

Phylogenetic Significance of Mesodermal and Neural Structures in Bryozoa

Dissertation
zur Erlangung des Doktorgrades
am Fachbereich Biologie, Chemie und Pharmazie
der Freien Universität Berlin

vorgelegt von
Alexander Gruhl
aus Bielefeld

Juni 2008

1. Gutachter: Prof. Dr. Thomas Bartolomaeus (FU Berlin)
2. Gutachter: Prof. Dr. Klaus Hausmann (FU Berlin)

Datum der Disputation: 16.07.2008

Danksagung

Ich möchte mich herzlich bei Herrn Prof. Dr. Thomas Bartolomaeus für die Betreuung und Unterstützung während der gesamten Arbeit bedanken. Herrn Prof. Dr. Klaus Hausmann danke ich für die freundliche Bereitschaft, das Zweitgutachten zu übernehmen.

Die gute Arbeitsatmosphäre in der AG 15 hat dazu beigetragen, dass das Arbeiten an der Dissertation (nahezu) immer viel Spaß gemacht hat. Vor allem danke ich Björn Quast für die vielen interessanten Diskussionen, Ideen und Vorschläge in Bezug auf die Arbeit, und auch darüber hinaus. Ein großer Dank gilt auch Peter Grobe und Harald Hausen, die bei vielen wissenschaftlichen und technischen Problemen eine große Hilfe waren. Bei Tobias Kaller und Thomas Stach möchte ich mich für hilfreiche Korrekturvorschläge bedanken.

Meine Eltern haben mein Interesse an der Biologie immer unterstützt, wofür ich ihnen sehr dankbar bin.

Besonders danken möchte ich meiner Freundin Elena, die mir immer zur Seite stand und Kraft gegeben hat.

This dissertation is based on the following manuscripts:

Chapter 2:

Gruhl A, Bartolomaeus T (2008). Ganglion ultrastructure in phylactolaemate Bryozoa: Evidence for a neuroepithelium. *Journal of Morphology* 269(5):594-603

Chapter 3:

Gruhl A, Wegener I, Bartolomaeus T (submitted) Ultrastructure of the body cavities in Phylactolaemata (Bryozoa) *Journal of Morphology*

Chapter 4:

Gruhl A (2008a). Muscular systems in gymnolaemate bryozoan larvae (Bryozoa: Gymnolaemata). *Zoomorphology* (in press, available online DOI: 10.1007/s00435-008-0059-3)

Chapter 5:

Gruhl A (submitted) Serotonergic and FMRFamidergic nervous systems in gymnolaemate Bryozoa (Bryozoa: Gymnolaemata) *Zoomorphology*

Chapter 6:

Gruhl A (submitted) Ultrastructure of mesoderm formation and development in *Membranipora membranacea* (Bryozoa: Cheilostomata)

The contributions of the different authors were as follows:

Chapter 2:

I wrote the manuscript and performed all laboratory work and data analysis. I discussed the data with Thomas Bartolomaeus.

Chapter 3:

I wrote the manuscript, performed data analysis and all laboratory work on *Plumatella emarginata* as well as the majority in *Fredericella sultana*. Ines Wegener accomplished all laboratory work on *Lophopus crystallinus* and made initial studies on *Fredericella sultana*. Thomas Bartolomaeus supervised Ines Wegeners work and discussed the data with me.

Contributions by further persons are mentioned in the acknowledgements of each chapter.

Table of contents

1 General Introduction	8
References	10
2 Ganglion ultrastructure in phylactolaemate Bryozoa: evidence for a neuroepithelium	13
Introduction	13
Materials and Methods	15
Results	16
Gross morphology	17
Ganglion structure	19
Neuroepithelial cells	20
Nervous connections and peripheral nervous system	20
Discussion	22
Phylogenetic considerations	23
Conclusions	25
Acknowledgements	25
References	25
3 Ultrastructure of the body cavities in phylactolaemata Bryozoa	28
Introduction	28
Material and methods	30
Results	30
Plumatella emarginata	30
Lophopus crystallinus	36
Fredericella sultana	36
Discussion	40
Epistome cavity	40
Forked canal and excretory function	42
Acknowledgements	43
References	43
4 Muscular systems in gymnolaemate bryozoan larvae	46
Introduction	46
Materials and methods	49
Collection of larvae	49
Phalloidin staining	49
Scanning Electron Microscopy	50
Results	50
Flustrellidra hispida	50

Alcyonidium gelatinosum	53
Membranipora membranacea	54
Bugula fulva	56
Bowerbankia gracilis	59
Discussion	60
Additional data from literature	61
Comparison of muscle groups	62
Musculature and evolution of bryozoan larval types	66
Acknowledgments	68
References	68
5 Serotonergic and FMRFamideergic nervous systems in gymnolaemate bryozoan larvae	73
Introduction	73
Materials and methods	75
Collection of larvae	75
Antibody staining	75
Electron Microscopy and Histology	76
Results	76
Flustrellidra hispida	76
Bugula fulva	82
Alcyonidium gelatinosum	86
Bowerbankia gracilis	87
Discussion	89
Central neural elements	91
Apical organ	92
Neural elements in the corona	94
Functional aspects of the nervous system	96
Other bryozoan larvae	97
Comparison with other lophotrochozoans	97
Conclusion	99
Acknowledgments	99
References	100
6 Ultrastructure of mesoderm formation and development in Membranipora membranacea (Bryozoa: Cheilostomata)	106
Introduction	106
Material and methods	107
Results	109
Early cleavages	109
Early gastrula	111
Mid gastrula	112
Late gastrula	112

Early cyphonautes larvae	115
Discussion	118
General embryology	118
Mesoderm formation in Gymnolaemata	118
Cyclostomata and Phylactolaemata	121
Comparison to other taxa	122
Conclusion	124
Acknowledgments	124
References	124
Summarizing discussion	130
Relationships within Bryozoa	130
Monophyly of Bryozoa	131
Position of Bryozoa in the Phylogenetic System	133
