
10. Acknowledgement

The greatest thanks go to Katrin Linke, my colleague and for many years now my partner. I have to thank her professional and energetic support helping me in data collection; a task which I could not have achieved alone. Furthermore, her love gave me the needed stability in the difficult and demanding phases of this work.

Particular thanks go to my advisor, Professor Todt at the Free University of Berlin, for all his guidance and support. In this context I also wish to express my gratitude for the numerous scientific discussions and the assistance given by Professor Adelung at the University of Kiel, by Professor Heinrich at the University of Heidelberg and by my colleagues Elke Bojanowski, Frank Veit and Henrik Brumm at the Institute for Behavioral Biology.

The technical aspects of the experimental work presented here would not have been possible without the support of the Technology Foundation of the State of Schleswig-Holstein, the scientific input from Russell Leaper from the ifaw in Yarmouth Port, Cape Cod, Massachusetts and the innovative ideas from my engineers Jörg Burmeister and Uwe Apel from the GKSS Research Center in Hamburg.

Furthermore, I am very grateful to Melanie Busch and Ina Matthes for the collection of much data in Israel.

My special thanks go to the Borguss family from “Dolphin Plus”, to Deana Hogland from Island Dolphin Care, Inc., and last but not least to Roni Zilber from “Dolphin Reef”, who gave me the opportunity to observe sessions in progress. Her agreement, tolerance and openness towards scientific questioning made this work possible. I would like to thank all the employees of “Dolphins Plus” Center in Key Largo and “Dolphin Reef” in Eilat for the various contributions in Florida and Israel.

I would also like to sincerely thank Helen Clayton, Kate Pennell, Antje Heinrich and Jan and Allison Plass for proofreading our manuscripts, and Roger Mundri for much advice on statistics. In this context, I would like to especially mention the patience of the referees of the various journals; I have learnt a great deal through their work.

Not least, I wish to thank my parents, who taught me to strive more for worthwhile things than for financial security. This supported me immensely.

A dissertation of an interdisciplinary nature, with limited material means and where data must be gathered at various institutions in different countries is made possible through the generous support of a great many people. I ask forbearance of all those who have not been explicitly mentioned here. My unlimited gratitude extends also to you.

The “object” of my interest was the dolphins, and so my final thanks must go to them for their tolerance, along with an apology for my disturbance of their environment.
