Intraindividual Variability in Positive and Negative Affect: Age-Related and Individual Differences in Magnitude and Coupling with Cognitive Performance

Dissertation

zur Erlangung des akademischen Grades
Doktorin der Philosophie
(Dr. phil.)

vorgelegt von

Dipl.-Psych.

Christina Röcke

Erstgutachter: Prof. Dr. Ulman Lindenberger,
Max-Planck-Institut für Bildungsforschung, Berlin

Zweitgutachter: Prof. Dr. Ralf Schwarzer,
Freie Universität Berlin

Betreuer:

Prof. Dr. Jacqui Smith, Max-Planck-Institut für Bildungsforschung, Berlin

Prof. Dr. Ulman Lindenberger, Max-Planck-Institut für Bildungsforschung, Berlin

Prof. Dr. Paul B. Baltes, Max-Planck-Institut für Bildungsforschung, Berlin

Berlin, 15. Dezember 2006

TABLE OF CONTENTS

DANKSAGUNG (ACKNOWLEDGMENTS)	VI
ABSTRACT	VII
ZUSAMMENFASSUNG	IX
INTRODUCTION	1
1. THEORETICAL BACKGROUND	3
1.1 The Lifespan Study of Intraindividual Variability: A New Look at Emotional Well-Being	5
1.1.1 Lifespan Propositions Linked to Short-Term Intraindividual Variability	7
1.1.2 Intraindividual Stability and Variability as Central Characteristics of Individuals	10
1.2 Patterns of Within-Person Fluctuations in Affect in Young and Older Adults	14
1.2.1 Fluctuations in Emotional Well-Being Within and Across Days in Young and Older Adults	14
1.2.2 Intraindividual Variability in Positive and Negative Affect Represents a Systematic Individual Difference Characteristic	16
1.2.3 Age-Related Differences in Intraindividual Variability in Emotional Well-Being	20
1.3 Individual Differences Beyond Age: Trait-Like and State-Like Correlates of Affect Variability	29
1.3.1 Trait-Like Correlates of Variability in Positive and Negative Affect	30
1.3.2 The Functional Nature of High versus Low Variability in Daily Affect	34
1.3.3 State-Like Correlates of Variability in Positive and Negative Affect	39
1.3.4 Age-Related Differences in Trait-Like and State-Like Correlates of Affect Variability	41
1.4 The Coupling of Affect and Cognitive Performance Within Individuals: A Sample Case of Dual-Tasking in Everyday Life	42
1.4.1 Functions of Positive and Negative Affect: Benefits and Costs for Cognition	44
1.4.2 Does the Cost/Benefit Ratio in the Emotion-Cognition Coupling Differ for Certain Subgroups?	50

2.	RESEARCH QUESTIONS AND HYPOTHESES	56
2.1	Are there Age-Related Differences in the Stable and Dynamic Characteristics of Day-to-Day Self-Reports of Positive and Negative Affect?	57
2.2	Does Age Explain Significant Amounts of Variance in Day-to-Day Fluctuations in Positive and Negative Affect Above and Beyond Personality? Are There Age-Related Differences in the Association Between Fluctuations in Positive and Negative Affect and Trait-Like and State-Like Correlates Representing Stress and Psychological Adjustment?	60
2.3	Are There Reliable Within-Person Associations Between Daily Positive and Negative Affect and Cognitive Performance, and Do Age or Other Individual Difference Factors Moderate This Coupling?	63
3.	METHOD	69
3.1	General Procedure	69
3.1.1	Intra-Person Dynamics Study Design	69
3.1.2	Baseline Assessment	70
3.1.3	Daily Assessment	71
3.1.4	Posttest Assessment	73
3.1.5	Recruitment	74
3.1.6	Strategies Used to Minimize Attrition	74
3.2	Specific Design, Procedure and Measures for the Dissertation Study	75
3.2.1	Baseline Assessment of Central Trait-Like Covariates	76
3.2.2	Central Daily Measures	81
3.2.3	Daily State-Like Covariates	85
3.2.4	Additional Control and Sample Descriptive Measures	85
3.3	Participants	88
3.4	General Statistical Procedures	92
3.4.1	Treatment of Missing Values	92
3.4.2	Variable Distributions and Treatment of Outliers	93
3.4.3	Alpha-Level Adjustment in Multiple Testing	96
3.4.4	Analytic Strategy	96

4. RESULTS	103
4.1 Age-Related Differences in Stable and Dynamic Characteristics of Day-to-Day Self-Reports of Positive and Negative Affect	103
4.1.1 Inspection of Adequacy of Daily Affect Data	105
4.1.2 Age-Related Differences in Aggregated Day-to-Day Mean Levels of Emotional Well-Being Across 45 Days	109
4.1.3 Age-Related Differences in the Time-Related Trends of Day-to-Day Positive and Negative Affect Across 45 Days	114
4.1.4 Age-Related Differences in Day-to-Day Intraindividual Variability (Fluctuation) in Positive and Negative Affect Across 45 Days	119
4.1.5 Summary of Findings on Age-Related Differences in Stable and Dynamic Characteristics of Daily Positive and Negative Affect	125
4.2 Trait-Like and State-Like Correlates of Intraindividual Fluctuations in Positive and Negative Affect	127
4.2.1 Does Age Explain Significant Amounts of Individual Difference Variance in Daily Affect Fluctuation Over and Above Personality Factors?	127
4.2.2 Associations Between Variability (Fluctuation) in Positive and Negative Affect and Trait-Like Psychological Well-Being	131
4.2.3 Age-Related Differences in the Coupling Between Daily Affect and Daily Stress and Events	133
4.2.4 Summary of Findings on Trait-Like and State-Like Correlates of Intraindividual Variability in Positive and Negative Affect	140
4.3 The Role of Age in Within-Person Coupling of Day-to-Day Fluctuations in Affect and Reaction Time Performance	141
4.3.1 The Day-to-Day Coupling of Positive and Negative Affect with Reaction Time Performance in Two Cognitive Tasks	142
4.3.2 Exploring the Role of Age and Other Individual Difference Variables in the Day-to-Day Coupling of Affect and Reaction Time Performance	150
4.3.3 Summary of Findings on Within-Person Coupling Between Affect and Cognitive Performance and Individual Differences in Coupling Patterns	154
5. DISCUSSION	159
5.1 Age-Related Differences in Stable and Dynamic Characteristics of Day-to-Day Emotional Well-Being	161
5.1.1 Older Adults Report Higher Levels of Day-to-Day Positive Affect than Young Adults	162
5.1.2 Daily Reports of Positive and Negative Affect Show Slight Decreases Across Nine Weeks in Both Age Groups	165

5.1.3	Older Adults' Emotional Well-Being is Characterized by Greater Day-to-Day Stability than Younger Adults' Emotional Well-Being	166
5.1.4	Summary and Conclusion About Age-Related Differences in Stable and Dynamic Characteristics of Day-to-Day Emotional Well-Being	171
5.2	Trait-Like and State-Like Correlates of Affect Variability	172
5.2.1	Age Matters More than Personality in Explaining Individual Differences in Affect Fluctuation	172
5.2.2	The Functional Significance of Variability in Affect for Psychological Adjustment: Differences by Affect Domain	174
5.2.3	Within-Person Coupling of Daily Affect, Stress, and Events: Mixed Evidence on Age and Emotional Reactivity	175
5.2.4	Summary and Conclusion About Age-Related Differences in the Trait-Like and State-Like Correlates of Affect Variability	177
5.3	Within-Person Coupling of Affect and Cognitive Performance: No Evidence for Age-Related Differences	178
5.3.1	Individuals Differ in Magnitude and Direction of Day-to-Day Emotion- Cognition Coupling	179
5.3.2	Older Adults are not More Susceptible to the Conjoint Fluctuation of Emotion and Cognitive Performance in Everyday Life than Young Adults	182
5.3.3	Exploration of Individual Differences in Emotion-Cognition Coupling Beyond Age: The Role of Personality and Mean Day-to-Day Cognitive Performance	184
5.3.4	Summary and Conclusion on the Role of Age-Related and Individual Differences in the Within-Person Coupling Between Emotion and Cognition	186
5.4	Limitations of the Present Study	186
5.4.1	Selection of the Adequate Unit of Time to Study Intraindividual Variability in Affect and Coupling to Cognitive Performance	186
5.4.2	Correlational Evidence not Suited for Causal Process Interpretation	188
5.4.3	Cross-Sectional Design Provides Evidence for Age Differences but not Age-Related Change	189
5.4.4	Reactivity and Retest Effects in Micro-Longitudinal Designs	190
5.4.5	Lack of Control for Occurrence of Stressors and Perturbations to the Psychological System	191
5.4.6	Limited Power to Identify Between-Person Differences	191
5.5	Strengths of the Present Dissertation	192
5.5.1	Advantages of Micro-Longitudinal Design	192
5.5.2	Multiple Indicators of Affect and Cognitive Performance	194

5.5.3	Comparison of Young and Older Adults	195
5.6	Directions for Future Research	195
5.6.1	Beyond Self-Report: Examining Age-Related Differences in Intraindividual Variability in Physiological and Behavioral Indicators of Emotion	195
5.6.2	Identifying Developmental Antecedants, Correlates, and Consequences of Intraindividual Variability in Positive and Negative Affect	196
5.6.3	Within-Person Coupling of Affect and Cognition: Individual Differences, Discrete Emotions, and Other Cognitive Tasks	197
5.6.4	Testing Processes Underlying Emotion-Cognition Coupling More Directly	199
5.7	Conclusion	200
