

ACKNOWLEDGEMENT

I would like thank **Prof. Dr. K-H. Zessin** for his supervision, invaluable inputs in data management and final correction of the manuscript.

I am deeply indebted to **Dr. P.-H. Clausen** and **Dr. B. Bauer** for initiating my study program and time devotion in reading and correcting my work. I can only draw my hat and say “*Danke schön*”. I am also grateful to **Prof. Dr. E. Schein**, head of the Institute for Parasitology and International Animal Health, Freie Universität Berlin, where part of this work was carried out. **Dr. M. Kyule** is also highly appreciated for playing a key role in data management and analysis and review of the thesis.

I am deeply grateful to the entire **FITCA-Kenya team** and animal handlers (**Ngugi and Opicho**) without whose support, my work would not have been possible. **Florence Wamwiri** is also highly appreciated for analyzing the tsetse bloodmeals described in my work.

I owe a lot of thanks to God, my wife **Charity**, my daughters, **Rebeccah, Joy** and **Elizabeth** for their understanding and support while I was away from home. My Mother, **Rebeccah Wambui** is also highly appreciated for even when she may not have known what I was doing; she kept on urging me to fight on. Great thanks also go to my brother **Steve** and his family, my sister **Esther** and the **Precious Families** who kept my family company while I was far. Great thanks go also to the former Director of KETRI, **Dr. J.M. Ndung'u**, for his support.

I would like to thank the **Government of Kenya (KARI-TRC)** for granting me study leave and its continued support for the last three and a half years of my study.

My sincere thanks go to the **Deutscher Akademischer Austauschdienst (DAAD)** for partly supporting my stay in Germany.

Special thanks go to **AU/IBAR-Farming in Tsetse Controlled Areas (FITCA-K)** for financing both the field work and 12 months of my stay in Germany. It would not have been possible to carry out this work without their support.
