan and Mwangi have provided valuable help in the forest. I thank Bill Gotwald for identifying many ants for me and his insights into *Dorylus* biology. I am grateful to Wanja Kinuthia who was always helpful in removing organizational problems in Kenya. Many thanks are also due to Stefanie Berghoff, Daniel Kronauer, Scott Powell, Marcell Peters, Christian Kost and Anna Dornhaus for inspiring exchange of ideas and help in other matters. Xavier Espadaler and Flavio Roces provided much welcome advice and support. Prof. Frey kindly gave me permission to use some of his group's facilities. I wish to thank Christine Grüber for supporting me and allowing me to work in her laboratory. Freerk Molleman, his Dutch team and later also Claudia Stickler made my stays at Kibale very enjoyable. In Berlin I shared an office with Philipp Peele, Daniela Pelz, Ana Silbering, Mathias Ditzen and Beate Eisermann who provided a lot of help and support over the years. Thank you! I am also thankful to Claudia Niggebrügge for translating parts of the Leroux and Raigner & van Boven texts. I am grateful to Sabine Funke and Mary Wurm for solving all administrative problems swiftly.

I wish to thank my wife Mercy for her love and always making me happy. I am also very grateful to my parents Heinz and Dorothee, my brother Tetje, my sisters Imke and Swantje as well as my friends Omar, Philipp, John, Chris, Klaus, Myriam, Lukas, Arne and Gregor for their support during all stages of this project. A big 'Thank you' goes out to Stefanie Berghoff, Scott Powell and Chris for reading and correcting various parts and versions of the text.

Finally I wish to thank the Kenyan Ministry of Education, Science and Technology, the Kenya Wildlife Service (especially Mr Bongo Woodley), the Uganda Wildlife Authority, the Uganda National Council for Science and Technology, and the Makerere University Biological Field Station for granting research permission. Funding was provided through doctoral fellowships by the Federal State Berlin and the DAAD.
