

Acknowledgements:

First and foremost, I would like to thank Prof. Menzel for inviting me to Berlin as a guest scientist and later including me in the PhD program funded by Graduate College: “Functional Insect Science”. Throughout my PhD he has been constantly motivating me with his wonderful ideas and fruitful suggestions. His lead-by-example and aggressive science attitude had a great impact on me.

I thank Ryuichi for teaching me the art of electrophysiology and his other excellent techniques. Bernhard provided me with the opportunity to do behavior with bees in my first year and this proved to be successful leading to a publication (Chapter 1). I thank everyone from AG Menzel and AG Pflüger for being nice and providing help when required. Also, I gained a lot from Monday meetings and journal clubs. I thank the people from my Graduate College for making some events memorable and Prof. Walz has been generous in providing help.

Special thanks to Anja, Claudia, Nico, Melanie, Adam, Martin, Nobu, Lisa, Doreen, Gerard, Tim, Doro, Bernd, Björn, Silke, Fernando and Frank. Also, I thank organizers of Tea-time, Summer fest, Christmas fest very much.

Sabine Funke and Mary Wurm helped me with my administrative hitches. Mary also helped me with books and with translation of German forms. I thank Gisela for help with some techniques and instruments. I also thank Peter and Koppitz for their help.

I thank my family for providing me with excellent education and supporting me throughout my PhD. Divi has been a great friend who believed in me and has been a great motivation in my life.

I thank my friends from studentendorf: Lekha, Stefan, Katja, Andi, Meena, Chenna, Ajay, Raha and Martino.

Of course, I thank my second home Berlin, for its great culture and entertainment. And lastly, my luck, which has been extremely good so far.
