

Striving for Gains and Preventing Losses:
Multi-Method Evidence on the Differences in Personal Goal Orientation
in Early and Late Adulthood

Natalie C. Ebner

Dissertationsschrift zur Erlangung des Doktorgrades der Philosophie am
Fachbereich Erziehungswissenschaft und Psychologie der Freien Universität
Berlin

Berlin, 11. April 2005

Gutachter:

Prof. Dr. Paul B. Baltes & Prof. Dr. Alexandra M. Freund

Prof. Dr. Ralf Schwarzer

Betreuer:

Prof. Dr. Paul B. Baltes

TABLE OF CONTENTS

ABSTRACT	xii
INTRODUCTION.....	1
THEORETICAL BACKGROUND.....	4
Lifespan Development Is Characterized by Gains and Losses	5
<i>The Ratio of Gains to Losses Changes Across the Lifespan: Subjective Beliefs About Developmental Change and Objective Developmental Change</i>	6
Lifespan Trajectories of Cognitive and Physical Functioning.....	8
Integrating Lifespan Development and Action Perspectives: Development as Flexible and Adaptational Person–Environment Interaction	11
<i>Normative Age-Graded, Normative History-Graded, and Non-Normative Interacting Developmental Forces and the Concept of Developmental Tasks</i>	12
<i>Active Life-Management—Resources, Goals, Actions, and Development</i>	16
The Concept of Resources	16
The Concept of Personal Goals	18
The Interplay of Goal-Related Resources, Goals, Goal-Directed Actions, and Development	22
<i>Excursus: Life-Management Encompasses Automatic, Unintentional, and Unconscious Processes</i>	24
Balancing Gains and Losses: Adaptive Development Over the Lifespan.....	27
<i>What is Adaptive Development and What Are Processes That Favor it?</i>	27
Subjective Well-Being as One Possible Criterion of Adaptive Development	29
How Goals and Goal-Related Processes Impact on Adaptive Development	30
<i>The Model of Selection, Optimization, and Compensation—A General, Meta-Theoretical Framework for Understanding Adaptive Development</i>	31
Adaptive Development as Endorsement of Selection, Optimization, and Compensation Throughout Life.....	34
<i>Two Additional Models of Successful Development</i>	38
The Dual-Process Model of Assimilative and Accommodative Mode of Coping.....	38
<i>Adaptive Development as Shifting From Assimilative to Accommodative Mode of Coping Throughout Life</i>	40
The Model of Optimization in Primary and Secondary Control	41
<i>Adaptive Development as Shifting From Primary to Secondary Control Strategies Throughout Life</i>	42
Lifespan Developmental Psychology as Integrative Framework: Personal Goal Orientation From a Lifespan Perspective.....	44
<i>Personal Goal Orientation as One Personal Goal Characteristic: Approach–Avoidance Motivation</i>	45

Historical Genesis of the Concept of Approach–Avoidance Motivation	46
Current Concepts of Approach–Avoidance Motivation: Theories, Individual Differences, Functional Impact, and Representation Levels.....	48
<i>Achievement Motivation: Mastery, Performance–Approach, and Performance–Avoidance Goals</i>	49
<i>Self-Regulatory Focus: Promotion and Prevention Focus</i>	53
<i>Possible Selves: Hoped-For and Feared Selves</i>	59
<i>Approach–Avoidance Motivation Is Represented on Different Levels</i>	62
<i>Growth, Maintenance, Prevention of Loss: The Present Studies’ Lifespan Developmental Conceptualization of Personal Goal Orientation</i>	64
Does Personal Goal Orientation Shift Across the Lifespan and Why?	67
<i>Mechanisms Underlying a Shift in Personal Goal Orientation and Its Age-Differential Functional Impact</i>	68
Age-Graded Changes in Goal-Related Resources and Expected Resource Demands.....	68
Age-Graded Social Expectations and Subjective Theories About Developmental Change.....	74
The Role of Specific Goal Domains.....	76
<i>Age-Related Differences in Personal Goal Orientation and Age-Differential Functional Impact</i>	77
Summary of the Theoretical Background and Central Research Questions.....	81
EMPIRICAL FINDINGS.....	87
General Statistical Procedures	87
<i>Statistical Software Package and General Data Handling</i>	87
Missing Values, Outliers, Normality, Internal Consistency, and Temporal Stability	87
Additional Assumptions of ANOVA.....	89
Additional Assumptions of Multiple Regression Analysis	89
Significance Level and Alpha-Level Adjustment in Multiple Testing	89

ACKNOWLEDGMENTS

I conducted my dissertation studies within the project “Selection, Optimization, and Compensation: Goals and Preferences in Lifespan Development” (principal investigators: Prof. Alexandra M. Freund (until December 2002), Dr. Michaela Riediger (since January 2003), Prof. Paul B. Baltes, and Prof. U. Lindenberger) at the Center for Lifespan Psychology of the Max Planck Institute for Human Development in Berlin (MPIB). I was financially supported by a predoctoral position at the MPIB. While working on my dissertation, I participated in two doctoral training programs: The Graduate Program “*Neuropsychiatry and Psychology of Aging*”, a joint initiative of the Free University of Berlin and the MPIB, and the International Max Planck Research School “*The Life Course: Evolutionary and Ontogenetic Dynamics (LIFE)*”, a joint initiative of the Free University of Berlin, the Humboldt University Berlin, the University of Michigan Ann Arbor, and the MPIB.

First of all, I want to thank Prof. Paul B. Baltes for the great opportunity I had to work in the excellent academic environment of his Center for Lifespan Psychology. He constantly showed interest and generously shared his scientific expertise with me in supervising my studies. My deepest gratitude goes to my advisor Prof. Alexandra M. Freund. She devoted enormous amounts of time, thoughts, and motivation into my work. She read several versions of my proposal and this dissertation, supported me when I presented my studies, and provided me with invaluable information on people, conferences, meetings, and workshops. Discussing various issues of my dissertation with her was always challenging, at the same time highly enjoyable, and I learned a lot from her. During the last three years, she was not only a great mentor but my friend.

I thank all former and current members of the Center for Lifespan Psychology for fruitful debates on my studies. I appreciate having had the opportunity to participate in the two graduate programs and thank the Steering Committees and my fellows for their feedback and support. I am very grateful to the people who helped me in the long and manifold process of conducting my dissertation project: Many thanks go to Dulce Erdt, our technical research assistant, to our student research assistants Dipl.- Psych. Poldi Kuhl, Ulrike Altmann, Antje Rauers, and to our interns Karl Kapitza, Tobias Raabe, Sanja Hodjic, and Marie Hennecke for their assistance during all phases of my work. Working with all these people was a great pleasure to me. For their very helpful advice on theoretical, statistical, and practical matters, I feel enormously thankful to Dr. Albina Bondar, Dipl.- Psych. Susanne Scheibe, and Dr. Michaela Riediger, who also commented on an almost final version of my dissertation. Very special thanks also go to Dr. Julia Delius who proofread this manuscript and improved its English with an incredible professionalism, thoroughness, and friendliness.

I want my parents to know that their interest in my work and their emotional support with respect to work and life outside work means very much to me. I deeply thank my friends Britta Burth, Albina Bondar, Sabine Schäfer, Susanne Scheibe, and Stefan Brauckmann for having always been there during these really good and really bad days. And Jörg, for all there was and is to come.
