

Focus on RT

Focus on Balance

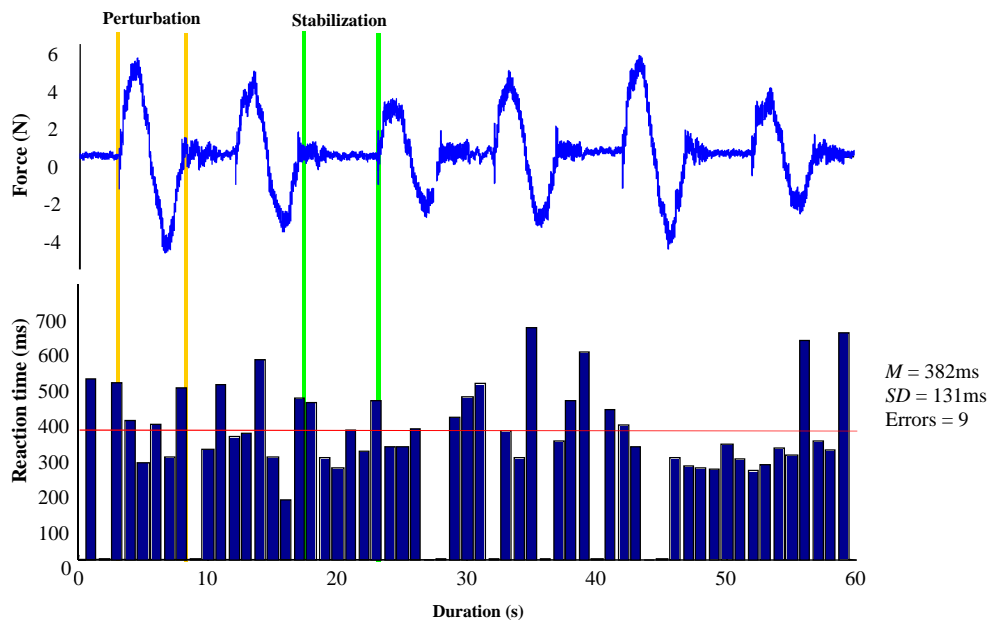

Figure 11. Time course of dual-task processing under instructional manipulations. This figure exemplifies performances of an older participant in two dual-task trials: under the instruction "Focus on RT" (upper panel) and under the instruction "Focus on Balance" (lower panel). The vertical axis represents the balance and the RT performance in terms of the amount of force (N) the participant applied in the anterior-posterior direction and reaction time (ms). The trial duration (60 s) is shown on the horizontal axis.
