

9. Appendix

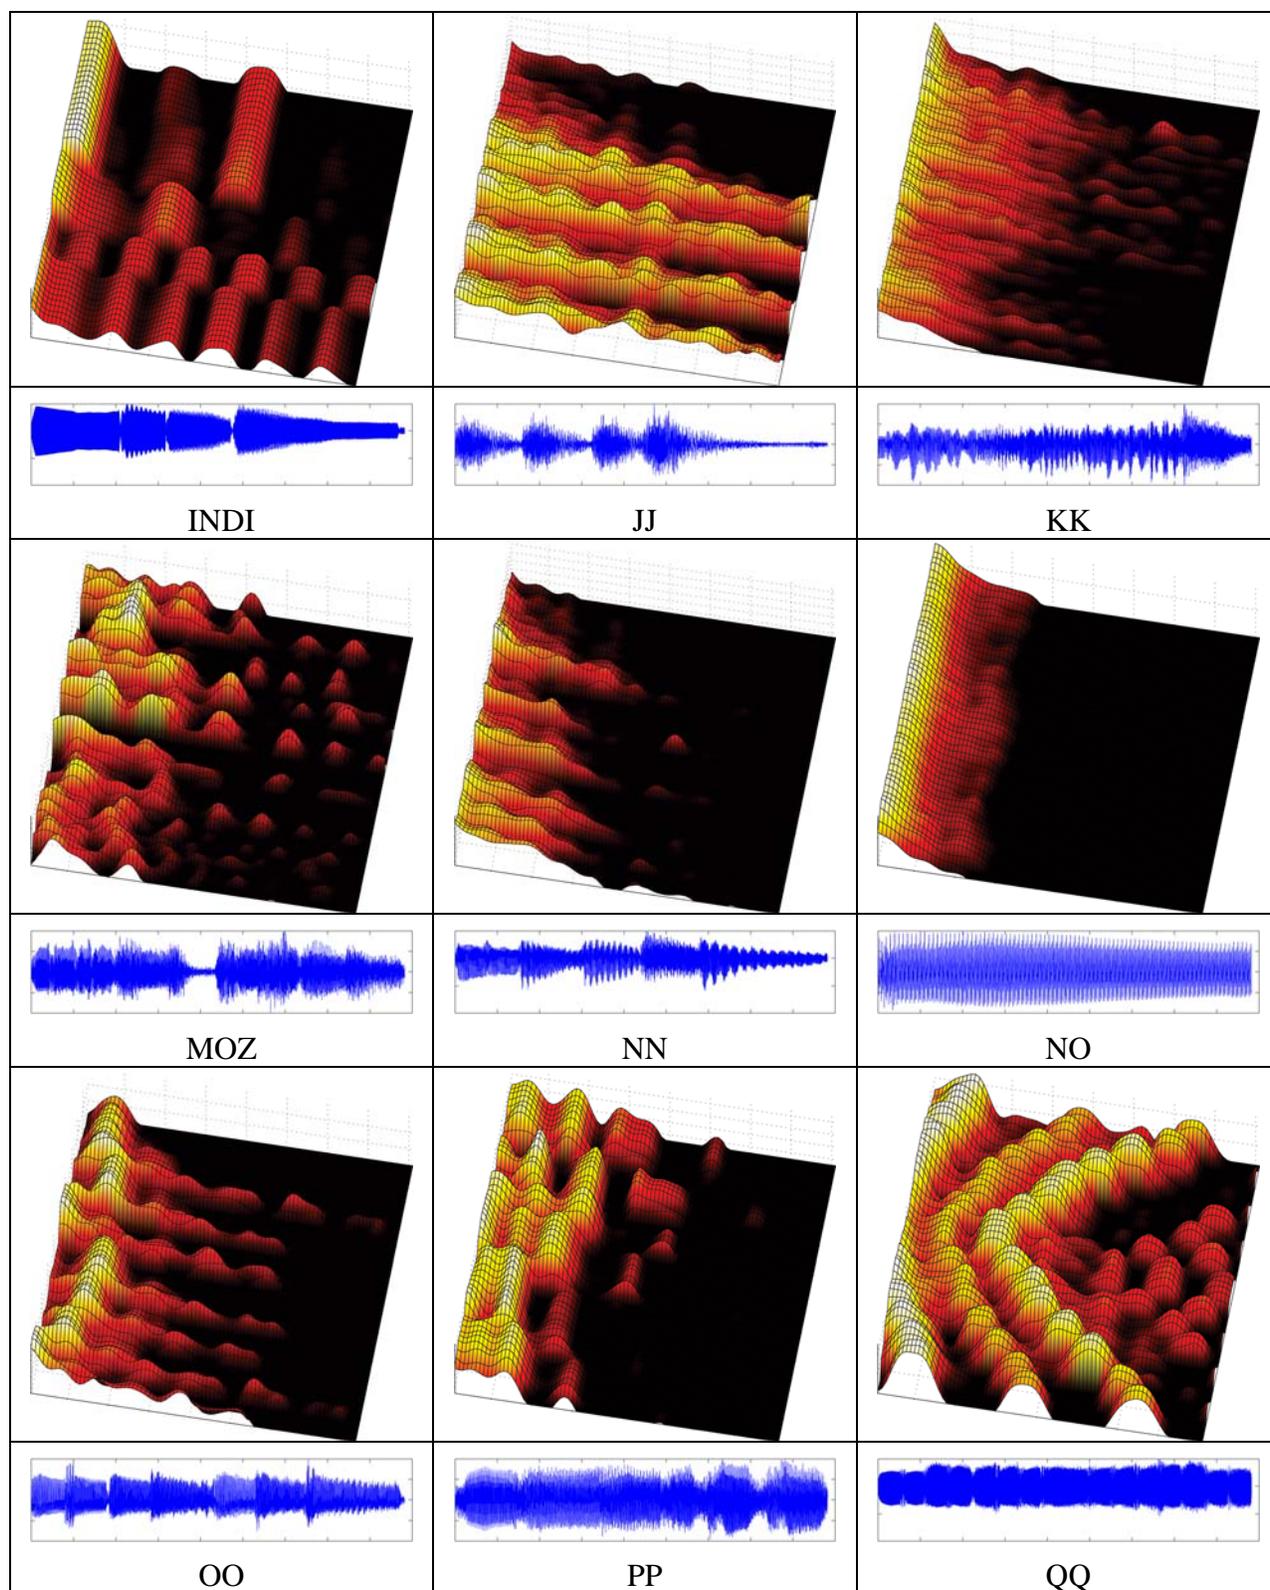

9.1. Appendix A: Graphic Representations of Auditory Stimuli

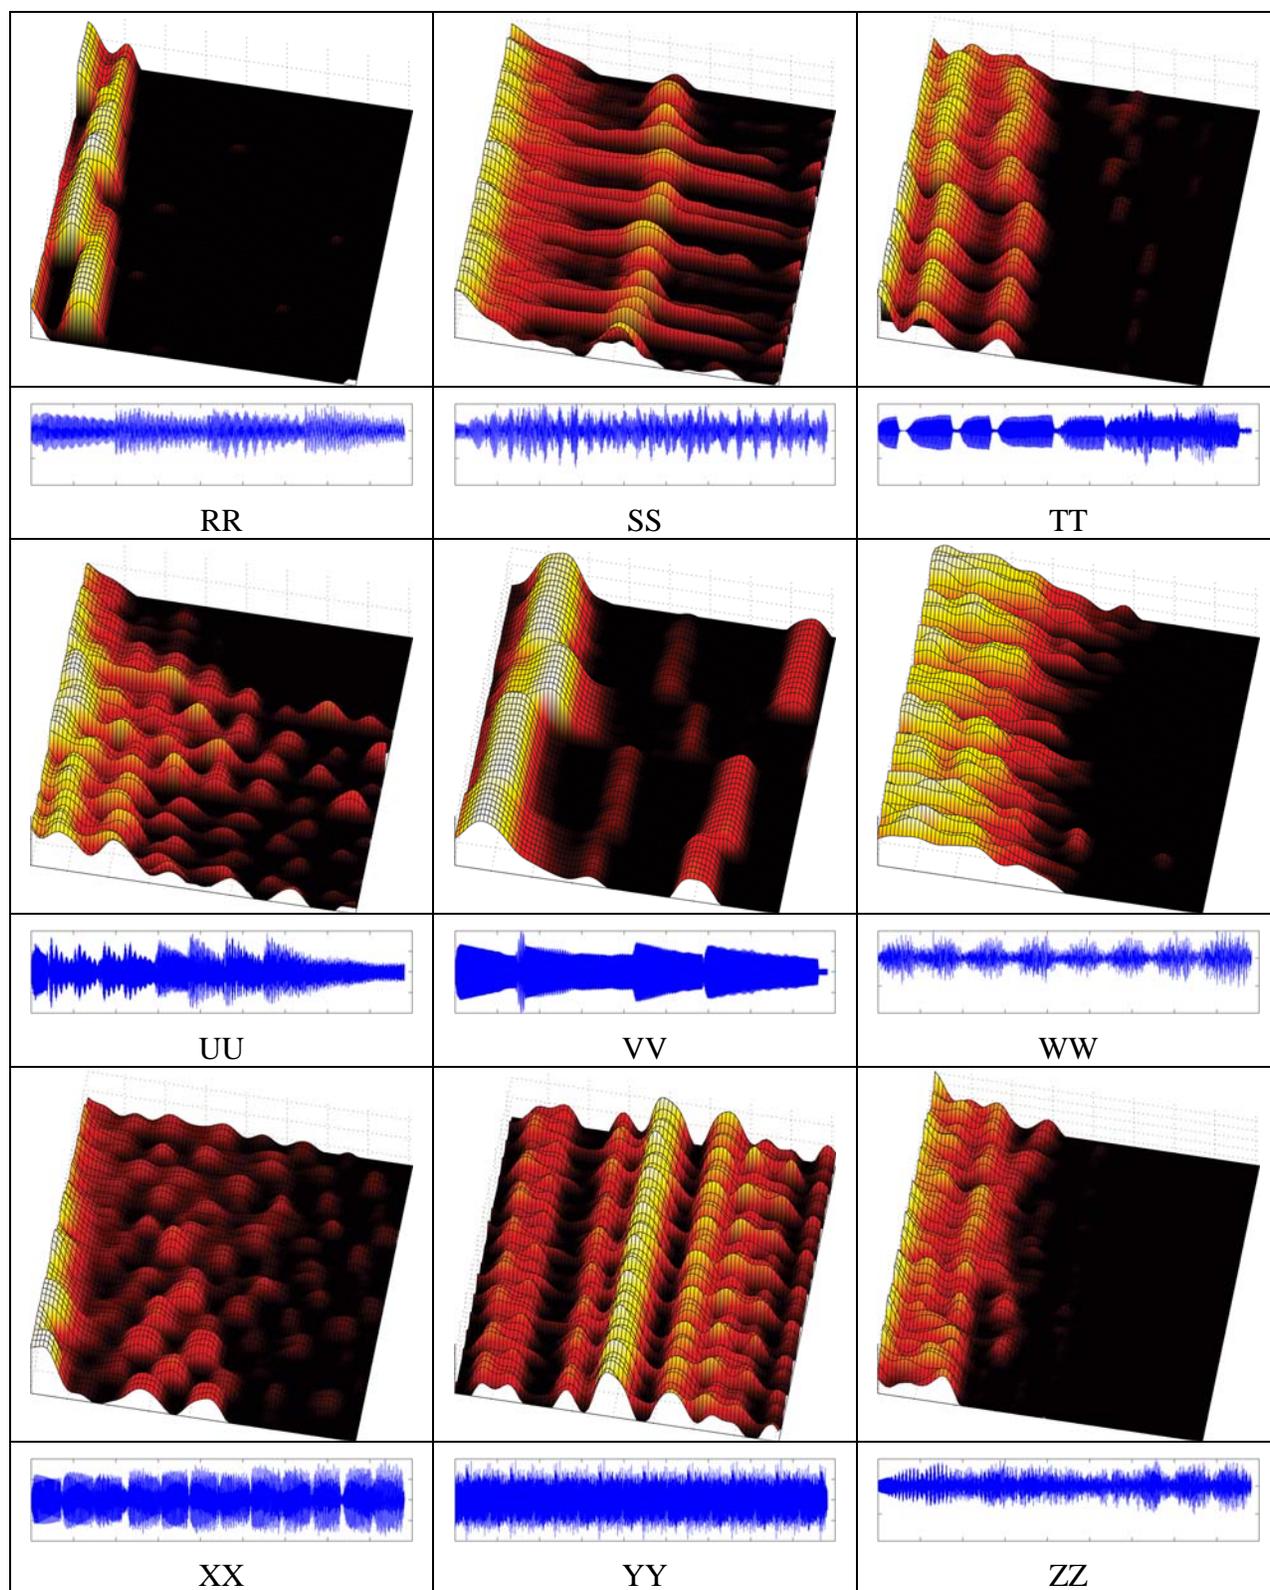

Table 10: spectrograms of all auditory stimuli used in the experiments. The top row shows a 3-dimensional spectrogram of the each stimulus. The x-axes represents the frequency (100Hz to 10Khz), the y-axes the time (all stimuli were 1 second long) and the z-axes the amplitude. Higher amplitude is also color-coded: darker areas have low relative amplitude and lighter areas have higher amplitudes.

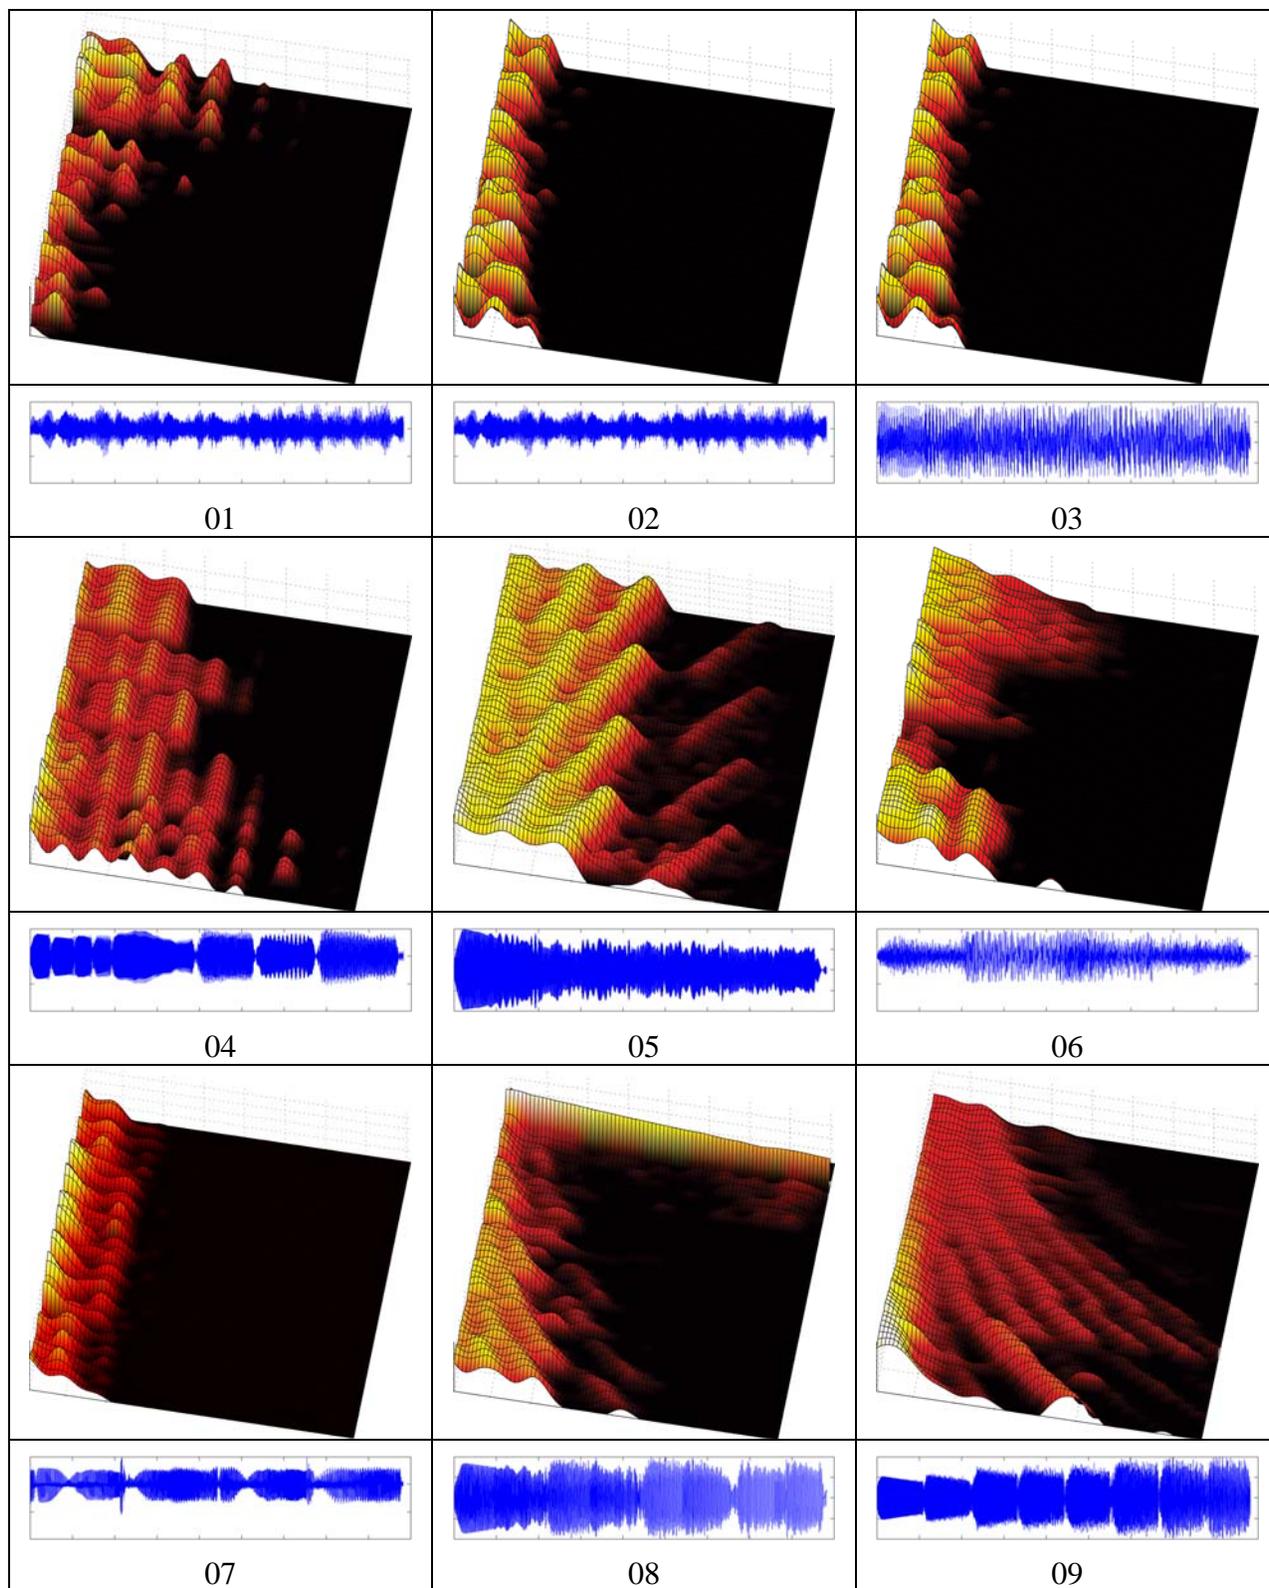

The second row shows a time vs. phase display.

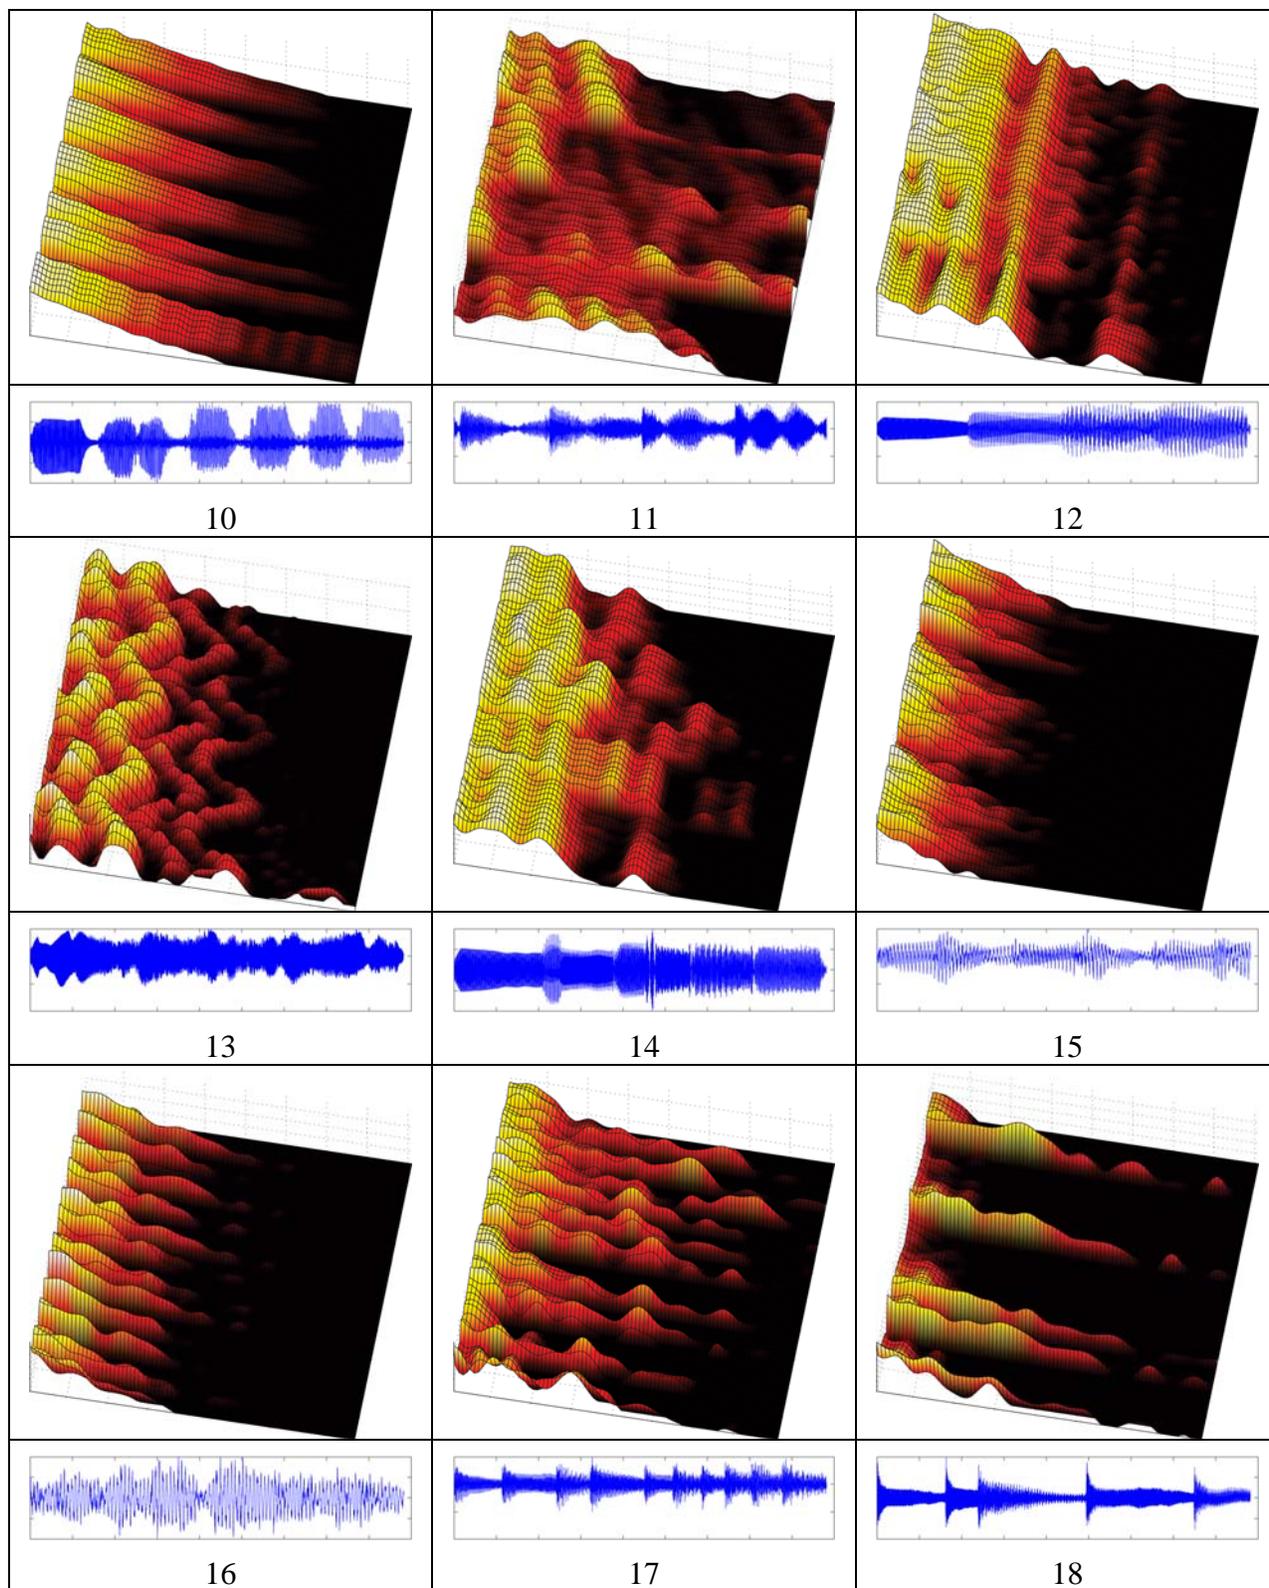

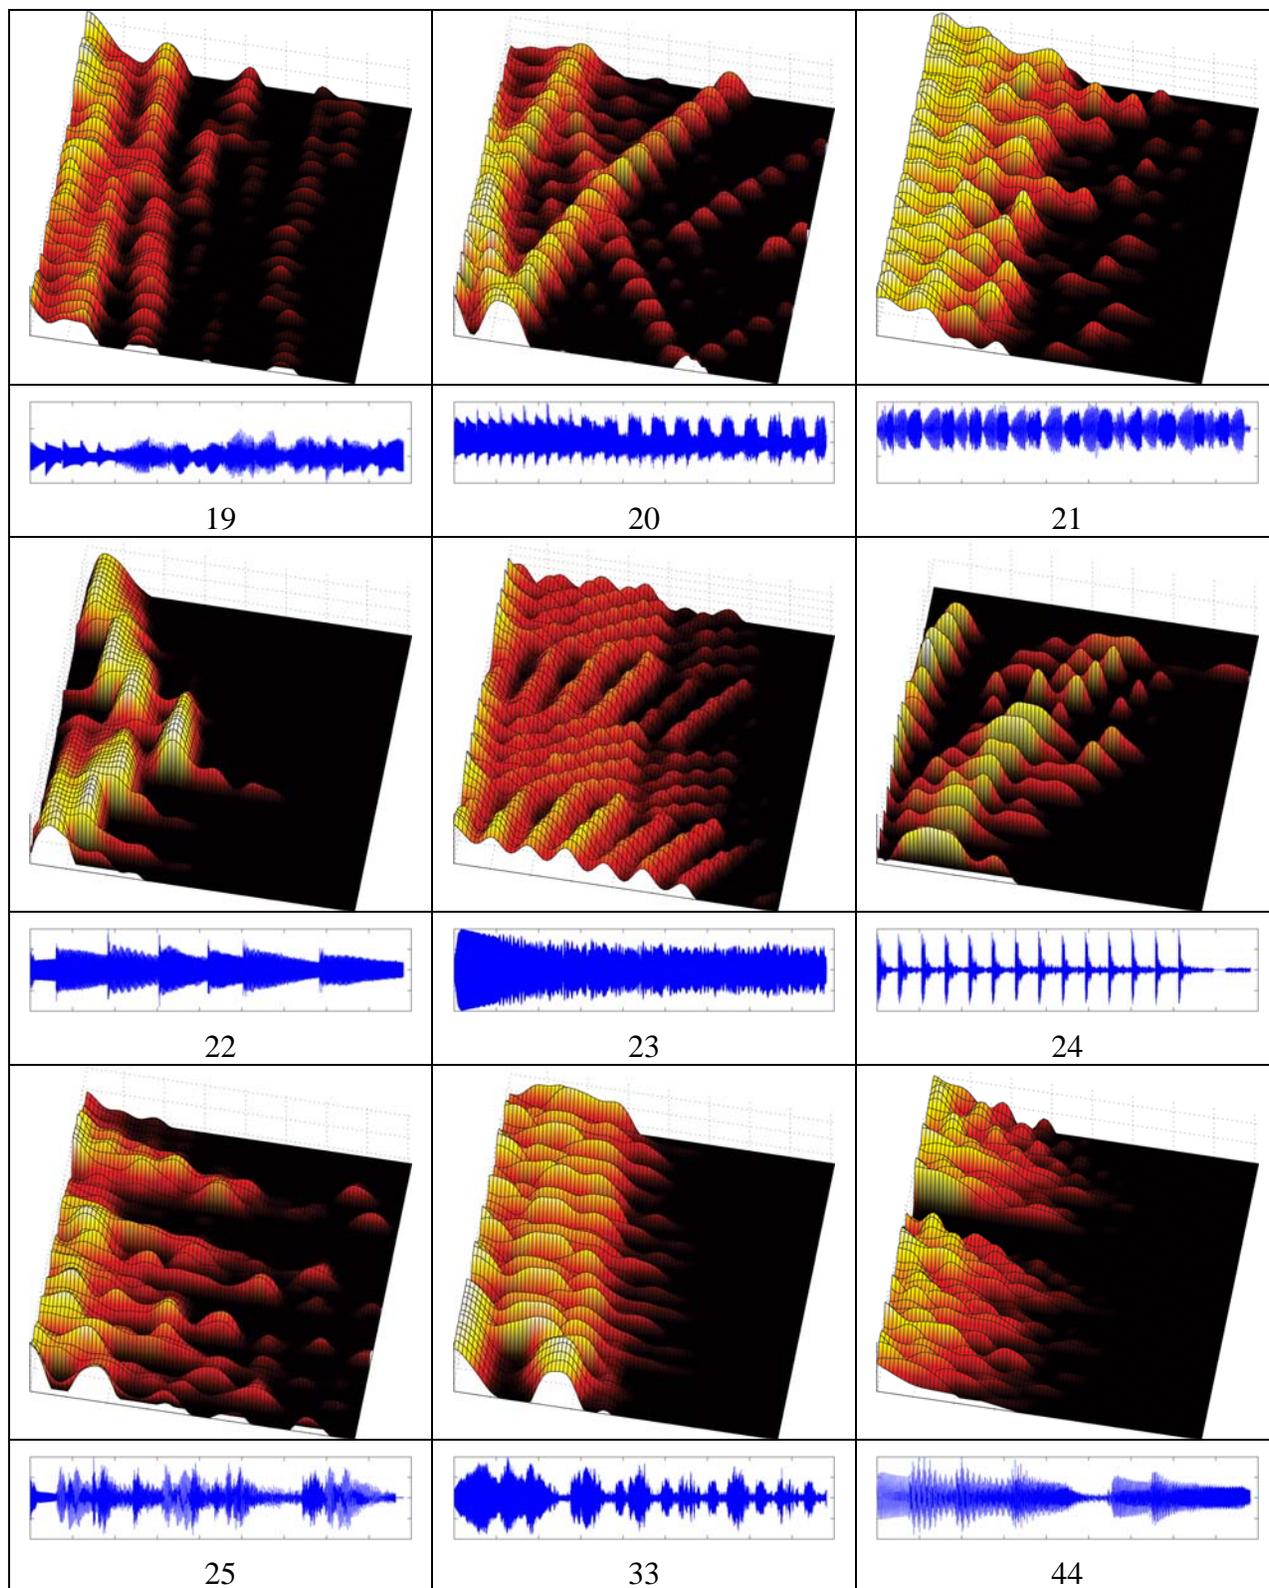

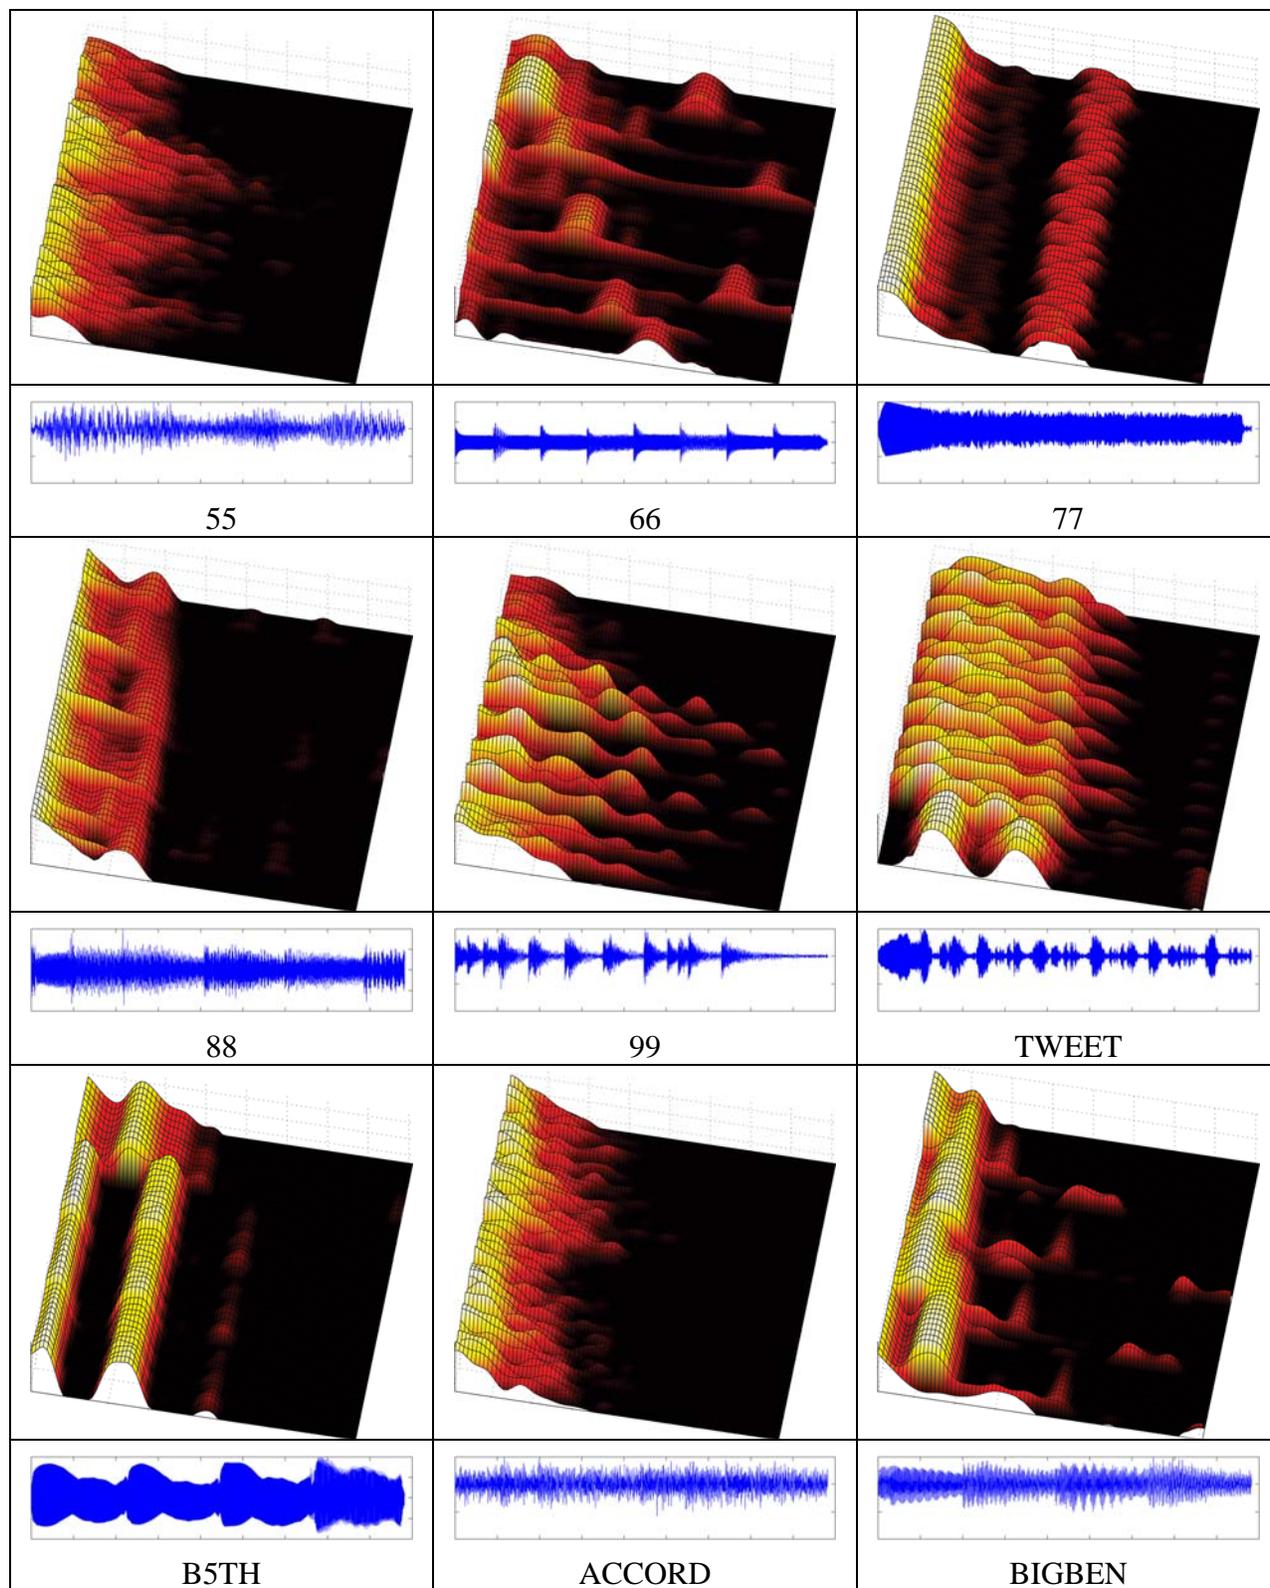

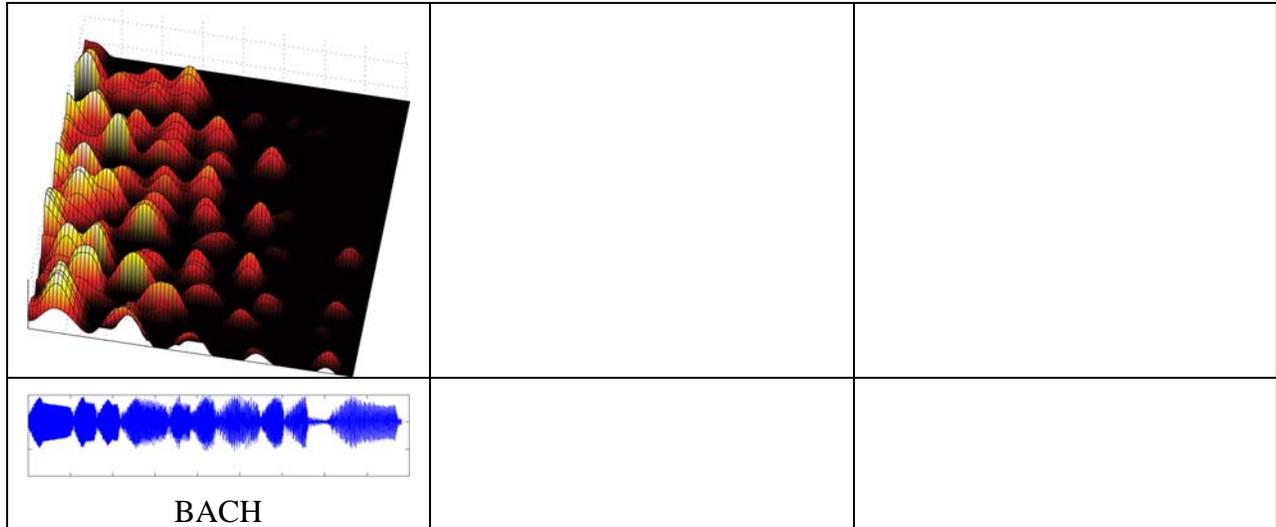

9.2. Appendix B: Software code

All applications for the creation of test trials and the display of stimuli was written in the multimedia graphic programming environment MAX® by Opcode.

9.2.1. Visual Random Generator
