

Acknowledgment

First of all, I want to express my gratitude to Prof. Ertl, who allowed me to undertake my Ph.D. research in the Fritz-Haber-Institute. He is acknowledged for the financial support at the last stage of my Ph.D.

I am indebted to Dr. Over for his continuous support and fruitful discussions. He led me to the UHV chamber used for this work and to the program of Prof. Moritz for LEED I/E analysis. He is also acknowledged for the critical reading of the manuscript.

The Korean Government is acknowledged for the financial support during my Ph.D.

I am obliged to Prof. Christmann, who gave me the opportunity to present my results in his group seminar. He is also acknowledged for progressive comments on my research.

I am grateful to many other coworkers in the Fritz-Haber-Institute. Special thanks go to S. Wendt and A.P. Seitsonen for fruitful discussions. I want to express my gratitude to A. Morgante, S. Schwegmann, T. Rahman, M. Knapp and Y.J. Zhu for their fruitful discussions. Mrs. Reinhardt deserves special thanks for proofreading the manuscript.

I thank Prof. Jacobi, who enabled me to present the results regularly in the Doktorandenseminar. He is also acknowledged for lending me a Ru(10 $\bar{1}$ 0) crystal.

Prof. G. Krabbes is acknowledged for providing me with RuO₂ single crystals.

I am indebted to Prof. S.B. Lee in Sungkyunkwan University in Korea for his support. He motivated me to come to the Fritz-Haber-Institute for my Ph.D.

Especially, I thank my Korean friends at the Physical Chemistry Department in the Fritz-Haber Institute, Kim Minseok, Lee Jae Young and Kim Sang Hoon for comments on my thesis as well as mental support.

I am really grateful to my family, especially to my parents for their continuous support and encouragement. At last, I want to express my special thanks to my wife, Nam Young. I would not have fulfilled my Ph.D thesis without her support.
