

**Technology development for Oligonucleotide Fingerprinting:
applying multiplexed PNA hybridizations and
MALDI-TOF mass spectrometry detection**

Inaugural-Dissertation

zur Erlangung des akademischen Grades
"Doktor der Naturwissenschaften (Dr. rer. nat.)"
am Fachbereich Biologie - Chemie - Pharmazie
der Freien Universität Berlin

vorgelegt von
Oliver Bauer
aus Berlin, Deutschland

Berlin
Mai 2003

Diese Arbeit wurde am Max-Planck-Institut für Molekulare Genetik, Berlin, Deutschland, in der Zeit von Juni 2000 bis Mai 2003 in der Arbeitsgruppe „Oligonukleotid-Fingerprinting“ der Abteilung von Prof. Dr. Hans Lehrach durchgeführt. Der Verfasser versichert, die vorliegende Arbeit eigenständig durchgeführt und alle verwendeten Hilfsmittel angegeben zu haben.

1. Gutachter: Prof. Dr. Hans Lehrach
2. Gutachter: Prof. Dr. Burghardt Wittig

Ort und Tag der Disputation: Berlin, 16.12.2003

*To my dear wife Claudia
For all your love, support and belief in me*

Acknowledgements

In the first place I particularly thank Prof. Dr. Hans Lehrach for having given me the opportunity to work on this challenging and exciting project, for his advice and for reviewing this thesis.

I also thank Prof. Dr. Burghardt Wittig for reviewing this thesis.

I am exceptionally grateful to Drs. Uwe Radelof and Michal Janitz for all their encouragement, advice and inspiring discussions as well as the open and independent working environment I could enjoy.

For their manifold support and the successful and stimulating team work I should like to express my deep gratitude to Sabine Thamm, Dr. Anna Guerasimova and Beatrix Röhrdanz.

I am indebted to Drs. Sascha Sauer, Johan Gobom, and Klaus-Dieter Klöppel for their contribution to the mass spectrometric part of this project, to Dr. Florian Wagner for providing excellent DNA microarraying resources and valuable help and to Dr. Matthias Steinfath for his invaluable bioinformatics support.

I am also grateful to my colleagues of the oligonucleotide fingerprinting group for the warm and friendly working atmosphere and to all others I could not mention in this place for their diverse assistance.

My special thanks to my dear family and friends for continuous encouragement and mental support.

This work was supported by the Bundesministerium für Bildung und Forschung (BMBF) in the course of the 2nd phase of the German Human Genome Project (DHGP).

Contents

1. Summary	1
2. Zusammenfassung	2
3. Introduction	4
3.1 General introduction	4
3.2 Sequencing by hybridization	4
3.3 Oligonucleotide fingerprinting	6
3.3.1 The principle of oligonucleotide fingerprinting	6
3.3.2 Applications of oligonucleotide fingerprinting	8
3.3.3 Assessment of normalization quality	9
3.3.4 Drawbacks of the current process	9
3.4 MALDI-TOF mass spectrometry	11
3.5 Peptide nucleic acids as hybridization probes	13
3.6 A brief introduction to DNA microarrays	15
4. Objective of this dissertation	17
5. Materials	19
5.1 Laboratory equipment	19
5.2 Chemicals	20
5.3 Kits	22
5.4 Enzymes	22
5.5 Molecular weight markers	22
5.6 DNA oligonucleotides	23
5.7 PNA oligonucleotides	23
5.8 Buffers, solutions, and media	27
6. Methods	30
6.1 Clone selection, experimental handling and storage	30
6.1.1 Genomic DNA clones	30
6.1.2 cDNA clones	30
6.2 DNA plasmid isolation	31
6.3 Polymerase Chain Reaction	31

6.4	Purification of PCR products _____	32
6.5	Agarose gel electrophoresis _____	32
6.6	Photometric determination of nucleic acid concentration _____	32
6.6.1	DNA _____	32
6.6.2	PNA _____	33
6.7	DNA sequence verification _____	33
6.8	Experimental handling of PNA _____	34
6.8.1	Generation of PNA oligonucleotide sets for OFP _____	34
6.8.2	Charge-tagging of PNA _____	34
6.8.3	Hybridization of PNA _____	35
6.8.3.1	Tube format _____	35
6.8.3.2	Slide format _____	35
6.9	Analysis of pure PNA and PNA hybridizations by MALDI-TOF MS _____	36
6.9.1	Sample preparation _____	36
6.9.2	Signal acquisition _____	37
6.10	Data analysis _____	37
6.10.1	Visualization and quality verification _____	37
6.10.2	Processing _____	37
6.10.3	Pearson correlation _____	38
6.11	Fabrication and use of DNA microarrays _____	38
6.11.1	Spotting and processing _____	38
6.11.2	Fluorescent DNA hybridization and detection _____	39
7.	Results _____	40
7.1	Characteristics of PNA hybridizations and MALDI-TOF MS based PNA detection _____	40
7.1.1	Significance of probe length _____	40
7.1.2	Influence of PNA modifications on hybridization and MALDI-TOF MS detection _____	43
7.1.3	Determination of total probe number and creation of PNA sets _____	44
7.2	Impact of different parameters on PNA hybridization _____	46
7.2.1	Influence of probe and target DNA concentration _____	46
7.2.2	Influence of additives and temperature _____	49
7.3	Multiplexed OFP analysis of selected clones of known sequence _____	52
7.3.1	Analysis of genomic DNA clones _____	52
7.3.2	Analysis of cDNA clones _____	57

7.4	Evaluation of potential DNA immobilization systems for direct hybridization read-out by MALDI-TOF MS	61
7.4.1	Promising surfaces and attachment chemistries	62
7.4.1.1	Acrylamide-based immobilization system	62
7.4.1.2	Streptavidin-based immobilization system	63
7.4.1.3	Nylon-based immobilization system	64
7.4.1.4	Dendritic immobilization system	66
7.4.2	Comparison of DNA immobilization systems	67
8.	Discussion	71
8.1	Parameters of multiplexed PNA hybridizations and subsequent MALDI-TOF MS detection	71
8.2	Multiplexed oligonucleotide fingerprinting pilot study	77
8.3	Potential MALDI-TOF MS compatible DNA immobilization systems	79
8.4	Outlook	81
9.	Appendix	83
9.1	References	83
9.2	Index of figures/tables	94
9.3	Abbreviations	96
9.4	Curriculum Vitae	98
9.5	Publications	99
9.5.1	Articles/Book chapters	99
9.5.2	Poster presentations	99
