Summary

In anthropology, it has become axiomatic that social relationships are constructed through food practices and embodied in food. This paper suggests that both ritual and quotidian commensality have as either a goal or a consequence the construction of specific relations of sociality, and in this regard are not so different. What may distinguish these spheres of commensality, however, are the types of persons engaged in the act of shared consumption. The paper considers ritual commensality as a means of exploring the social universe and indigenous ontology of native Andean peoples, using both archaeological and ethnohistoric data. The role such commensal activities may have played in the construction of, and engagement with, other-than-human persons in the late pre-Columbian Andes is considered.

Keywords: Andean archaeology; commensality; feasting; huaca; Pre-Columbian Andes; ontology; relationality.

1 Introduction

Social theorists of different stripes have long recognized the rich webs of meaning associated with food preferences and practices.¹ From early functionalist concerns with physiology and nutrition,² to structuralist interests in the semiotics and symbolism of food,³ to more recent explorations of the power of food to shape identities, behaviors, and bonds,⁴ anthropologists have amply demonstrated that a focus on food offers insights into human social relations on many different levels. The old adage “you are what you eat” is a biological fact. But there are also social dimensions to this slogan that can be captured in the notion of “you are *how* you eat,” as well as in relation to “with *whom* you eat.” What, how, and with whom we eat are among the most fundamental ways that humans define themselves as social beings and as members of a specific group.

In this paper I explore the analytical utility of commensality – the question of with whom one eats – for garnering insights into the social universes of non-western peoples. Specifically, I am interested in approaching ritual commensality as a method for ascertaining the kinds of persons with whom it is or was possible to establish social relations via shared consumption. My thesis is that both ritual and quotidian commensality have as either a goal or a consequence the construction of specific relations of sociality, and in this regard are not so different. What may distinguish these two spheres, however, are the types of persons engaged in the act of shared consumption.

If, for instance, everyday commensality is understood to produce and re-produce social relations among kin,⁵ we might posit that ritual commensality serves as a means of constituting social relations with extra-familial others – a process which (not coincidentally) constitutes such others as social beings. Along these lines, I suggest that an investigation of ritual commensality may offer a window onto ontological systems distinct from our own in which other-than-human persons might conceivably exist who would be identifiable via the activities or remains of ritual commensality. In other words, if evidence of commensal activity (to be discussed below) was found in association with non-human entities or phenomena in such a way as to suggest intentional inclusion in

⁵ E. g., Anigbo 1987; Weismanel 1988.
acts of food-sharing, this may be construed as a sign that such entities were recognized as possessing the ability to participate in the social realm and were purposefully engaged in such. In this capacity such entities might be described as ‘non-human persons.’ I will investigate this proposition in the local historical context of the late pre-Columbian Andes using both archaeological and ethnohistoric evidence.

2 Theoretical Concepts

Before proceeding to the Andes and a consideration of alternative ontologies, I want to offer a few general comments and points of clarification with regard to some of the concepts I will be using in this paper. First, with respect to the relationship between commensality, ritual, and feasts versus quotidian meals, I think it is worthwhile to revisit some basic definitions. “Commensal” literally refers to the partaking of food and drink at the same table. The concept of “ritual” involves elements of repetition, formality, and prescriptive behavior. While ritual may imply some degree of ceremony or sacredness, it can just as commonly refer to the enactment of routine behavior in the secular realm. In other words, both regular daily meals and extraordinary commensal events can and typically do have a ritual aspect about them. The notion of “ritual commensality” therefore may not be sufficiently clear to capture the distinction intended.

Dietler explicitly defined feasting as “a form of public ritual activity centered around the communal consumption of food and drink.” The broader, public, and communal context of such commensal events was clearly critical to his understanding of feasts as significant arenas of political and social action. But as he also noted, “identifying feasts as ritual activity does not mean that they are necessarily highly elaborate ceremonies” or “sacred” in character. Rather, “the defining criterion of rituals is that they are in some way symbolically differentiated from everyday activities in terms of forms of action or purpose.” In the case of ritual commensality, the task of demarcation is often accomplished through the inclusion of dramaturgical elements such as singing, dancing, oratory, and inebriation – features that help to underscore the extraordinary nature of the event.

The purpose of feasts, again according to Dietler, is typically distinct from quotidian meals, as well, insofar they are often intended to “mark, reify, and inculcate diacritical differences between social groups, categories, and statuses while at the same time establish relationships across the boundaries that they define.” In this way, feasts, as with other types of rituals, can be understood to provide a critical context for the construction and

7 Dietler 2001, 66.  
8 Dietler 2001, 67.  
maintenance of social and political relations. These various aspects of feasting, or ritual
commensality – that is, the extraordinary, public, relational, and dramaturgical features
of the event, are what I take as the key ingredients in the present study.

I turn now to the other main elements in the title of my paper. These include the
notion of personhood, the concept of other-than-human persons, and ideas about alterna-
tive (non-western) ontologies. Much of the current theoretical work on personhood
that involves a concern with agency and materiality takes as its starting point the in-
fluential writings of Alfred Gell.\textsuperscript{10} In thinking through how things may be construed
as persons, Gell developed a sophisticated conceptual framework outlining the way in
which objects, much like people, come to possess social agency. When objects or places
participate in human affairs, or when, following Gell,\textsuperscript{11} they become “targets for and
sources of social agency,” they must, he argues, be treated as person-like, or alternatively,
as “other-than-human persons” – to use Irving Hallowell’s earlier construction.\textsuperscript{12} Social
agency is thus understood not in terms of biological attributes but rather relationally.
Within this framework, it does not matter what a thing or a person “is” in itself – what
matters is where it stands in a network of social relations.\textsuperscript{13} That is, the nature of some-
thing is seen to be a function of the social-relational matrix within which it is embed-
ded.\textsuperscript{14} Equally important is the conditional and transactional nature of the relationship
between human and non-human persons (or “patients” and “agents,” to use Gell’s termin-
ology), each being necessarily constitutive of the other’s agency at different moments
in time.\textsuperscript{15}

The obvious question here is whether and how we might identify “persons” of the
other-than-human variety – which might in turn shed light on alternative ways of under-
standing the nature of being in the world – archaeologically. In order to explore these
ideas in a more grounded fashion, I situate this inquiry in the context of the late pre-
Columbian Andes.

3 Ethnohistoric Information

Early ethnohistoric information from the Andes provides ample cause for positing the
existence of a native ontology distinct from that of Christendom and sixteenth-century
Europe. The earliest Spanish reports of first encounters with native Andean peoples ren-
der a sense of the profound strangeness experienced by the European invaders. The alien
character of this new world can be detected in comments such as those of Pizarro’s secre-
tary, Miguel de Estete regarding the “filthy wooden pole” worshiped as the great oracle

\textsuperscript{10} Gell 1992; Gell 1996; Gell 1998.
\textsuperscript{11} Gell 1998, 96.
\textsuperscript{12} Hallowell 1960.
\textsuperscript{13} Gell 1998, 123.

\textsuperscript{15} Gell 1998, 22.
ritual commensality between human and non-human persons of Pachacamac,\(^\text{16}\) or the reported wedding of a young girl to a sacred blue stone “no bigger than the size of one’s palm,”\(^\text{17}\) or the confession that a ceramic pot dressed in female garb was venerated as the ancestor of a particular community.\(^\text{18}\) Such observations suggest a radically different understanding of the nature and categories of being on the part of native peoples in the Andes relative to the European invaders.

One of the key words brought forward in the early written sources relevant to an exploration of Andean ontology is “huaca.” Garcilaso de la Vega – who was the son of an Inca nobelwoman and a Spanish soldier writing at the beginning of the 17th century – attempted to convey the meaning of this word by enumerating the kinds of things called “huaca” by native peoples.\(^\text{19}\) He initiates this discussion by stating that huaca referred to a “sacred thing,” be it idol, object, or place, through which “the devil spoke.”\(^\text{20}\) His list included “… rocks, great stones or trees,” as well as things made, such as “figures of men, birds, and animals” offered to the Sun, as well as places built, such as “any temple, large or small, … sepulchers set up in the fields, … and corners of houses.” It also included things of extraordinary beauty or ugliness, exceptional phenomena – such as twins or a six-fingered hand, and the ancestors. After enumerating the range of things encompassed by the term, Garcilaso went on to state that the Inca called them huaca “not because they held them as gods or because they worshiped them but rather for the particular advantage they provided the community.”\(^\text{21}\)

This is an important point to which I return later.

Another 17th century writer, the Jesuit priest Bernabe Cobo, suggested that huacas, could be divided into two categories:\(^\text{22}\) works of nature unaltered by human intervention, and “idols that did not represent anything other than the material from which they were produced …” He goes on to note that “all of these idols were worshiped for their own sake, and [that] these people never thought to search or use their imaginations in order to find what such idols represented.”\(^\text{23}\) Cobo seems to suggest here that native people understood huacas as powerful entities in and of themselves – not as the houses or seats of unearthly or supernatural beings, but rather as efficacious agents in their own right with power to affect the world. While huacas have traditionally been construed as “sacred,” they do not seem to be the kind of “abstract sacred” that characterizes the western meaning of the term.\(^\text{24}\)

Andean huacas were very much concrete, material things, not bodiless, abstract notions. I suggest that it was the physical concreteness of the huacas – their materiality – that enabled them to be both powerful and efficacious in the world,

and, equally importantly, that enabled their participation in the network of relations comprising the social world and lives of Andean peoples.

3.1 Huacas as Non-Human Persons

There are various indications throughout the ethnohistoric record that native Andean peoples understood huacas to be persons. For instance, huacas often shared kin relations with members of the communities with whom they were associated. There are various reports, for example, of young women being wed to local huacas made of stone; elsewhere huacas were said to have sons and daughters who were typically identified as the mummified remains of revered community ancestors; in other cases, huacas were known to be siblings, as in the example of Guanacauri, a stone pillar on a hill that was the principal huaca of Cuzco who was called the brother of Manco Capac, the first Inca king. Huacas were also quite often named, had personal biographies, were said to speak and hear, and, in quintessential Andean fashion, were often clothed or dressed in woven garments – all signs indicative of their personhood.

In an in-depth analysis of the Huarochiri manuscript – which is a document written in Quechua circa 1598 containing important insights into native religion – one of its principal interpreters was led to conclude that huacas were clearly living beings: “persons in fact.” I would suggest, though, that we are not talking here about “persons” in the familiar sense of western individualism but rather in the relational sense discussed above. Within this relational framework, “persons” are seen as multi-authored, plural entities defined on the basis of what they do rather than how they appear, conformed of their various interactions within a kaleidoscopic field of social relations involving humans, animals, things, and places. From this perspective, social relations can be understood to provide the grounds for and the context within which persons take (temporary) shape. Given all this, it seems reasonable to suggest that a key to the recognition of “persons” within a given cultural milieu would be the identification of involvement in relations of sociality. This is where I return to the subject of ritual commensality.

3.2 Ritual Commensality and Huacas

The ethnohistoric (and ethnographic) data from the Andes provide sufficient grounds to hypothesize that the social world of pre-Columbian peoples encompassed powerful, other-than-human persons. How might we go about testing this proposal archae-
ologically? One way, I would suggest, is to look for evidence of social relationships as traditionally constructed via commensality and the exchange of gifts. Where and with whom were commensal relations established beyond the domestic context? What food stuffs were shared and how were they consumed? Evidence of ritual commensality in the archaeological record could be expected to provide insight into who was or could be included in the social universe of a given community or ethnic group. The identification of such relations would, theoretically, inform upon indigenous notions of personhood; local systems of classification and taxonomy; and, perhaps, offer a window into other ways of understanding being in the world, e.g., alternative ontologies. In the case of the pre-Columbian Andes, it is clear that not every rock, tree, or mountain was considered a *huaca*—that is, superlative in its class, possessed of special power, and as being a non-human person. Recognizing which entities were so construed, however, via, for instance, evidence of ritual commensality would provide deeper insight into our understandings of the archaeological landscape, community boundaries, and the social relational universe of Andean peoples.

As outlined above, the ethnohistoric data provide good reason to suspect that native Andean ontology differed significantly from the western European model at the time of contact, and we might be inclined to take it or leave it at that. But I suggest that the archaeological evidence can also shed light on these very interesting questions independently of the ethnohistoric record. In what follows, I will offer a few examples of how the “archaeology of commensality” might help identify the existence of non-human persons and further our understanding of alternative ontologies in the Andean context.

Recent investigations at several important late prehistoric period sites in different parts of the Andes have either targeted or accidently encountered features that have been interpreted as *huacas*. The archaeological material found in association with these lends itself to an interpretation of ritual commensality. The first example is found at the site of Pueblo Viejo, located in the lower Lurin Valley of the south-central coast of Peru. This site was occupied during the period of Inca expansion from approximately AD 1470–1533.30 Here Peruvian scholars recorded a large modified rock outcrop on a hilltop near an important residential compound interpreted as being that of a local lord.31 Excavations in this sector revealed that the outcrop contained a number of carved niches and was surrounded by a low wall (Figs. 1–2). Inside the enclosure, excavators uncovered significant quantities of broken cooking vessels, large-sized serving jars, and individually-sized plates and bowls. They also recorded several concentrations of disarticulated llama bones and ash; numerous worked and broken pieces of spondylus shell; a few small metal items; and a small stone effigy (*conopa*) in the shape of a corncob (*zaramama*).32 The assemblage readily lends itself to an interpretation of feasting activity con-

ducted in very close proximity to a significant natural feature that I would not hesitate to identify as a *huaca*. The presence of cooking and serving vessels around the modified outcrop, the evidence for cooking fires, and the finds of camelid bone indicative of meat consumption strongly suggest that this was a site of ritual commensal activities. I would posit that these activities were conducted at this location for the specific purpose of including the *huaca* in the affair, thus recognizing its “personhood” and forging or reaffirming its relationship to the local community.

In another example, archaeologists working at Choquepukio, a late intermediate period site in the Cuzco valley in the south-central highlands of Peru, uncovered a large stone outcrop in a restricted-access structure in one sector of the site.\(^{33}\) On the south side of this outcrop, which the investigators refer to as a *huaca*,\(^{34}\) was a small, stone-lined well connected to a covered canal (Fig. 3). The floor of the patio surrounding the outcrop produced large quantities of polychrome pottery that the investigators described as “banquet wares.” Large-sized serving containers as well as individual-sized vessels were reportedly found in similar proportions in the structure. The vessel types comprising the assemblage included both Lucre and Killke style face-neck jars, cooking pots, serving plates, and drinking cups and bowls. The investigators also recorded a number of

\(^{34}\) McEwan, Gibaja, and Chatfield 2005, 266.
special artifacts including several metal objects; turquoise and shell beads; fragments of gold laminate; six small silver discs; and a carved bone spoon that were found in association with the raised platforms located around the interior perimeter of the room.\textsuperscript{35} Again the researchers interpreted the archaeological remains as evidence of ritual activities involving feasting. The fact that such ritual commensal activity was conducted in the presence of a large and specially demarcated lithomorph would again suggest that the intent was to include this \textit{huaca} in the act of food sharing and consumption – arguably as a means of recognizing its status as an other-than-human person whose membership within the community was important enough to denote through commensal acts involving elite members of the society.

\textsuperscript{35} McEwan, Gibaja, and Chatfield 2005, 266.
In other parts of the Andes, upright monoliths, sometimes demarcated by stone platforms or other enclosures, were also clearly recognized as huacas (Fig. 4). Various such monoliths located throughout the Callejon de Huaylas region of the central highlands of Peru are identified still today by local communities as sacred sites. In a recent survey of the region, limited test excavations were conducted adjacent to one of these monoliths. The 1 × 2 meter excavation unit reportedly produced dense quantities of undecorated domestic pottery, together with camelid, deer, and cuy (guinea pig) bones. These materials were interpreted as evidence of large-scale feasting carried out in direct association with the huaca.

Further to the north, at the important late period site of Tucume on the Peruvian coast, excavators uncovered a small structure with a large, deeply embedded monolith in the center (Fig. 5). The building was subsequently designated the Temple of the Sacred Stone. Numerous offerings were found in pits located directly below and in front of the stone huaca consisting principally of spondylus shell and miniature representations of objects such as pottery vessels, corn, plants, birds, fish, jewelry, tools, and musical instruments all produced in sheet metal. The researchers describe in particular a series of miniature metal vessels consisting of a double-spout and bridge bottle, a high neck jar, and two plates. Such items, I would suggest, could all be construed as accoutrements of ritual feasting rendered particularly fit for an extraordinary personage through their miniaturization and their production in precious metal.

I offer one final example from the northern highlands. In late pre-Columbian times, one of the most renowned deities of the Andean realm was the powerful oracle known as Catequil. Archaeological excavations recently undertaken in the vicinity of the mountain traditionally associated with this oracular huaca (Cerro Icchal) have produced significant architectural remains. At one of the artificial mounds situated near the base of this mountain, an architectural complex interpreted as the main sanctuary of the oracle Catequil was unearthed with a network of associated canals and drains, and a patio made of river rolled cobbles. On another mound located slightly below this and dating to the earlier Middle Horizon period, investigators recovered quantities of fine Cajamarca cursive style pottery bowls.

Analysis of organic residue adhering to the interior of some of these bowls indicated the presence of corn starch (sometimes accompanied by maize pericarps), an unidenti-
fied tuber starch, and mammal hair. The presence of red ochre was also detected in several examples. In addition to the pottery, numerous fragments of poorly preserved camelid and deer bone were also recovered, as well as various groundstone tools, including concave metates used for the grinding of maize, manos, and a single stone pestle.\footnote{J. Topic, T. Topic, and Melly Cava 2002, 317–318.} On the basis of these materials and the context of the finds, the researchers concluded that significant food preparation and consumption activities had taken place at the site and that these feasting activities were likely associated with the cult of Catequil. I would suggest that the commensal events that occurred here were held specifically to include the mountain itself, which was the material manifestation of the \textit{huaca} Catequil.

\section*{4 Concluding Thoughts}

A century of anthropological research provides clear indication that commensality is an arena in which social relationships are produced and re-produced.\footnote{Mintz and Du Bois 2002.} One way we might consider approaching commensality, then, is as a practice aimed at the construction of social bonds and networks, with all the attendant benefits and obligations implied in such. If everyday commensality solidifies social relationships internally within the domestic or consanguinal sphere, then we might understand ritual commensality as a strategy aimed at establishing social relationships in the external or affinal realm. In other words, we might approach ritual commensality as a mechanism for bringing others into one’s own social order, in this way and through this process, making them into social beings and true persons.

In this paper, I focused on ritual commensality as a way of considering what kinds of beings might be included within the social universe of non-western, pre-Columbian peoples in the Andes. A number of examples were presented in which archaeological evidence for commensality was found in association with significant rocks and rock outcrops interpreted as \textit{huacas}. The food-related evidence was construed as pertaining to the ritual sphere due to the non-domestic context of the finds, the special kinds and quantities of foodstuffs involved, and the seemingly large-scale and public nature of the activities. Foodstuffs, including meat (e.g., camelid, deer, and \textit{cuy}), corn, cornmeal (\textit{sanku}), and corn beer (\textit{chicha}), as well as the containers and vessels in which these items were prepared and served, were among the most significant components of the archaeological assemblage at several recently identified \textit{huaca} sites. The data suggest that ritual commensality may have been an important way of recognizing and interacting with significant non-human entities as members of the humanly constructed social universe. While in some instances the archaeological remains might be construed as one-way offerings, in
many other cases, there was clear evidence of shared ritual consumption among large numbers of participants at these sites. The archaeological evidence for ritual commensality found in association with huacas provides support for the conjecture that such entities were understood as non-human persons.

Various ethnographic studies in the Andes have shown that for indigenous peoples, “all material things (including things we normally call inanimate) are potentially active agents in human affairs.”43 This would suggest that native Andean people operated with a radically different set of ontological premises than those that dominate western thinking. The archaeological data presented in this study offers further insight into and support for this proposition.
