

ACKNOWLEDGMENTS

This dissertation was a part of the project “Risk Appraisal and Consequences in Korea” (principal investigators: Prof. Britta Renner and Prof. Ralf Schwarzer) at the Free University, Berlin and the Center of Life Long Learning and Institutional Development at Jacobs University. Both institutions provided excellent and stimulating research environments. The present dissertation was embedded in the Graduate Program “Neuropsychiatry and Psychology of Aging” funded by the Deutsche Forschungsgemeinschaft, which also financed me through a pre-doctoral stipend.

I would like to express special gratitude to both of my supervisors Prof. Ralf Schwarzer and Prof. Britta Renner for their continuous engagement and highly professional advice. Ralf Schwarzer was the one who introduced me to the exciting field of health psychology during my undergraduate studies and continued to share his abundant scientific knowledge with me by supervising this dissertation. Britta Renner provided skillful advice and support in every phase of this dissertation. She was always generous with her time to discuss ideas and results of the study. Her advice was always challenging and greatly improved this dissertation. I am also grateful to Prof. Dieter Kleiber, Prof. Detlev Liepmann, and Dr. Jochen Ziegelman for their willingness to participate in the dissertation committee.

I would like to thank Sonkyo Kwon for coordinating this large project and collecting in South Korea the unique data that was used for this dissertation.

My special gratitude goes to my terrific colleges Martina Panzer and Andries Oeberst who were always encouraging, supporting and never got annoyed to discuss or to read the numerous version of this dissertation. Invaluable support also came from my fellow graduate students, particularly Dr. Jessica Dörner, Dr. Eva-Marie Kessler, Dr. Denis Gerstof, Dr. Sonja Böhmer, Dr. Jochen Ziegelman, and Dr. Daniel Grünh. We shared the “ups” and “downs” of the long dissertational process and many of them have become friends.

This dissertation would not be possible without the emotional and social support from my friends and family. Many thanks go to Eva Lulle, Anja Wiebeck, Daniel Geiger and Jana Bombowski who always reminded me that there are other great things in life but work. And to Michael for his support, continued faith, humor and love.
