Freie Universität Berlin

**Evaluation of Methods for Detecting Endotoxin on Filters of Heating-, Ventilation- and Air-Conditioning Systems**

Inaugural-Dissertation  
zur  
Erlangung der Doktorwürde  
des Fachbereichs  
Humanmedizin  
der Freien Universität Berlin

Vorgelegt von: Rolf Schomburg  
Aus: Kiel

Referent: Professor Henning Rüden  
Korreferent: Professor Donald K. Milton, MD, DrPH

Gedruckt mit der Genehmigung des Fachbereichs Humanmedizin  
der Freien Universität Berlin

Promoviert am: 12. Dezember 2003

## CONTENTS

1	Introduction .....	9
1.1	ENDOTOXIN .....	9
1.1.1	Endotoxin in Clinical Medicine.....	10
1.1.2	Endotoxin in the Environment.....	10
1.1.3	Endotoxin and Sick Building Syndrome .....	10
1.2	MEASUREMENT OF ENDOTOXIN.....	10
1.2.1	Rabbit Test.....	11
1.2.2	GCMS .....	11
1.2.3	The Limulus Amebocyte Lysate Test.....	11
1.2.3.1	Gel-Clot Method .....	11
1.2.3.2	Chromogenic Test .....	12
1.2.3.2.1	Chromogenic Endpoint Test.....	13
1.2.3.2.2	Kinetic Chromogenic Test .....	13
1.2.3.3	Enhancement and Inhibition of the Test .....	13
1.2.3.3.1	Determination of Influencing Factors .....	13
1.2.3.3.1.1	Spiking .....	14
1.2.3.3.1.2	Serial dilution method .....	14
1.2.3.3.2	Overcoming the Dilution Dependent Inhibition or Enhancement .....	14
1.2.3.3.3	Overcome Dilution Independent Inhibition or Enhancement .....	14
1.3	STUDY AIMS .....	14
2	Material and Methods .....	15
2.1	MAIN INVESTIGATIONS.....	15
2.1.1	Determination of Endotoxin .....	15
2.1.1.1	Reagents of the Assay Kit .....	15
2.1.1.1.1	Kinetic-QCL Reagent.....	15
2.1.1.1.2	LPS (Escherichia coli 055:B5 Endotoxin) .....	15
2.1.1.1.3	LAL Reagent Water .....	15
2.1.1.2	Assay Procedure .....	15
2.1.1.2.1	Standard Curve .....	16
2.1.1.2.2	Detection of Inhibition or Enhancement .....	16
2.1.1.2.3	Microplate .....	17
2.1.2	Filter Material .....	18
2.1.3	Solutions .....	18
2.1.3.1	Water .....	18
2.1.3.2	Solutions Containing Endotoxin for Contamination of HVAC Filters .....	19
2.1.3.2.1	LPS Solution .....	19
2.1.3.2.2	Suspension Containing <i>Pseudomonas aeruginosa</i> .....	19
2.1.3.2.3	Suspension Containing Escherichia coli .....	19
2.1.3.2.4	Suspension Containing Dust .....	20
2.1.3.3	Extraction Media .....	20
2.1.3.3.1	TAP Buffer .....	20
2.1.3.3.2	Tween 20 Solution .....	20
2.1.4	Physical Contamination and Extraction Procedure .....	21
2.1.5	Handling of Extraction .....	22
2.1.5.1	Timetable of Main Investigations .....	23
2.1.5.2	Quality Control.....	26

2.1.6	Depyrogenization.....	26
2.1.7	Other needed Materials.....	27
2.1.7.1	Disposable Materials.....	27
2.1.7.2	Non-disposable Materials.....	27
2.1.8	Statistical Analysis.....	28
2.1.8.1	Positive Test Tubes.....	28
2.1.8.2	Values Used for Statistical Analysis.....	29
2.2	PRELIMINARY INVESTIGATIONS.....	29
2.2.1	Investigations Done on Standard Curves.....	29
2.2.2	Improvement of Spiking.....	30
2.2.3	Tween 20 Concentration Yielding Highest LAL Activity.....	30
2.2.4	Depyrogenization.....	30
2.2.4.1	Dry Heat.....	30
2.2.4.2	Sterilization with $\gamma$ -Radiation.....	31
2.2.4.3	Depyrogenization With Dry Heat.....	31
2.2.4.4	Depyrogenization With $\gamma$ -Radiation.....	31
3	Results.....	32
3.1	MAIN INVESTIGATIONS.....	32
3.1.1	Measured Activity on Filter Pieces.....	32
3.1.2	Descriptive Statistical Analysis.....	33
3.1.2.1	Classified by Single Criterion.....	33
3.1.2.1.1	Selected Data Excluding Data for <i>Pseudomonas Aeruginosa</i> .....	34
3.1.2.1.2	Exclusive Data for <i>Pseudomonas Aeruginosa</i> Contaminated Filters.....	34
3.1.2.2	Classified by Combined Criteria.....	35
3.1.2.2.1.1	Data Obtained for Cellulose Fiber Filter.....	35
3.1.2.2.1.2	Glass Fiber Filter.....	36
3.1.2.2.1.3	Synthetic Fiber Filter.....	37
3.1.2.2.2	Data Exclusive for <i>Pseudomonas Aeruginosa</i> Contaminated Filters.....	38
3.1.3	Statistical Analysis with "Generalized Linear Models" (GLM).....	39
3.1.3.1	Statistical Analysis Excluding Data of <i>Pseudomonas Aeruginosa</i> .....	39
3.1.3.2	Statistical Analysis with Regard to the Data of <i>Pseudomonas Aeruginosa</i> .....	42
3.2	PRELIMINARY INVESTIGATIONS.....	44
3.2.1	Depyrogenisation.....	44
3.2.1.1	Dry Heat.....	44
3.2.1.1.1	Depyrogenization by Heating Challenge Vials.....	44
3.2.1.1.2	Depyrogenization by Heating Filter Material.....	45
3.2.1.2	Radiation.....	45
3.2.1.3	Depyrogenization of Challenge Vials with $^{60}\text{Cobalt}$ Radiation.....	45
3.2.1.4	Depyrogenization of Filter Material with $^{60}\text{Cobalt}$ Radiation.....	46
3.2.2	Basic Endotoxin Contamination of Filter Material.....	47
3.2.3	Extraction Media.....	48
3.2.3.1	Tween 20.....	48
3.2.4	Spiking.....	49
3.2.5	Modification of the Standard Curve.....	50
3.2.6	Observations.....	50
4	Discussion.....	51
4.1	MATERIAL UNDER INVESTIGATION.....	51
4.1.1	Depyrogenization with Dry Heat.....	51
4.1.2	Depyrogenization with Radiation.....	51

4.1.3	Determination of basic contamination.....	52
4.2	SUSPENSION FOR INOCULATION OF THE FILTERS .....	52
4.2.1	Dust Containing Liquid .....	52
4.2.2	Liquid with Bacterial Content for Inoculation .....	52
4.2.3	Liquid Containing LPS .....	53
4.3	EXTRACTION PROCEDURE .....	53
4.3.1	Tween 20 as Extraction Fluid for Amphiphilic LPS .....	56
4.3.2	TAP as Extraction Fluid .....	56
4.3.3	Shaking the Samples.....	56
4.3.4	Sonication of Samples .....	56
4.4	ASSAY WORK.....	56
4.4.1	Standard curve .....	57
4.4.2	Blinding .....	57
4.4.3	Lot of LAL Tests .....	57
4.4.4	Test for Interfering Substances.....	57
4.4.4.1	Spike Method .....	57
4.4.4.2	Serial Dilution Method.....	58
4.4.5	Interval of Measuring .....	58
4.5	LOOKING AT RAW DATA .....	59
4.6	ANALYSIS OF DATA .....	61
4.6.1	Specification of Modi .....	62
4.6.1.1	Determination of Recovery Rate.....	62
4.6.1.2	Definition of 100% Recovery .....	62
4.6.1.3	Determining the Mathematical Expression that Corresponds Closest to the study Aim .....	63
4.6.2	Descriptive Statistics .....	64
4.6.3	Generalized Linear Model.....	65
4.6.3.1	Univariate Analysis Excluding Data for <i>Pseudomonas aeruginosa</i> Contamination .....	65
4.6.3.2	Multivariate Analysis Excluding Data for <i>Pseudomonas aeruginosa</i> Contamination .....	66
4.6.3.3	Uni- and Multivariate Analysis for Filter Contamination for <i>Pseudomonas Aeruginosa</i> .....	66
4.7	ENDOTOXIN LIMITS .....	66
4.8	COSTS.....	67
4.9	CONCLUSIONS.....	67
4.9.1	Biasing Factors of the Investigation .....	67
4.9.2	Recommendations for Endotoxin Challenge Trials.....	68
4.9.2.1	General Recommendations .....	68
4.9.2.2	Special Recommendations for Filter Extraction .....	68
5	Summary.....	69
6	Appendix .....	72
6.1	TABLES.....	72
6.2	FIGURES.....	73
7	References .....	85
8	Acknowledgements .....	91
9	Curriculum Vitae .....	92

## LIST OF TABLES

Table 1-1 Different Assays with its Distinction.....	11

## 8 ACKNOWLEDGEMENTS

An dieser Stelle möchte ich Prof. Dr. med. H. Rüden (Direktor des Institutes für Hygiene der Freien Universität Berlin, Universitätsklinikum Benjamin Franklin) für die Überlassung des Themas und die großartige Unterstützung danken. Dank gilt auch Prof. Don Milton, MD, DrPH Associate Professor, „Occupational and Environmental Health Department of Environmental Health“ an der „Harvard School of Public Health“ in Boston, USA, für die angeregte Diskussion.

Meinem wissenschaftlichen Betreuer, Herrn Dr. med. K. Weist (Institutes für Hygiene der Freien Universität Berlin, Universitätsklinikum Benjamin Franklin), gilt mein besonderer Dank für sein großes Interesse und die unentwegte Hilfestellung im Rahmen der Experimente und des Schreibens der Arbeit.

Herzlich bedanken möchte ich mich bei allen, die zur Durchführung der Versuche und zum Gelingen der Arbeit beigetragen haben, so bei den technischen Mitarbeitern des Institutes, insbesondere Frau Giesela Stahmann und den interdisziplinären wissenschaftlichen Mitarbeitern. Herrn Dr. E. Dietz danke ich für die Unterstützung bei der statistischen Auswertung der Daten.

Meinen Eltern gilt mein herzlichster Dank für die großartige Unterstützung in jeder erdenklichen Hinsicht und das Vertrauen in meine Fähigkeiten.
