List of Figures	8
List of Tables.....	9
List of Tables in Appendices.....	10
Acknowledgements	11
Abstract.....	13
Zusammenfassung	14
1. INTRODUCTION	25
2. THEORETICAL BACKGROUND.....	27
2.1 Concepts of Intraindividual Variability	27
2.1.1 Early and Recent Conceptualizations of Intraindividual Variability	27
2.1.2 Putting Intraindividual Variability into a Lifespan Perspective	28
2.1.3 Different Types of Intraindividual Variability	30
2.1.4 Processing Fluctuations	32
2.2 Theoretical Accounts of Adult Age Differences in Processing Fluctuations	33
2.2.1 The Theory of Complexity Loss in Aging	34
2.2.2 The Neural Noise Hypothesis	36
2.2.3 Integrating the Perspectives of Complexity Loss and Neural Noise	39
2.3 Aging and Processing Fluctuations in Cognition	40
2.3.1 Processing Fluctuations: Reliable and Unique Measures of Cognitive Functioning	40
2.3.2 Aging is Associated with Increased Processing Fluctuations.....	41
2.3.3 Processing Fluctuations as Indicators of the Status of the Aged Cognitive System.....	42
2.3.4 Processing Fluctuations in Executive Functions (Attentional Control).....	43
2.3.4.1 Processing Fluctuations in Executive Control: Empirical Evidence.....	45
2.3.4.2 Higher Fluctuations in Executive Control in Older Adults.....	46
2.3.5 Summary: Processing Fluctuations in Cognition	47

2.4 Aging and Processing Fluctuations in Sensorimotor Performance	47
2.4.1 Processing Fluctuations: Important Dependent Variables in Sensorimotor Research .	48
2.4.2 Aging and Increased Sensorimotor Processing Fluctuations	48
2.4.3 The Importance of Postural Control in the Elderly Population.....	49
2.4.4 The Postural Control System.....	50
2.4.5 Aging-Related Changes in Postural Control.....	53
2.4.5.1 Changes in Subsystems.....	54
2.4.5.2 Age Differences in the Dynamic Aspects of Postural Control.....	55
2.4.6 The Interaction of Cognition and Sensorimotor Performance: The Relation to Aging	56
2.4.6.1 Dual-Task Interactions between Postural Control and Cognition	58
2.4.6.2 The U-shaped Curve Linking Postural Control and Cognitive Demand	59
2.4.7 Summary: Aging and Processing Fluctuations in Sensorimotor Performance.....	62
2.5 Sex Differences in Postural Control.....	62
2.6 Processing Fluctuations on Multiple Time Scales	63
2.7 A Methodological Caveat Regarding Between-Person Analyses.....	66
3. HYPOTHESES	69
3.1 Age Differences in Processing Fluctuations in Postural Control.....	69
3.2 Sex Differences in Processing Fluctuations in Postural Control	70
3.3 Processing Fluctuations in Postural Control: Cross-Domain Couplings	70
4. METHOD	72
4.1 Overview of the Intra-Person Dynamics Study	72
4.2 Sample.....	73
4.2.1 Recruitment Procedure and Assessment Periods	73
4.2.2 Assessment Periods.....	74
4.2.3 Exclusion Criteria for Participants.....	74

4.2.4 Sociodemographic Characteristics of the Sample	75
4.2.5 Sample Characteristics in Intellectual Functioning.....	77
4.2.6 Examining Sample Selectivity in Intellectual Functioning.....	78
4.3 Procedure	79
4.3.1 Baseline Assessment.....	79
4.3.2 Daily Assessments	80
4.3.2.1 Participation Rate.....	82
4.3.2.2 Time-of-Day Effects.....	84
4.4 Description of the Tasks and Data Analysis Procedures	84
4.4.1 Postural Control Tasks.....	85
4.4.1.1 Apparatus	85
4.4.1.2 Quantification Parameters of Postural Control.....	85
4.4.1.3 Standing Positions.....	86
4.4.1.4 Postural Control Assessed at the Baseline Assessment.....	88
4.4.1.5 Postural Control Assessed in Daily Sessions	88
4.4.1.6 Identification of Extreme Data in Postural Control.....	89
4.4.2 The Spatial Working Memory Task	91
4.4.2.1 Task Description and Apparatus	92
4.4.2.2 Reaction Time as the Dependent Variable of Working Memory Performance	93
4.4.2.3 Assessment of Working Memory at Baseline	93
4.4.2.4 Daily Assessments of Working Memory	93
4.5 Methodological Issues and Analytical Approaches	94
4.5.1 Description of Multilevel Models.....	95
4.5.1.1 General Principles of Multi-Level Modeling.....	95
4.5.1.2 Testing Hypotheses with Multi-Level Models.....	96
4.5.2 Dissociation of Processing Fluctuations from Trends.....	97

4.5.2.1 Theoretical Practice Functions.....	98
4.5.2.2 Examples of Trends across Days.....	98
4.5.2.3 Controlling for Intraindividual Trends in Spatial Working Memory	100
4.5.2.4 Controlling for Intraindividual Trends in Postural Control Performance	101
4.5.3 Contrasting Within-Person and Between-Person Correlations	102
4.5.4 Controlling for the Mean in Age Contrasts of Intraindividual Variability	103
4.6 Overview of Analyses	104
4.6.1 Dependent Variables	105
4.6.1.1 Baseline Postural Control Performance.....	105
4.6.1.2 Multiple Time-Scales of Intraindividual Performance Measures of Postural Control	105
4.6.1.3 Intraindividual Daily Working Memory Performance Measure.....	106
4.6.2 Analyses of Group Differences in Processing Fluctuations in Postural Control.....	106
4.6.3 Analyses of Intraindividual Couplings across Domains of Functioning.....	107
5. RESULTS	109
5.1 Statistical Assumptions of the Analysis of Variance and Covariance.....	110
5.2 Age Differences in Processing Fluctuations in Postural Control	111
5.2.1 Significant Age Differences in Moment-to-Moment Processing Fluctuations	111
5.2.2 Trial-to-Trial Processing Fluctuations in Postural Control	113
5.2.2.1 Significant Age Differences in Trial-to-Trial Processing Fluctuations.....	113
5.2.2.2 No Age Effects in Trial-to-Trial Fluctuations after Controlling for Interindividual Differences in Moment-to-Moment Fluctuations	114
5.2.3 Day-to-Day Processing Fluctuations in Postural Control	116
5.2.3.1 Outline of the Estimation Procedure of Trends in Postural Control.....	116
5.2.3.2 Trends in Simple Standing Postural Control	117
5.2.3.3 Trends in Dual-Task Standing Postural Control.....	119

5.2.3.4 Age Differences in Day-to-Day Processing Fluctuations	122
5.2.3.5 Significant Age Differences in Day-to-Day Fluctuations after Controlling for Moment-to-Moment Sway at Baseline but not after Controlling for Moment-to-Moment Sway across 45 Days.....	122
5.3 An Individual-Based Control Strategy of Interindividual Differences in Moment-to- Moment Sway in the Analysis of Trial-to-Trial Fluctuations	124
5.3.1 Interindividual Differences in Within-Person Relations of Moment-to-Moment and Trial-to-Trial Fluctuations.....	124
5.3.2 Significant Age Differences in Within-Person Residual Trial-to-Trial Fluctuations ...	128
5.4 Sex Differences in Processing Fluctuations in Postural Control	129
5.4.1 Sex Differences in Moment-to-Moment Processing Fluctuations	129
5.4.2 No Reliable Sex Differences in Trial-to-Trial Processing Fluctuations.....	130
5.4.3 No Reliable Sex Differences in Day-to-Day Processing Fluctuations.....	131
5.5 Processing Fluctuations in Postural Control: Cross-Domain Couplings	132
5.5.1 Within-Person Correlations of Processing Fluctuations in Postural Control and Working Memory	133
5.5.2 Multi-Level Coupling of Day-to-Day Processing Fluctuations in Postural Control and Working Memory	134
5.5.2.1 No Age Interactions in Cross-Domain Couplings of Processing Fluctuations....	135
5.5.2.2 Interactions of Level of Postural Control and Working Memory in Cross-Domain Couplings	136
5.5.2.3 Interactions of Age and Sex in Cross-Domain Couplings: Older Males Differ ...	140
6. GENERAL DISCUSSION.....	144
6.1 Summary of Empirical Findings.....	144
6.2 Age Differences in Processing Fluctuations of Postural Control.....	145
6.2.1 Age Differences in Moment-to-Moment Processing Fluctuations	145

6.2.2 Age Differences in Processing Fluctuations in Postural Control on More Extended Time Scales.....	147
6.2.3 Interactions of Processing Fluctuations Across Time Scales.....	148
6.2.3.1 A Critique on the Between-Person Approach to the Distance-to-Boundary Problem.....	149
6.2.3.2 Within-Person Control of Interdependencies Among Processing Fluctuations Across Multiple Time Scales	151
6.2.4 Implications of Processing Fluctuations in Postural Control on Multiple Time Scales	152
6.3 Sex Differences in Processing Fluctuations in Postural Control	153
6.4 Day-to-Day Couplings between Postural Control and Working Memory	154
6.4.1 Why Study the Cross-Domain Couplings at the Level of Individuals?	155
6.4.2 The Study of Cross-Domain Couplings with Respect to Processing Fluctuations.....	156
6.4.2.1 Intraindividual Cross-Domain Couplings.....	157
6.4.2.2 A Dual-Process Model of Interindividual Differences in Cross-domain Couplings	158
6.4.3 Interindividual Differences in Cross-Domain Couplings.....	160
6.4.4 Interactions of Cross-Domain Coupling and Levels of Postural Control	161
6.4.5 Why do Older Males Show Strong Cross-Domain Couplings?.....	162
6.5 Limitations and Outlook	163
6.5.1 Limitations in Sample Size	163
6.5.2 Counterbalancing between Single-Task and Dual-Task Conditions in Postural Control	164
6.5.3 Age-Related Differential Reliability of Cross-Domain Couplings.....	165
6.5.4 Issues in Approximating the Degrees of Robustness of the Postural Control System	166

6.5.4 Process Specificity in Models of Sensorimotor and Cognitive Coupling.....	167
6.5.4.1 A Framework for the Dynamic Study of Cross-Domain Couplings and Interferences.....	167
6.5.4.2 Processes Potentially Involved in Cross-Domain Couplings Between Postural Control and Cognition.....	168
6.5.4.3 Age Differences in Sensorimotor-Cognitive Couplings: Key Features of Future Research	169
6.6 Conclusions.....	170
7. REFERENCES	171
8. APPENDICES	190
8.1 Appendix A. Levene’s Tests of Equality of Error Variance in ANOVA Analyses of Processing Fluctuations in Postural Control	190
8.1.1 Moment-to-Moment Fluctuations	190
8.1.2 Trial-to-Trial Fluctuations	190
8.2 Appendix B. A Detailed Description of the Trend Estimation Procedure in Postural Control Performances.....	192
8.2.1 Trends in Simple Standing Postural Control.....	192
8.2.2 Trends in Dual-Task Standing Postural Control.....	194

List of Figures

- Figure 1. *Differentiating between Subtypes of Short-Term Intraindividual Variations*
- Figure 2. *The U-shaped Relation between Cognitive Demand and Postural Control as a Function of Age*
- Figure 3. *Design of the Intra-Person Dynamics Study*
- Figure 4. *Experimental Design of Daily Assessments*
- Figure 5. *Times of Daily Assessments among Young Adults and Older Adults*
- Figure 6. *Illustration of the Extreme-Value Identification Procedure*
- Figure 7. *Trends across Days of Four Individuals in A) Simple standing, B) Dual-Task Standing, and C) Working Memory Speed*
- Figure 8. *Illustration of the Independence of Within-Person and Between-Person Relationships: A) Between-Person Relationship based on five Persons. B) Five Within-Person Relationships*
- Figure 9. *Age Differences in Moment-to-Moment Processing Fluctuations in Postural Control at Baseline and on Average across 45 Days of Assessment in Simple Standing and Dual-Task Standing (Area/ mm^2)*
- Figure 10. *Age Differences in Trial-to-Trial Processing Fluctuations in Postural Control on Average across 45 Days of Assessment in Simple standing and Dual-Task Standing (Area/ mm^2)*
- Figure 11. *Age Differences in Trial-to-Trial Processing Fluctuations in Simple standing and Dual-Task Standing Displayed as a Function of No-Control, Control for Moment-to-Moment Fluctuations at Baseline, Control for Daily Average Moment-to-Moment Fluctuations*
- Figure 12. *Average Trends in Simple Standing as a Function of Age*
- Figure 13. *Average Trends in Dual-Task Standing as a Function of Age*
- Figure 14. *Age Differences in Day-to-Day Processing Fluctuations in Postural Control on Average across 45 Days of Assessment in Simple Standing and Dual-Task Standing (Area/ mm^2)*
- Figure 15. *Age Differences in Day-to-Day Processing Fluctuations in Simple Standing and Dual-Task Standing Displayed as a Function of No-Control, Controlling for Moment-to-Moment Fluctuations at Baseline, Controlling for Average Daily Moment-to-Moment Fluctuations*
- Figure 16. *Standardized Regression Coefficients of the Intraindividual Relationships between Moment-to-Moment and Trial-to-Trial Fluctuations Displayed Separately for Age Groups and Experimental Conditions*
- Figure 17. *Age Differences in Trial-to-Trial Processing Fluctuations in Simple Standing and Dual-Task Standing Displayed as a Function of No-Control and Person Centered Control of Moment-to-Moment Fluctuations across Days*
- Figure 18. *Age and Sex Differences in Moment-to-Moment Processing Fluctuations in Postural Control at Baseline and on Average across 45 Days of Assessment in Simple Standing and Dual-Task Standing (Area/ mm^2)*
- Figure 19. *Age and Sex Differences in Trial-to-Trial Processing Fluctuations in Postural Control (Area/ mm^2) in Simple Standing and Dual-Task Standing*
