

## Text figures

Figure 1:	Fluid and solute movement in linear and concentric microdialysis probes.....	2
Figure 2:	The relationship between relative and absolute recovery as a function of flow rate.....	3
Figure 3:	Possible effect of changing the outer radius of the inner cannula of a pin probe on recovery (adapted from Torto and Wisniewski, 2002).....	4
Figure 4:	Experimental set up tubing test .....	17
Figure 5:	Experimental procedure tubing test.....	18
Figure 6:	Experimental set up microdialysis probe test.....	19
Figure 7:	Experimental procedure microdialysis probe test .....	20
Figure 8:	Schematic presentation for the calculation of the amount eluted ( $A_e$ ).....	22
Figure 9:	Graphical representation of steady-state after 4 half-lives .....	25
Figure 10:	Example data from an imaginary probe, and calculation of the %iAUD.....	26
Figure 11:	Example data from an imaginary probe, and calculation of the amount eluted ( $A_e$ ).....	28
Figure 12:	Schematic presentation of compound distribution within the microdialysis membrane at the end of each concentration phase, and calculation of $A_{bound}$ .....	29
Figure 13:	Time course of ZK 975 elution from FEP tubes after 1 hour incubation with $^{14}\text{C}$ -ZK 975, tubes rinsed overnight with Ringer's solution.....	32
Figure 14:	Time course of ZK 894 elution from FEP tubes after 1 hour incubation with $^{14}\text{C}$ -ZK 894, tubes rinsed overnight with Ringer's solution.....	32
Figure 15:	Time course of ZK 975 elution from FEP/Teflon tubes after 1 hour incubation with $^{14}\text{C}$ -ZK 975, tubes rinsed overnight with Ringer's solution.....	33
Figure 16:	Time course of ZK 894 elution from FEP/Teflon tubes after 1 hour incubation with $^{14}\text{C}$ -ZK 894, tubes rinsed overnight with Ringer's solution.....	34
Figure 17:	Time course of ZK 975 elution from PEEK tubes after 1 hour incubation with $^{14}\text{C}$ -ZK 975, tubes rinsed overnight with Ringer's solution.....	35
Figure 18:	Time course of ZK 894 elution from PEEK tubes after 1 hour incubation with $^{14}\text{C}$ -ZK 894, tubes rinsed overnight with Ringer's solution.....	35
Figure 19:	Time course of ZK 975 elution from fused silica tubes after 1 hour incubation with $^{14}\text{C}$ -ZK 975, tubes rinsed overnight with Ringer's solution.....	36
Figure 20:	Time course of ZK 894 elution from fused silica tubes after 1 hour incubation with $^{14}\text{C}$ -ZK 894, tubes rinsed overnight with Ringer's solution.....	37
Figure 21:	Time course of ZK 975 elution from silicone tubes after 1 hour incubation with $^{14}\text{C}$ -ZK 975, tubes rinsed overnight with Ringer's solution.....	38
Figure 22:	Time course of ZK 894 elution from silicone tubes after 1 hour incubation with $^{14}\text{C}$ -ZK 894, tubes rinsed overnight with Ringer's solution.....	38
Figure 23:	Mean time courses of ZK 975 elution from all tubing materials after 1 hour incubation with $^{14}\text{C}$ -ZK 975, tubes rinsed overnight with Ringer's solution.....	39
Figure 24:	Individual and mean $A_{e1.5}$ for all tubing materials tested with ZK 975 .....	40
Figure 25:	Mean time courses of ZK 894 elution from all tubing materials after 1 hour	

	incubation with <sup>14</sup> C-ZK 894, tubes rinsed overnight with Ringer's solution.....	41
Figure 26:	Individual and mean Ae <sub>1-5</sub> for all tubing materials tested with ZK 894 .....	41
Figure 27:	Individual and mean Ae <sub>1-5</sub> for all tubing materials tested with the lipophilic compound ZK 975 and the hydrophilic compound ZK 894.....	42
Figure 28:	Individual recovery-time profiles for CMA/12 (PC) probe with ZK 975 .....	45
Figure 29:	Individual recovery-time profiles for CMA/12 (PC) probe with ZK 894 .....	45
Figure 30:	Individual recovery-time profiles for MAB 2.14.4 probe with ZK 975 .....	47
Figure 31:	Individual recovery-time profiles for MAB 2.14.4 probe with ZK 894 .....	47
Figure 32:	Individual recovery-time profiles for BR-4 probe with ZK 975 .....	49
Figure 33:	Individual recovery-time profiles for BR-4 probe with ZK 894 .....	49
Figure 34:	Individual recovery-time profiles for MAB 4.15.4.Cu probe with ZK 975 .....	51
Figure 35:	Individual recovery-time profiles for MAB 4.15.4.Cu probe with ZK 894 .....	51
Figure 36:	Individual recovery-time profiles for MBR-4-10 probe with ZK 975 .....	53
Figure 37:	Individual recovery-time profiles for MBR-4-10 probe with ZK 894 .....	53
Figure 38:	Individual recovery-time profiles for CMA/12 (PES) probe with ZK 975 .....	55
Figure 39:	Individual recovery-time profiles for CMA/12 (PES) probe with ZK 894 .....	55
Figure 40:	Individual recovery-time profiles for MAB 6.14.4 probe with ZK 975 .....	57
Figure 41:	Individual recovery-time profiles for MAB 6.14.4 probe with ZK 894 .....	57
Figure 42:	Individual recovery-time profiles for MAB 9.14.4 probe with ZK 975 .....	59
Figure 43:	Individual recovery-time profiles for MAB 9.14.4 probe with ZK 894 .....	59
Figure 44:	Individual recovery-time profiles for MAB 8.4.4 probe with ZK 975 .....	61
Figure 45:	Individual recovery-time profiles for MAB 8.4.4 probe with ZK 894 .....	61
Figure 46:	Individual recovery-time profiles for MAB 4.15.4.PES probe with ZK 975 .....	63
Figure 47:	Individual recovery-time profiles for MAB 4.15.4.PES probe with ZK 894 .....	63
Figure 48:	Individual recovery-time profiles for CMA/11 probe with ZK 975 .....	65
Figure 49:	Individual recovery-time profiles for CMA/11 probe with ZK 894 .....	65
Figure 50:	Mean K versus time profiles for probes with different membrane materials tested with ZK 975 .....	67
Figure 51:	Overall Ae of different membrane materials tested with ZK 975 .....	67
Figure 52:	Mean K versus time profiles for probes with different membrane pore sizes (PES-membranes only) tested with ZK 975 .....	68
Figure 53:	Overall Ae of membranes with different pore sizes (PES-membranes) tested with ZK 975.....	69
Figure 54:	Mean K versus time profiles for probes with different membrane surface areas (6 kDa PES-membranes only) tested with ZK 975 .....	70
Figure 55:	Overall Ae of different membrane surface areas (6 kDa PES -membranes) tested with ZK 975.....	70
Figure 56:	Mean K versus time profiles for probes with different membrane thicknesses (cellulose based membranes only) tested with ZK 975.....	71

Figure 57: Overall Ae of different membrane thicknesses (cellulose based membranes) tested with ZK 975 .....	72
Figure 58: Mean K versus time profiles for probes with different outlet materials (3 mm <sup>2</sup> 6 kDa PES-membranes only) tested with ZK 975.....	73
Figure 59: Overall Ae of probes with different outlet materials (3 mm <sup>2</sup> 6 kDa PES-membranes) tested with ZK 975.....	73
Figure 60: Mean K versus time profiles for probes with different membrane materials tested with ZK 894 .....	75
Figure 61: Overall Ae of different membrane materials tested with ZK 894 .....	75
Figure 62: Mean K versus time profiles for probes with different membrane pore sizes (PES-membranes only) tested with ZK 894 .....	77
Figure 63: Overall Ae of membranes with different pore sizes (PES-membranes) tested with ZK 894.....	77
Figure 64: Mean K versus time profiles for probes with different membrane surface areas (6 kDa PES-membranes only) tested with ZK 894 .....	78
Figure 65: Overall Ae of different membrane surface areas (6 kDa PES -membranes) tested with ZK 894.....	79
Figure 66: Mean K versus time profiles for probes with different membrane thicknesses (cellulose based membranes only) tested with ZK 894.....	80
Figure 67: Overall Ae of different membrane thicknesses (cellulose based membranes) tested with ZK 894 .....	80
Figure 68: Mean K versus time profiles for probes with different outlet materials (3 mm <sup>2</sup> 6 kDa PES-membranes only) tested with ZK 894.....	81
Figure 69: Overall Ae of probes with different outlet materials (3 mm <sup>2</sup> 6 kDa PES -membranes) tested with ZK 894.....	82
Figure 70: Overview of all individual and mean %iAUD obtained with ZK 894 and ZK 975 .....	83
Figure 71: Overview of all individual and mean Ae obtained with ZK 894 and ZK 975.....	84
Figure 72: Overview of all individual and mean K obtained with ZK 894 and ZK 975 .....	85
Figure 73: Fused silica tubing ends fitted with PEEK sleeves.....	87
Figure 74: Time course of ZK 975 elution from FEP tubes after 1 hour incubation with <sup>14</sup> C-ZK 975, using new tubes taken straight from the packet.....	88
Figure 75: Time course of ZK 975 elution from FEP tubes after 1 hour incubation with <sup>14</sup> C-ZK 975, using tubes previously tested with ZK 894, and rinsed with Ringer's solution over night.....	89
Figure 76: Comparison of Ae obtained from FEP, FEP/Teflon and PEEK tubes used straight from the packet and from tubes rinsed overnight with Ringer's solution .....	89
Figure 77: Curved fluid flow through a tube .....	90
