1	INTRODUCTION.....	1
1.1	Aims of this project	1
1.2	Current knowledge of the molecular basis of APEC pathogenicity	3
1.2.1	Type 1 fimbriae	3
1.2.2	P fimbriae	4
1.2.3	Iron uptake systems	6
1.2.4	Tsh protein.....	7
1.2.5	K1 capsule	8
1.2.6	Lipopolysaccharide (LPS).....	9
1.2.7	Resistance to the bactericidal effects of serum.....	10
1.2.8	Toxins and cytotoxins.....	11
1.2.9	Molecular techniques applied for identification of virulence-associated genes in APEC.....	12
1.3	Strategies for the identification of novel virulence factors	13
1.3.1	Signature-tagged transposon mutagenesis (STM).....	13
1.3.2	In vivo expression technology (IVET)	16
1.3.3	Selective capture of transcribed sequences (SCOTS)	19
1.3.4	Genome analysis and mapping by in vitro transposition (GAMBIT)	20
1.3.5	DNA microassays	21
1.3.6	In vivo inducible antigen technology (IVIAT).....	23
1.3.7	Proteome analysis.....	25
2	MATERIALS	27
2.1	Animals.....	27

2.2	Bacterial strains and plasmids	27
2.3	Chemicals	28
2.4	Nutrition medium	29
2.5	Solutions	31
2.5.1	Solutions used for agarose gel electrophoresis	31
2.5.2	Solutions used for SDS-Polyacrylamid gelectrophoresis (SDS-PAGE).....	32
2.5.3	Solutions used for Polymerase chain reaction (PCR)	33
2.5.4	Solutions used for Southern-Blotting.....	34
2.5.5	Solutions used for DNA isolation	35
2.5.6	Solutions used for DNA-DNA Hybridization.....	36
2.5.7	Solutions used for ligation.....	38
2.5.8	Solutions used for the Restriction digestion of DNA.....	38
2.6	Oligonucleotide-Primers.....	39
3	METHODS	41
3.1	Cloning and propagation DNA in <i>E. coli</i>	41
3.1.1	Bacterial culture	41
3.1.2	Glycerol stocks.....	41
3.1.3	Preparation of competent cells.....	41
3.1.4	Transformation of competent <i>E. coli</i>	42
3.2	Plasmid isolation from <i>E. coli</i>.....	42
3.2.1	Mini-prep plasmid isolation	42
3.2.2	Preparation of plasmid DNA by lysis with SDS	42
3.3	Isolation of genomic DNA.....	43
3.4	DNA analysis.....	44

3.4.1	DNA purification through phenol extraction and ethanol precipitation.....	44
3.4.2	DNA quantification	44
3.4.3	Agarose gel electrophoresis.....	44
3.4.4	DNA extraction	45
3.4.5	DNA digestion.....	45
3.4.6	DNA dephosphorylation.....	45
3.4.7	DNA ligation	46
3.5	Polymerase Chain Reactions (PCR)	46
3.6	DNA labelling.....	47
3.7	Southern blotting.....	47
3.7.1	DNA transfer	47
3.7.2	Hybridization of oligonucleotides	48
3.7.3	Visual evaluation	48
3.8	Selection of the tags and construction of the APEC mutant library	48
3.9	Probe labelling and hybridizations for identification of mutants disappeared from recovered pools	49
3.10	Identification of transposon insertion sites and sequence analyses	50
3.11	LPS analysis	52
3.11.1	LPS isolation	52
3.11.2	SDS-polyacrylamide gel electrophoresis (SDS-Page)	52
3.11.3	Silver staining.....	53
3.12	Infection study	53
3.12.1	Establishment of a chicken infection model.....	53
3.12.2	Screening of the mutant bank	54
3.12.3	In vivo and in vitro competition assay.....	54

4	RESULTS.....	56
4.1	Establishment of a chicken infection model.....	56
4.1.1	Clinical findings	56
4.1.2	Pathological findings.....	56
4.1.3	Systemic spread of infection	58
4.2	Establishment of a STM-mutant bank.....	60
4.2.1	Prescreening of 96 transposons with unique tags.....	60
4.2.2	Improvements for non radioactive use	62
4.2.3	Cross-hybridization among selected tags.....	64
4.2.4	Construction of the mutant library	65
4.3	Screening of the APEC STM bank in the chicken infection model.....	66
4.4	Confirmation of the attenuation for STM mutants.....	68
4.5	Determination of the insertion site of the transposon.....	70
4.5.1	Arbitrary PCR	70
4.5.2	Cloning.....	70
4.5.3	Identification of the disrupted loci.....	73
4.6	In vitro and in vivo competition assay.....	76
4.7	Detection of metV associated sequences in IMT5155	78
4.8	LPS expression analysis	79
5	DISCUSSION	81
5.1	Establishment of a chicken model of <i>E. coli</i>-septicemia	81
5.2	Using signature-tagged transposon mutagenesis to identify critical genes for chicken <i>E. coli</i>-septicemia.....	82

5.2.1	Improvements for nonradioactive screening	84
5.2.2	Generation and characterization of the mutant bank	84
5.2.3	Screening of the mutant bank in a chicken model.....	85
5.2.4	Determination of the insertion site of the transposon.....	87
5.2.5	Molecular characterization of the disrupted genes	88
5.2.5.1	Synthesis of different types of exopolysaccharides is necessary for APEC virulence.....	88
5.2.5.2	Lipopolysaccharide (LPS) contributes to viability of APEC in chickens ...	89
5.2.5.3	Several iron uptake systems ensure bacterial survival in different host environments	91
5.2.5.4	Membrane and periplasmic proteins contribute to the virulence of APEC	92
5.2.5.5	The ability to synthesize certain metabolic enzymes may be required for pathogenesis of colisepticemia.....	93
5.2.5.6	Identification of a putative new pathogenicity island.....	94
5.2.5.7	Other mutants	95
5.2.6	Conclusion.....	95
6	SUMMARY.....	98
7	ZUSAMMEFASSUNG.....	100
8	REFERENCES.....	103
