1	Directory	1
2	Introduction	2
3	Materials and methods	3
3.1	Determination of soil parameters	3
3.1.1	Water content	3
3.1.2	Maximum water holding capacity (MWC).....	3
3.1.3	Soil acidity	3
3.1.4	Content of organic matter and organic carbon	4
3.1.5	Grain size	4
3.2	Test organisms	4
3.3	Tests	5
3.3.1	Soil tests	5
3.3.2	Non-soil tests	8
3.3.3	Statistics	9
4	Pure substances	11
4.1	Abstract.....	11
4.2	Theoretical background	11
4.2.1	TNT	12
4.2.2	Hexyl	14
4.2.3	Hexogen (RDX)	15
4.2.4	Octogen (HMX).....	16
4.2.5	Triaminotoluene (TAT).....	17
4.3	Materials and methods	18
4.3.1	Contaminants	18
4.3.2	Tests.....	19
4.4	Results	20
4.4.1	TNT	20

4.4.2	Hexyl	27
4.4.3	Hexogen (RDX).....	36
4.4.4	Octogen (HMX)	38
4.4.5	Triaminotoluene (TAT)	39
4.4.6	Summary of Results	42
4.5	Discussion.....	43
4.5.1	TNT	43
4.5.2	Hexyl	48
4.5.3	Hexogen (RDX) and Octogen (HMX).....	50
4.5.4	TAT	51
4.5.5	Comparison of the toxicity to different organisms	52
4.5.6	Comparison of tests	55
5	Toxicity of TNT in different reference soil materials	57
5.1	Abstract	57
5.2	Theoretical background.....	57
5.2.1	Organic matter	57
5.2.2	Clay.....	58
5.2.3	Sorption to organic matter and clay	58
5.2.4	Sorption of TNT	58
5.3	Materials and methods.....	59
5.3.1	Reference soil materials	59
5.3.2	Treatment of soil materials and tests	61
5.3.3	Validity of tests and treatment of results	62
5.4	Results	62
5.4.1	Comparison of the uncontaminated reference soil materials	62
5.4.2	Lufa 2.3	63
5.4.3	Lufa 3	64
5.4.4	Lufa 4	64
5.4.5	Potting soil.....	65
5.4.6	Comparison of the toxicity of TNT in different reference soil materials.....	65

5.5	Discussion	66
5.5.1	Comparison of uncontaminated reference soil materials.....	66
5.5.2	Comparison of the toxicity of TNT in the reference soil materials.....	68
6	Ageing of TNT-contaminated soil materials	71
6.1	Abstract.....	71
6.2	Theoretical background	71
6.2.1	Sorption	72
6.2.2	Microbial degradation of TNT.....	72
6.3	Materials and methods	74
6.3.1	Ageing at different temperatures.....	74
6.4	Results	75
6.4.1	Ageing at different temperatures.....	75
6.4.2	More detailed assessment of ageing at 20°C.....	82
6.4.3	Summary of results.....	85
6.5	Discussion	86
6.5.1	Ageing at different temperatures.....	86
6.5.2	More detailed assessment of ageing at 20°C.....	90
7	Contaminated soil materials	92
7.1	Abstract.....	92
7.2	Theoretical background	92
7.2.1	“Werk Tanne” Clausthal-Zellerfeld	93
7.2.2	Elsnig near Torgau	94
7.2.3	Hambühren.....	94
7.2.4	Stadtallendorf	94
7.3	Materials and methods	95
7.3.1	Properties of the soil materials.....	95
7.3.2	Analysis of contaminated soil samples.....	95
7.3.3	Evaluation of the toxicity of heavy metals in the contaminated soil materials	96
7.4	Results	98
7.4.1	„Werk Tanne“ Clausthal-Zellerfeld	98

7.4.2	Elsnig near Torgau	100
7.4.3	Hambühren	103
7.4.4	Stadtallendorf	103
7.4.5	Toxicity of TNT-contaminated soil materials	104
7.4.6	Summary of results	104
7.5	Discussion	105
7.5.1	Toxicity of the soil materials	106
7.5.2	Comparison of the toxicity of contaminated soil materials.....	107
7.5.3	Comparison with literature.....	108
8	Remediation.....	113
8.1	Abstract	113
8.2	Theoretical background.....	113
8.2.1	Physico-chemical remediation	114
8.2.2	Biological methods	115
8.3	Materials and methods.....	119
8.3.1	“Werk Tanne” at Clausthal-Zellerfeld: CTNT2, CTNT3, CTNT4	119
8.3.2	Elsnig near Torgau: ETNT	121
8.3.3	Hambühren: LTNT.....	122
8.4	Results	123
8.4.1	„Werk Tanne“ at Clausthal-Zellerfeld	123
8.4.2	Elsnig near Torgau	126
8.4.3	Hambühren	127
8.4.4	Summary of results	129
8.5	Discussion	130
8.5.1	Evaluation of the remediation processes	130
8.5.2	Comparison with literature.....	135

List of figures

Fig. 4.2-1:	Structural formula of TNT.....	12
Fig. 4.2-2:	Structural formula of Hexyl.....	14
Fig. 4.2-3:	Structural formula of Hexogen	15
Fig. 4.2-4:	Structural formula of Octogen	16
Fig. 4.2-5:	Structural formula of TAT	17
Fig. 4.4-1:	Concentration-effect relationship for TNT in standard soil material Lufa 2.2.....	20
Fig. 4.4-2:	Surviving <i>E. crypticus</i> of a mortality test with various concentrations of TNT-contaminated soil materials.	20
Fig. 4.4-3:	Cocoon rates for <i>E. crypticus</i> transferred from different concentrations of TNT-contaminated soil materials onto agar-agar	22
Fig 4.4-4.:	Hatching rates for the cocoons laid 1-3 days after the transfer of the adult <i>E. crypticus</i> from TNT-contaminated soil materials.....	23
Fig. 4.4-5:	Concentration-effect relationship for TNT in the contact test with <i>F. candida</i> and in the water test with <i>E. crypticus</i>	23
Fig. 4.4-6:	Distribution of <i>E. crypticus</i> in a separated test set of a choice test with TNT	26
Fig. 4.4-7:	Distribution of <i>E. crypticus</i> in a separated test set of a choice test with TNT after 7 days of ageing	27
Fig. 4.4-8:	Concentration-effect relationship with Hexyl for <i>F. candida</i> and <i>E. crypticus</i> . The data for mortality and reproduction are given in relation to the values in the standard soil material Lufa 2.2	28
Fig. 4.4-9:	Reproduction rates of <i>F. candida</i> transferred from a mortality test in various Hexyl-contaminated soil materials into uncontaminated soil material.....	29
Fig. 4.4-10:	Photos of surviving <i>E. crypticus</i> from a mortality test in various concentrations of Hexyl-contaminated soil materials.....	30
Fig. 4.4-11:	Cocoons laid by worms out of the control and cocoons laid by worms out of Hexyl-contaminated soil material immediately after the transfer.....	30
Fig. 4.4-12:	Cocoon rates for <i>E. crypticus</i> transferred from different concentrations of Hexyl-contaminated soil materials onto agar-agar	31
Fig. 4.4-13:	Hatching rates of cocoons laid 1-3 days after the transfer of adult <i>E. crypticus</i> from various Hexyl-contaminated soil materials onto agar-agar	32
Fig. 4.4-14:	Hatching rate of cocoons laid 4-6 days after the transfer of adult <i>E. crypticus</i> from various Hexyl-contaminated soil materials onto agar-agar	33

Fig. 4.4-15: Hatching rates of cocoons laid 7-9 days after the transfer of adult <i>E. crypticus</i> from various Hexyl-contaminated soil materials onto agar-agar	34
Fig. 4.4-16: Distribution of <i>F. candida</i> in a separated test set of a choice test with Hexyl	35
Fig. 4.4-17: Distribution of <i>E. crypticus</i> in a separated test set of a choice test with Hexyl.	36
Fig. 4.4-18: Concentration-effect relationship for TAT with <i>F. candida</i> and <i>E. crypticus</i>	40
Fig. 4.4-19: Concentration-effect relationship for TAT in the water tests with <i>F. candida</i> and <i>E. crypticus</i>	40
Fig. 4.4-20: Distribution of <i>E. crypticus</i> in a separated test set of a choice test with TAT.....	42
Fig. 5.3-1: Distribution of grain size in the Lufa soil materials.....	61
Fig. 5.3-2: Content of organic carbon in the reference soil materials.....	61
Fig. 5.4-1: Mortality and reproduction rate in different reference soil materials for <i>F. candida</i> and <i>E. crypticus</i>	63
Fig. 5.4-2: Concentration-effect relationship for TNT in the reference soil material Lufa 2.3 with <i>F. candida</i> and <i>E. crypticus</i>	63
Fig. 5.4-3: Concentration-effect relationship for TNT in the reference soil material Lufa 3 with <i>F. candida</i> and <i>E. crypticus</i>	64
Fig. 5.4-4: Concentration-effect relationship for TNT in the reference soil material Lufa 4 with <i>F. candida</i> and <i>E. crypticus</i>	64
Fig. 5.4-5: Concentration-effect relationship for TNT in the potting soil with <i>F. candida</i> and <i>E. crypticus</i>	65
Fig. 5.4-6: LC50(7d)- and EC50(28d)-values in the different reference soil materials with <i>F. candida</i> and <i>E. crypticus</i>	66
Fig. 6.2-1: Possible intermediates and condensation products of TNT originating from gratuitous reduction.....	73
Fig. 6.4-1: Reproduction rates for <i>F. candida</i> in soil materials aged at different temperatures for the two lowest tested concentrations.....	79
Fig. 6.4-2: LC50(7d)-values for <i>F. candida</i> in TNT-contaminated soil materials aged at 4°C and 20°C in comparison to unaged soil material indicated by the line.	80
Fig. 6.4-3: Reproduction rates for <i>F. candida</i> in TNT-contaminated soil materials aged at different temperatures for the two lowest tested concentrations.	82
Fig. 6.4-4: Mortality and reproduction rates for <i>F. candida</i> in TNT-contaminated soil materials aged at 20°C.....	84
Fig. 6.4-5: LC50(7d)- and EC50(28d)-values for <i>F. candida</i> in TNT-contaminated soil materials aged at 20°C.....	85

Fig. 7.4-1:	Concentration-effect relationship with CTNT1a in dilution with the standard soil material Lufa 2.2 for <i>F. candida</i> and <i>E. crypticus</i>	98
Fig. 7.4-2:	Concentration-effect relationship with CTNT2a in dilution with the standard soil material Lufa 2.2 for <i>F. candida</i> and <i>E. crypticus</i>	99
Fig. 7.4-3:	Concentration-effect relationship with CTNT4a in dilution with the standard soil material Lufa 2.2 for <i>F. candida</i> and <i>E. crypticus</i>	100
Fig. 7.4-4:	Concentration-effect relationship with ETNTa in dilution with the standard soil material Lufa 2.2 for <i>F. candida</i> and <i>E. crypticus</i>	102
Fig. 7.4-5:	Concentration-effect relationship with LTNT1a for <i>F. candida</i> and <i>E. crypticus</i> ..	103
Fig. 7.4-6:	LC50(7d)- and EC50(28d)-values for the TNT-contaminated soil materials in dilution with Lufa 2.2 for <i>F. candida</i> and <i>E. crypticus</i>	104
Fig. 8.2-1:	Flow chart of a soil washing process by the AB Umwelttechnik GmbH	115
Fig. 8.2-2:	Microbial reduction of TNT	117
Fig. 8.4-1:	Mortality and reproduction rates of <i>F. candida</i> and <i>E. crypticus</i> in the contaminated soil material CTNT2a and the remediated soil material CTNT2aVA from the ammunition plant “Werk Tanne” at Clausthal-Zellerfeld (Lower Saxony, Germany).....	124
Fig. 8.4-2:	Mortality and reproduction rates of <i>F. candida</i> and <i>E. crypticus</i> in the contaminated soil material CTNT2a and the remediated soil material CTNT3b from the ammunition plant “Werk Tanne” at Clausthal-Zellerfeld (Lower Saxony, Germany).....	125
Fig. 8.4-3:	Mortality and reproduction rates of <i>F. candida</i> and <i>E. crypticus</i> in the contaminated soil material CTNT4a and the remediated soil materials CTNT4b, CTNT7b as well as in the uncontaminated soil material CTNT04a before and after the remediation (CTNT04b) from the munition plant “Werk Tanne” (Lower Saxony, Germany).....	126
Fig. 8.4-4:	Mortality and reproduction rates of the original soil material LTNTa from Hambühren (Lower Saxony, Germany) and the two soil fractions LTNT1b and LTNT1c after the washing process in the stationary soil washing plant of the ABU at Lagersdorf	128
Fig. 8.4-5:	Concentration-effect relationship with LTNT1b for <i>F. candida</i> and <i>E. crypticus</i> ..	129

List of tables

Table 3.3-1: Overview of the used statistical tests.....	9
Table 3.3-2: Overview of the biotest-systems with <i>E. crypticus</i> and <i>F. candida</i>	10
Table 4.3-1: Properties of explosives	18
Table 4.4-1: Cocoon rates for <i>E. crypticus</i> transferred from different concentrations of TNT-contaminated soil materials onto agar-agar.....	21
Table 4.4-2: Hatching rates for the cocoons laid 1-3 days after the transfer of adult <i>E. crypticus</i> from different concentrations of TNT-contaminated soil materials ..	22
Table 4.4-3: LC 50 values of TNT for <i>F. candida</i> in the contact test and <i>E. crypticus</i> in the water test after 24, 48 and 72 hours	24
Table 4.4-4: Distribution of <i>F. candida</i> in a separated test set with TNT	25
Table 4.4-5: Distribution of <i>E. crypticus</i> in a separated test set with TNT	25
Table 4.4-6: Distribution of <i>E. crypticus</i> in a separated test set with TNT after an ageing period of 7 days.....	26
Table 4.4-7: Mortality for <i>F. candida</i> with Hexyl.....	28
Table 4.4-8: Number of adults transferred from the Hexyl-contaminated soil materials onto the uncontaminated soil material, number of adults found after a test period of three weeks and the reproduction rate after 3 weeks	29
Table 4.4-9: Cocoon rate for <i>E. crypticus</i> transferred from different concentrations of Hexyl-contaminated soil materials onto agar-agar.....	31
Table 4.4-10:Hatching rates for the cocoons laid 1-3 days after the transfer of adult <i>E. crypticus</i> from different concentrations of Hexyl-contaminated soil materials	32
Table 4.4-11:Hatching rates for the cocoons laid 4-6 days after the transfer of adult <i>E. crypticus</i> from different concentrations of Hexyl-contaminated soil materials	33
Table 4.4-12:Hatching rates for the cocoons laid 7-9 days after the transfer of adult <i>E. crypticus</i> from different concentrations of Hexyl-contaminated soil materials	33
Table 4.4-13:Distribution of <i>F. candida</i> in a separated test set with Hexyl.....	34
Table 4.4-14:Distribution of <i>E. crypticus</i> in a separated test set with Hexyl	35
Table 4.4-15:Mortality and reproduction rates for <i>F. candida</i> and <i>E. crypticus</i> with Hexogen ..	37

Table 4.4-16: Distribution of <i>F. candida</i> and <i>E. crypticus</i> in a combined test set with Hexogen	37
Table 4.4-17: Mortality and reproduction rates for <i>F. candida</i> and <i>E. crypticus</i> with Octogen ...	38
Table 4.4-18: Distribution of <i>F. candida</i> and <i>E. crypticus</i> in a combined test set with Octogen	38
Table 4.4-19: Mortality and reproduction rates for <i>F. candida</i> and <i>E. crypticus</i> with TAT	39
Table 4.4-20: LC 50 values of TAT for <i>F. candida</i> and <i>E. crypticus</i> in the water test after 24, 48 and 72 hours	41
Table 4.4-21: Distribution of <i>F. candida</i> in a separated test set with TAT	41
Table 4.4-22: Distribution of <i>E. crypticus</i> in a separated test set with TAT	41
Table 4.4-23: Summary of the results with the soil and non-soil tests	43
Table 4.5-1: Overview of the toxicities of TNT, Hexyl, Hexogen, Octogen and TAT to different test organisms in respect to mortality and reproduction	54
Table 4.5-2: Comparison of the sensitivity of the tests for the two test organisms for the tested explosives and TAT	56
Table 5.3-1: Comparison of chemical and physical properties of the different reference soil materials with the usual standard soil material Lufa 2.2 indicated by shading ...	60
Table 5.4-1: Comparison of the mortality and the reproduction rate in uncontaminated reference soil materials with the usual standard soil material Lufa 2.2 indicated by shading	62
Table 5.4-2: LC50(7d)- and EC50(28d)-values for TNT in different reference soil materials for <i>F. candida</i> and <i>E. crypticus</i> in comparison to the usually used standard soil material Lufa 2.2 indicated by shading	65
Table 5.5-1: Soil properties of different uncontaminated soil materials and mean of the reproduction rate in percent in relation to the usual standard soil material Lufa 2.2 for <i>F. candida</i> and <i>E. crypticus</i>	68
Table 6.4-1: Concentrations of TNT and the ADNTs detected in the spiked soil samples after different ageing periods	75
Table 6.4-2: Concentrations of TNT and the ADNTs detected in the spiked soil samples after different ageing periods at the beginning and the end of the reproduction test	76
Table 6.4-3: Mortality for <i>F. candida</i> with TNT-contaminated soil material stored at 4°C after different periods of ageing	77

Table 6.4-4: Mortality for <i>F. candida</i> with TNT-contaminated soil materials stored at 20°C after different periods of ageing	78
Table 6.4-5: LC50(7d)-values for <i>F. candida</i> in TNT-contaminated soil materials aged at 4°C and 20°C in comparison to the one without ageing indicated by shading....	79
Table 6.4-6: Reproduction rates for <i>F. candida</i> with TNT-contaminated soil materials stored at 4°C after different periods of ageing	80
Table 6.4-7: Reproduction rates for <i>F. candida</i> with TNT-contaminated soil materials stored at 20°C after different periods of ageing	81
Table 6.4-8: Mortality for <i>F. candida</i> with TNT-contaminated soil materials stored at 20°C after different periods of ageing	82
Table 6.4-9: Reproduction rates for <i>F. candida</i> with TNT-contaminated soil materials stored at 20°C after different periods of ageing	83
Table 6.4-10:LC50(7d)-and EC50(28d)-values for <i>F. candida</i> in TNT-contaminated soil materials aged at 20°C in comparison to the one without ageing indicated by shading	85
Table 6.4-11:LC50(7d)- and EC50(28d)-values for <i>F. candida</i> determined in both test sets.....	85
Table 7.3-1: Soil Parameters and contaminations above the German intervention values for the contaminated soils materials from the four sites	96
Table 7.3-2: Reference values and the soil reference value formulas for some metals	97
Table 7.3-3: Calculated EC50-values for some metals in the tested soil materials	97
Table 7.4-1: Mortality and reproduction rate with CTNT1 for <i>F. candida</i> and <i>E. crypticus</i> in relation to control with Lufa 2.2.....	98
Table 7.4-2: Mortality and reproduction rate with CTNT2a for <i>F. candida</i> and <i>E. crypticus</i> in relation to control with Lufa 2.2.....	99
Table 7.4-3: Mortality and reproduction rate with CTNT4a for <i>F. candida</i> and <i>E. crypticus</i> in relation to control with Lufa 2.2.....	100
