PREDICTING DIFFERENT HEALTH BEHAVIORS OF YOUNGER AND OLDER ADULTS IN SOUTH KOREA

Dissertation zur Erlangung des akademischen Grades

Doktorin der Philosophie

(Dr. phil.)

Vorgelegt von

Dipl. Psych.

Youlia Spivak

Erstgutachter: Prof. Dr. Ralf Schwarzer
Freie Universität Berlin

Zweitgutachterin : Prof. Dr. Britta Renner
Jacobs University Bremen

Datum der Disputation: 05.11.07

TABLE OF CONTENTS

Acknowledgments ..... **ix**
Abstract ..... **x**
Zusammenfassung ..... **xiii**

1. Introduction **1**
1.1 DISEASES AND HEALTH BEHAVIORS IN SOUTH KOREA 1
1.1.1 Pattern of Diseases in South Korea 1
1.1.2 Behavioral Risk Factors for CVD 2
1.1.2.1 Nutrition *3*
1.1.2.2 Physical Activity *4*
1.1.2.3 Alcohol Consumption *5*
1.1.2.4 Smoking *6*

2. Theory **8**
2.1. THE HAPA-MODEL - A HEALTH BEHAVIOR CHANGE MODEL 8
2.1.1 Phase-Specific Self-Efficacy Beliefs 10
2.1.2 Planning 11
2.1.3 HAPA - a Dynamic Stage Model 11
2.1.4 Empirical Evidence for HAPA 14
2.1.5 Behavior Type: Health Promoting vs. Addictive Behaviors 15
2.1.6 The Role of Past Behavior 20

2.2 UNIVERSALITY OF HEALTH BEHAVIOR MODELS 21
2.2.1 Behavior Change Theories and Social-Cultural Context 22

2.3 HEALTH AND LIFESPAN PSYCHOLOGY 24
2.3.1 A Lifespan Perspective on Health 24
2.3.1.1. Development as a Life Long Process *25*
2.3.1.2 Development as Joint Occurrence of Gains and Losses *26*
2.3.1.3 Shift in Allocation of Resources from Growth Towards Maintenance and Regulation of Loss *26*
2.3.2 The Theory of Selection, Optimization and Compensation 27
2.3.3 Age-Related Changes in the Importance of Health Goals 28
2.3.4 Age-Related Changes in Goal Pursuit 31
2.3.5 Age-Differences in Health Behaviors and Behavior Patterns 34
2.3.6 Age-Related Differences in Socio-Cognitive Variables 38

2.4 RATIONALE FOR THE PRESENT STUDY 40

2.5 RESEARCH QUESTIONS AND HYPOTHESES 42
2.5.1 Is HAPA Applicable to a South Korean Sample? 43
2.5.2 Does the Quality of the Prediction of Health Behaviors Vary as a Function of Behavior Type: Health Promoting vs. Addictive Behaviors? 43
2.5.3 The Role of Past Behavior 43

2.5.4 Are there Age-Differences in the Structure of Social-Cognitive Variables in Predicting Health Behaviors? 44
2.5.4.1 Age-Related Mean Differences in Health Behaviors 45
2.5.4.2 Can Distinct Behavior Patterns be Identified? 45
2.5.4.3 Age-Related Mean Differences in Health Cognition 45
2.5.4.4 Structural Differences 46

3. Method 48
3.1 SAMPLE 48
3.1.1 Recruitment and Procedure 48
3.1.2 Participants 48

3.2 MEASURES 51
3.2.1 Health Behaviors 51
3.2.1.1 Nutrition 51
3.2.1.2 Physical Activity 51
3.2.1.3 Alcohol Consumption 53
3.2.1.4 Smoking 54
3.2.2 Health Cognitions 54
3.2.2.1 Risk Perception 54
3.2.2.2 Outcome Expectancies 54
3.2.2.3 Behavioral Intentions 55
3.2.2.4 Perceived Self-Efficacy 55
3.2.2.5 Planning 57

3.3 DESCRIPTION OF THE LONGITUDINAL SAMPLE AND DROP-OUT 58
3.3.1 Drop-out Analysis of Health Behaviors 58
3.3.2 Drop-out Analysis for Health Cognitions 59

3.4 ANALYSES 61
3.4.1 Treatment of Missing Values and Outliers 62
3.4.2 General Analytic Procedures 63
3.4.2.1 Analyses of Variance (ANOVA) 63
3.4.2.2 Structural Equation Modeling (SEM) 63
3.4.2.3 Latent Cluster Analysis (LCA) 64

4. Results 66
4.1 APPLICABILITY OF THE HAPA-MODEL TO DIFFERENT HEALTH BEHAVIORS IN A NON-WESTERN CULTURE 66
4.1.1 Applicabilty of the HAPA to Health Promoting Behavior: Nutrition . 66
4.1.1.1 Correlational relationships 67
4.1.1.2 Structural Relationships 68
4.1.1.3 The Role of Past Behavior in Predicting Nutrition Behavior 69
4.1.2 Applicability of the HAPA to Health Promoting Behavior: Physical Activity 70
4.1.2.1 Correlational Relationships 70
4.1.2.2 Structural Relationships 71
4.1.2.3 The Role of Past Behavior in Predicting Physical Activity 72

4.1.3 Applicability of the HAPA to Addictive Behavior: Alcohol Consumption 73
4.1.3.1 Correlational Analysis 73
4.1.3.2 Structural Relationships 74
4.1.3.3 The Role of Past Behavior in Predicting Alcohol Consuption 75
4.1.4 Applicability of the HAPA to Addictive Behavior: Cigarette Consumption 76
4.1.4.1 Correlational Relationship 76
4.1.4.2 Structural Relationships 77
4.1.4.3 The Role of Past Behavior in Predicting Cigarette Consumption 78

4.2 APPLICABILITY OF THE HAPA-MODELL TO DIFFERENT AGE GROUPS: MEAN DIFFERENCES 79
4.2.1 Age-Related Differences in Health Behaviors 79
4.2.2 Bivariate Relationships among Different Health Behaviors 82
4.2.3 Identification and Description of Different Health Behaviors Patterns 83
4.2.3.1 Description of the Three Cluster Solution 85
4.2.3.2 Age-group Differences in the Likelihood of Cluster Membership. 87
4.2.4 Age Difference in Health Cognitions 89
4.2.4.1 Nutrition-Related Health Cognitions 89
4.2.4.2 Physical Activity-Related Health Cognitions 92
4.2.4.3 Alcohol-Related Health Cognition 94
4.2.4.4 Smoking-Related Health Cognitions 96

4.3 APPLICABILITY OF THE HAPA-MODEL TO DIFFERENT AGE-GROUPS: STRUCTURAL DIFFERENCES 98
4.3.1 Age-Related Structural Difference by Predicting Nutrition Behavior 98
4.3.1.1 Testing for Multiple Group Invariant Factorial Structure of Measurement Instruments 99
4.3.1.2 Testing Mediation 101
4.3.1.3 Alternative Explanation: Intenders vs. Nonintenders. 103
4.3.2 Age-Related Structural Difference by Predicting Physical Activity 104
4.3.2.1 Testing for Multiple Group Invariant Factorial Structure of Measurement Instruments 105
4.3.2.2 Testing Mediation 107
4.3.2.3 Alternative Explanation: Intenders vs. Nonintenders 108
4.3.3 Age-Related Structural Difference by Predicting Alcohol Consumption 108
4.3.3.1 Testing for Multiple Group Invariant Factorial Structure of Measurement Instruments 109
4.3.3.2 Testing Mediation 111
4.3.3.3 Alternative Explanation: Intenders vs. Nonintenders 111

5. Discussion 114
5.1 SUMMARY OF MAIN FINDINGS AND THEIR RELATIONSHIP TO PREVIOUS RESEARCH 115
5.1.1 Applicability of the HAPA-Model to Different Types of Health Behaviors 117
5.1.2 Applicability of the HAPA-Model to a Non-Western Country 120

5.1.3 Applicability of the HAPA-Model to Different Age Groups 122
5.1.3.1 Age-Related Mean Differences in Health Behaviors 123
5.1.3.2 Age-Related Differences in Behavior Patterns 123
5.1.3.3 Age-Related Differences in Health Cognitions 125
5.1.3.4 Structural Differences 128

5.2 CONCLUSIONS AND LIMITATIONS OF THE PRESENT RESEARCH 131
5.2.1 Limitations to the Conclusions about Quality of Prediction across Different Health Behaviors 132
5.2.2 Limitation to the Conclusions about Applicability to a Non-Western Culture 133
5.2.3 Limitations to the Conclusions about Age-Differential Effects 135
5.2.4 Methodological Limitations Imposed by Sample Characteristics and Employed Measures 136

5.3 OUTLOOK 138

6. References 140

7. Appendices 158
7.1 APPENDIX A: DESCRIPTIVES OF CENTRAL CONSTRUCTS 158

7.2 APPENDIX B: ADDITIONAL INFORMATION FOR THE MAIN ANALYSES OF THE STUDY 164
7.2.1 Means, Standard Deviations and Factors Loading for Items/Parcels Constituting HAPA-Model 164
7.2.2 Exact Probabilities for the LCA Solution 168
7.2.3 Goodness of Fit Statistics for the Nested Models with and without the Inclusion of Baseline Behavior 169

7.3 APPENDIX C: ADDITIONAL CONTROL ANALYSES 170
7.3.1 Multi-Group Comparison: Nonintenders Versus Intenders in the Domain of Nutrition. 170
7.3.2 Multi-Group Comparison: Nonintenders Versus Intenders in the Domain of Physical Activity. 172
7.3.3 Multi-Group Comparison: Nonintenders Versus Intenders in the Domain of Alcohol Consumption 174

7.4 APPENDIX D: SCALES AND INSTRUMENTS EMPLOYED IN THE PRESENT STUDY . 177
7.4.1 General Description of the Participants 177
7.4.1.1 Age and Sex 177
7.4.1.2 Socioeconomic Status 177
7.4.1.3 Marital Status 178
7.4.1.4 Social Standing 178
7.4.1.5 Financial Scope 178
7.4.1.6 Household Income 178
7.4.2 Health Behaviors 179
7.4.2.1 Nutrition Style 179
7.4.2.2 Exercise 180

7.4.2.3 Tobacco Consumption *181*
7.4.2.4 Alcohol Consumption *181*
7.4.3 Health-Related Cognitions 182
7.4.3.1 Risk Perception *182*
7.4.3.2 Intentions *182*
7.4.3.3 Planning Behavior Changes *183*
7.4.3.4 Outcome Expectancies of Behavior Change *185*
7.4.3.5 Behavior Change Self-Efficacy *187*
Lebenslauf **190**
Erklärung **191**

LIST OF TABLES

Table 1: Examples of research applying health behavior change theories to addictive behaviors 18
Table 2: Overview of central research questions of the present study 47
Table 3: Socio-demographic characteristics of participants 50
Table 4: Description of health behaviors of dropped-out participants ..... and continuers 59
Table 5: Description of domain-specific outcome expectancies of dropped-out participants and continuers 59
Table 6: Description of domain-specific self-efficacy of dropped-out participants and continuers 60
Table 7: Description of intentions of dropped-out participants and continuers 60
Table 8: Description of domain-specific planning of dropped-out participants and continuers 61
Table 9: Nutrition behavior of younger and older adults: means, standard deviations and sex differences 80
Table 10: Physical activity (per week) of younger and older adults: means, standard deviations, and sex differences 80
Table 11: Alcohol consumption of younger and older adults: means, standard deviations, and sex differences 81
Table 12: Daily cigarette consumption among younger and older smokers 81
Table 13: Behaviors intercorrelations 82
Table 14: Goodness of fit indices to determine the optimum number of clusters 85
Table 15: Clustering variable profiles: cluster size, means or percentage of participants with favorable characteristic on respective behavior, t-test and χ^2 tests of differences between cluster means and percentages, respectively 87
Table 16: Age-group differences in the frequency of cluster membership 87
Table 17: Risk perception of younger and older adults: means, standard deviations, and sex differences 90
Table 18: Nutrition-related outcome expectancies of younger and older adults: means, standard deviations, and sex differences 90
Table 19: Nutrition-related self-efficacy of younger and older adults: means, standard deviations, and sex differences 91
Table 20: Intention to adopt a healthier diet: means, standard deviations, age and sex differences 91

Table 21: Nutrition-related action and coping planning of younger and older adults: means, standard deviations, and sex differences 92
Table 22: Physical activity-related outcome expectancies of younger and older adults: means, standard deviations, and sex differences.....92
Table 23: Physical activity-related self-efficacy of younger and older adults: means, standard deviations, and sex differences.....93
Table 24: Intention to be physically active: means, standard deviations, age and sex differences.....93
Table 25: Physical activity-related planning of younger and older adults: means, standard deviations, and sex differences.....94
Table 26: Alcohol-related outcome expectancies of younger and older adults: means, standard deviations, and sex differences.....95
Table 27: Alcohol-related self-efficacy of younger and older adults: means, standard deviations and sex differences 95
Table 28: Intention to reduce alcohol consumption: means, standard deviations, age and sex differences.....95
Table 29: Alcohol-related planning of younger and older adults: means, standard deviations, and sex differences 96
Table 30: Smoking-related outcome expectancies of younger and older adults: means and standard deviations.....96
Table 31: Smoking-related self-efficacy of younger and older adults: means and standard deviations.....97
Table 32: Intention to quit smoking: means, standard deviations and age differences 97
Table 33: Smoking-related planning of younger and older adults: means, standard deviations 97
Table 34: Correlations between nutrition and nutrition-related health cognitions 67
Table 35: Goodness of Fit statistics for the groups of young and older adults.....98
Table 36: Goodness of Fit Indices for Nested Models.....100
Table 37: Correlations between physical activity-related health cognitions and physical activity 70
Table 38: Goodness of Fit Indices for Nested Models.....106
Table 39: Correlations between alcohol consumption and alcohol-related health cognitions.....73
Table 40: Goodness of Fit Indices for Nested Models.....110
Table 41: Correlations between cigarette consumption and smoking-related health cognitions.....76
Table 42: Overview of Central Research Questions of the Present Study.....116

LIST OF FIGURES

Figure 1: Health Action Process Approach (HAPA) Model 10
Figure 2: Descriptive statistics for physical activities of younger and middle aged/older adults 52
Figure 3: HAPA-model for nutrition for the total sample (n = 684). 69
Figure 4: HAPA-Model for physical activity for total sample (n = 689). 72
Figure 5: HAPA-Model for alcohol consumption for the total sample (n = 412). 75
Figure 6: HAPA-Model for cigarette consumption for the total sample of smokers (n = 159) 78
Figure 7: Conditional probabilities of having favorable characteristics on different health behaviors given a certain cluster membership. 86
Figure 8: Percentage of younger and older participants in the three clusters 88
Figure 9: HAPA-Model for nutrition in different age groups: In italics are coefficients for the older group. 101
Figure 10: Relationship among intention to adopt healthier nutrition, planning and nutrition style for younger adults. The coefficient for direct effect after controlling for indirect effect is in bold, (n = 394). 103
Figure 11: Relationship among intention to adopt healthier nutrition, planning and nutrition style for older adults. The coefficient for direct effect after controlling for indirect effect is in bold, (n = 131). 103
Figure 12: HAPA-Model for physical activity in different age groups: In italics are coefficients for the older group. 106
Figure 13: Relationship among intention to be physically active, planning and nutrition style: Standardized regression coefficients (n = 135). The coefficient for direct effect controlled for the indirect effect is in bold 107
Figure 14: HAPA-Model for alcohol consumption in different age groups: In italics are coefficients for the older group. 111

LIST OF TABLES AND FIGURES IN APPENDICES

Appendix A: Descriptives of Central Constructs

Table A 1: Basic distributions of health behaviors in young (16-35) and middle aged/older (36-90) participants 158
Table A 2: Basic distributions of health cognitions in young (16-35) and middle aged/older (36-90) participants 159

Appendix B: Additional Information to the Main Analyses of the Study

Table B 1: Means, standard deviations and factors loadings for items/parcels constituting HAPA-Model in the domain of nutrition behavior 164
Table B 2: Means, standard deviations and factors loadings for items/parcels constituting HAPA-Model in the domain of physical activity 165
Table B 3: Means, standard deviations and factors loadings for items/parcels constituting HAPA-Model in the domain of alcohol consumption 166
Table B 4: Means, standard deviations and factors loadings for items/parcels constituting HAPA-Model in the domain of cigarette consumption 167

Table B 5: Exact probabilities to be in a certain cluster given certain behavioural characteristics....168
Table B 6: Goodness of Fit statistics for the nested models with and without the inclusion of baseline nutrition behavior....169
Table B 7: Goodness of Fit statistics for the nested models with and without the inclusion of baseline physical activity....169
Table B 8: Goodness of Fit statistics for the nested models with and without the inclusion of baseline alcohol consumption....169
Table B 9: Goodness of Fit statistics for the nested models with and without the inclusion of baseline cigarette consumption....169

Appendix C: Control Analysis

Table C 2: Goodness of Fit Indices for nested models....171
Table C 3: Goodness of Fit indices for nested models....174
Table C 4: Goodness of Fit indices for nested models....176
