

Appendix D

Acknowledgements

I want to thank Prof. Dr. Walter Rosenthal for the possibility to carry out this study in his department at the Leibniz-Institut für Molekulare Pharmakologie (FMP), Berlin. Moreover, I would like to thank my supervisor Dr. Enno Klussmann and Prof. Dr. Walter Rosenthal for their guidance and support, as for helpful discussions concerning this work and for the freedom to let me follow some risky ideas.

I want to thank Dr. Volker Henn for very much more besides practical guidance in the Klussmann lab, critical reading of this work and exploiting hours in the squash court.

I want to thank Angelika Ehrlich for the amiable support and the continuous flow of peptide membranes, the members of the department of Peptide Chemistry, Dr. Michael Beyermann for introducing me in the ‘do’s and don’ts’ of peptide chemistry, Dr. Margitta Dathe and Heike Nikolenko for the CD-measurements and Dagmar Krause for synthesis of the peptides. Further I want to thank Dr. Gerd Krause for the generation of the structural model and for the beneficial discussions in the field of bioinformatics. I want to thank Dr. Dorothea Lorenz for excellent electrophysiological readings and Andrea

Geelhaar for the help in cell culturing and for the preparation of IMCD-cells, Michael - cloning hero - Gomoll for support in the lab, enthusiasm and for chiving me in the squash court, Dr. 'Resi' Schweizer (née McSorley) for improving my Scottish accent, providing cardiac myocytes, critical reading of this work and for having an ear for weird ideas of mine. I want to thank Dr. 'Edi' Stefan for fruitful scientific and non-scientific discussions, great football matches - sometimes under adverse conditions - and for introducing me in the abyss of Austria. I want to thank Dr. Bayram Edemir for guiding my first practical scientific steps at the FMP and Frank Christian for scientific support and many fancy BBQ-sessions.

Many thanks to all the colleagues at the FMP, in particular the present and former members of the Klussmann lab not mentioned above, who helped with practical advice and inspiring discussions and for having loads of fun, the same to the members of the EU-project 'Anchored cAMP signalling - implications for treatment of human disease'.

Very warm thanks to my 'beast' Stö Hellwag, for being always there and for the assurance that life will never ever be dull.

In addition, I would like to thank my parents, my siblings and friends for their continuous support and I hope for forgiveness when I bombed them with cryptical terms and expressions.
