EVOLVED RESPONSES TO AN UNCERTAIN WORLD

Dissertation
zur Erlangung des akademischen Grades
Doktor der Philosophie
(Dr. phil.)

Vorgelegt von
Dipl.-Psych.
Andreas Wilke

Erstgutachter: Prof. Dr. Gerd Gigerenzer
Zweitgutachter: Prof. Dr. Arthur Jacobs

Disputation: Berlin, 06.01.2006

Gandalf: „All we have to decide is what to do with the time that is given to us.“

quote taken from *Lord of the Rings: The Fellowship of the Ring* (2001). New Line Cinema.

TABLE OF CONTENTS

CHAPTER 1

Introduction:

Evolved Responses to an Uncertain World 1

CHAPTER 2

Dealing with Uncertainty in Domains of Everyday Life:

Beyond a Trait View of Risk-taking 6

Introduction 6

The German Validation of the Domain-specific Risk Scale 8

 Method 10

 Results 12

 Discussion 19

Risk-taking Behavior in Heterogeneous Populations 21

 Method 21

 Results 22

 Discussion 27

CHAPTER 3

Dealing with Uncertainty Regarding Mate Quality:

Is Risk-taking Used as a Cue in Mate Choice? 28

Introduction 28

 Domain-specific Risk-taking 30

Study 1: Female Ratings of Male Risk-taking 31

 Method 32

 Results 33

Study 2: Male Ratings of Female Risk-taking 36

 Method 37

 Results 37

Study 3: Partner's Ratings of Each Other	40
Method	41
Results	42
General Discussion	46
Towards a Risk-taking Scale with Evolutionarily Valid Domains	49
Method	51
Results	53
Discussion	55

CHAPTER 4

Dealing with Uncertainty in Resources:

Simple Rules for Human Foraging	56
---------------------------------	----

Introduction	56
Simple Rules for Animals in Discrete Foraging Environments	59
Human Foraging Behavior in Anthropology and Psychology	63
Investigating Simple Foraging Rules in Humans	65
Searching the External Environment: The Fishing Task	66
Method	66
Results	71
Discussion	83
Searching the Internal Environment: The Word Puzzle Task	83
Method	84
Results	92
Discussion	101
General Discussion	101

SUMMARY	104

REFERENCES	107
-------------------	------------

APPENDIX	117
-----------------	------------

Appendix A: List of 40 domain-specific risk items	117
Appendix B: Response scale instructions	119
Appendix C: List of 46 self-report items	120
Appendix D: List of 25 items for evolutionary risk scale	122
Appendix E: Post-experimental questionnaire for the fishing task	124
German summary (Deutsche Zusammenfassung)	125
Statement (Erklärung)	130
Curriculum Vitae	131

ACKNOWLEDGEMENTS

According to modern evolutionary theory, this dissertation has truly been made possible by the joint efforts of Klaus and Ilse Wilke. Across more than three decades they have been the most loving and thoughtful parents one could ask for. This dissertation work would not have been possible without their endless support, and I would like to thank them for that.

Every dissertation is the result of a long working process in which many people take part. This acknowledgement section is a hopeless attempt to give enough credit to all these people:

I would like to start by thanking Gerd Gigerenzer, director at the Max Planck Institute for Human Development, Center for Adaptive Behavior and Cognition (ABC) for being a wonderful advisor and a truly interdisciplinary thinker. His encouragement to try new things and his penchant to persevere until one really understands how things work taught me so much. The intellectual playground that Gerd Gigerenzer and the current and former members of the ABC Research Group fostered is the best and most stimulating research atmosphere a young researcher could ask for.

Paul Baltes and Jacquelynne Eccles, co-chairs of the International Max Research School LIFE, have earned my deepest gratitude for the additional training and research opportunities they provided. I would like to thank all the students who were part of the first LIFE cohort and I wish them all the best for their academic future.

Bobbi Low at the School for Natural Resources & Environment deserves an extra big thank you for hosting me during my time at the University of Michigan and being such a supportive advisor since then. I owe her much for teaching me the fundamentals of evolutionary biology.

My two primary advisors, John Hutchinson and Peter Todd, deserve the highest possible academic merits a Professor should get for advising students. Being advised not only by one, but by both, equally, made my time at the ABC Research Group an even more unique experience. John Hutchinson's sharp analytical intellect and his persistent way of going after questions showed me a lot. I am very grateful that I could learn from a behavioral ecologist and that I had such a statistical mastermind on my team. Peter Todd cannot be properly thanked in a few sentences. Within the last (almost) six years now, Peter Todd has been the consummate mentor: An outstanding advisor, a superb scientist, a trusted counselor and guide, and a very good friend. It was he that fully awakened my curiosity for evolutionary cognitive psychology, he that provided the many learning opportunities, and it was he that showed me how to connect to and

keep contact with researchers worldwide. I wish him and his wonderful family all the best for their new lives. Thanks very much for the long time that we shared!

I thank Anita Todd for correcting my English, as well as Clark Barrett, Peter Hammerstein, Martie Haselton, Elizabeth Hill, Tatsuya Kameda, Daniel Kruger, Rui Mata, Geoffrey Miller, Randy Nesse, Masanori Takezawa, and Elke Weber for the criticisms and suggestions they provided on parts of my dissertation work. Anna Auckenthaler, Detlev Liepmann, Wim Nettelstroth and Peter Walschburger were so kind to make their classes available for data collection at the Free University of Berlin. Florian Richter and Stefan Bordag provided generous help in compiling word lists for one of the reported experiments and Artur Jacobs made linguistic raw data available to us. I thank Vanessa Gash and Denis Gerstorff for their statistical advice on the Cox proportional hazard method and Guido Biele as well as Rui Mata for answering those billions of MatLab questions I had. None of the studies reported in this dissertation would have been conducted or finished on time without the help of our head experimenter Gregor Caregnato as well as all the student assistants that supported me during my time as a predoctoral researcher: Julia Ksenski, Julian Marewski, Merle Rietschel, and Sonja Schulze.

Additionally, I would like to thank my family and friends for their support, love and their understanding during this enterprise. In particular, I would like to thank Jessica Garrett, Alex Gross, Mara Lübbert, Sofia Morais, Karthik Panchanathan, my boxing trainer Raffi, Christina Röcke, Michalina Seekamp, Maciej Szalonek, Thomas at Videodrom, Peter Todd, and my sister Regina Wilke.

I would like to end this acknowledgement section by giving credit to two more people: Jutta and Rui Mata. Agradeço-vos aos dois por terem estado ao meu lado. Rui, o facto de te ter por perto durante o meu doutoramento fez dele um período memorável e muito especial. Sem dúvida alguma que o facto de ter tido o apoio de alguém em quem confio e com quem posso contar sempre tornou tudo muito mais fácil. Jutta, ter do nosso lado a mulher inteligente, afável e íntegra que és, fez com que o sucesso nos tivesse sido garantido desde o início—nós estamos prestes a atingi-lo e vamos ajudar-te a consegui-lo também. Vocês são o casal mais completo que eu alguma vez conheci e estou muito contente por ter tido essa oportunidade.

Berlin, October 2005

Andreas Wilke
