Charge-Carrier Dynamics in Solids and Gases Observed by Time-Resolved Terahertz Spectroscopy

Im Fachbereich Physik
der Freien Universität Berlin
eingereichte Dissertation

Tobias Kampfrath

Dezember 2005

Diese Arbeit entstand in der Arbeitsgruppe von
Prof. Dr. Martin Wolf an der Freien Universität Berlin.

Berlin, im Dezember 2005

Erstgutachter:	Prof. Dr. Martin Wolf
Zweitgutachter:	Prof. Dr. Rolf Diller
Drittgutachter:	Prof. Dr. Thomas Elsässer
Tag der Disputation:	30. Januar 2006

Contents

Introduction **1**

1. Theoretical Background **5**
1.1. Ultrafast Processes in Optically Excited Metals 5
1.2. Model Hamiltonian of a Crystalline Solid 7
1.3. Population Dynamics and 2-Temperature Model 8
1.3.1. Rate Equations 8
1.3.2. 2-Temperature Model for Metals 9
1.4. What Is Measured in an Optical Experiment? 10
1.4.1. Induced Electric Polarization 11
1.4.2. Dielectric Function ε 11
1.5. Microscopic Models for ε 13
1.5.1. Classical Models 13
1.5.2. Semiclassical Theory: Boltzmann Equation 14
1.5.3. Quantum-Mechanical Theory: Kubo Formula 15
1.5.4. Local Electric Field 16
1.6. Optical Transitions in Crystalline Solids 16
1.6.1. Direct Optical Transitions 17
1.6.2. Indirect Optical Transitions 19
1.7. Remarks 20
1.8. Rapidly Changing Sample 21
1.8.1. General Linear Response 21
1.8.2. Instantaneous Spectral Response 22

2. Nonlinear Wave Propagation **25**
2.1. Wave Equation 25
2.2. Linear Optics 25
2.3. Nonlinear Polarization: 2 Examples 26
2.3.1. Sum- and Difference-Frequency Mixing: THz Generation and Detection 26
2.3.2. Pump-Probe Experiments 28
2.4. Solution of Wave Equation: Perturbational Approach 30
2.5. 1-Dimensional Case 32
2.5.1. Film between 2 Half-Spaces 32

2.6. Applications . . . 34
2.6.1. THz Generation in GaSe . . . 34
2.6.2. Probe-Pulse Propagation . . . 35

3. Experimental Details **37**
3.1. Laser Systems . . . 37
3.1.1. MHz-Laser Oscillator . . . 37
3.1.2. kHz-Amplified Laser System . . . 38
3.2. THz Spectrometer . . . 39
3.2.1. THz Generation . . . 40
3.2.2. THz Detection . . . 41
3.2.3. Computer-Controlled Data Acquisition . . . 41
3.2.4. Technical Data . . . 42
3.2.5. Sample Requirements . . . 43
3.3. Work Sequence of THz Spectroscopy . . . 43
3.4. Extraction of the Dielectric Function . . . 45
3.4.1. Steady-State Measurements . . . 45
3.4.2. Pump-Probe Measurements . . . 45

4. Graphite: Strongly Coupled Optical Phonons in Action **47**
4.1. Motivation . . . 47
4.2. General Properties . . . 48
4.2.1. Highly Oriented Pyrolytic Graphite . . . 49
4.3. Electronic Structure . . . 49
4.3.1. Graphene: Tight-Binding Model . . . 50
4.3.2. Slonczewski-Weiss-McClure Model . . . 51
4.4. Phonons and Their Coupling to Electrons . . . 53
4.5. Optical Properties . . . 54
4.6. Experimental and Technical Details . . . 55
4.6.1. Sample Preparation . . . 55
4.6.2. Sample Pumping and Probing . . . 56
4.6.3. Data Analysis . . . 57
4.7. Results: Unexcited Sample . . . 59
4.7.1. Dielectric Function Between 1 and 3 THz . . . 59
4.7.2. Dielectric Function Between 8 and 27 THz . . . 60
4.8. Results: Excited sample . . . 62
4.8.1. Raw Data . . . 62
4.8.2. Dynamics of the Dielectric Function and Model Fits . . . 63
4.8.3. Plasma-Frequency Decay: Consistency Check . . . 65
4.8.4. Temperature Decay: Ultrafast Generation of Few Optical Phonon Modes . . . 66
4.8.5. Drude Scattering Rate . . . 68
4.9. Conclusion and Outlook . . . 69

5. Carbon Nanotubes: Excitons, Localized and Delocalized Carriers 71
5.1. Motivation . . . 71
5.2. General Properties . . . 72
5.3. Electronic Structure . . . 72
5.3.1. Single-Particle Picture . . . 74
5.3.2. Many-Body Effects . . . 74
5.3.3. Impurity-Induced Carrier Localization . . . 75
5.4. Phonons . . . 76
5.5. Optical Properties . . . 76
5.6. Ultrafast Dynamics in Optically Excited Carbon Nanotubes . . . 77
5.7. Experimental and Technical Details . . . 79
5.7.1. Sample Preparation . . . 79
5.7.2. Sample Pumping and Probing . . . 80
5.7.3. Data Analysis . . . 81
5.8. Results: Unexcited Sample . . . 84
5.9. Results: Excited Sample . . . 85
5.9.1. No Response of Free Charge Carriers . . . 85
5.9.2. Pump-Induced Anisotropy and Carrier Localization . . . 87
5.9.3. Bleaching in Small-Gap Tubes . . . 90
5.9.4. Increased Absorption by Intraexcitonic Transitions? . . . 90
5.10. Conclusion and Outlook . . . 91

6. Optically Ionized Gases: Long- and Short-Lived Electrons 93
6.1. Motivation . . . 93
6.2. Partially Ionized Gases and Plasmas . . . 94
6.3. Dynamics of Optically Ionized Gases . . . 95
6.4. Optical Properties of a Plasma . . . 96
6.5. Experimental and Technical Details . . . 97
6.5.1. Sample . . . 97
6.5.2. Sample Pumping and Probing . . . 97
6.5.3. Data Analysis . . . 99
6.6. Results: Dynamics of the Free-Electron Density . . . 102
6.6.1. Ar: Long-Lived Free Electrons . . . 103
6.6.2. O_2: Dissociative Recombination . . . 104
6.6.3. SF_6 in Ar: Electron Scavenger in Action . . . 105
6.7. Results: Electron Collision Rate . . . 107
6.7.1. Modeling the Dielectric Function . . . 108
6.7.2. Indication of Strong Electron-Electron Scattering? . . . 110
6.8. Conclusion and Outlook . . . 111

Summary 113

A. Frequently Used Quantities and Abbreviations 117

B. Mathematical Definitions and Theorems **119**

C. Details of Numerical Calculations for Graphite **121**
C.1. Direct Optical Transitions in Graphite 121
C.2. 2-Temperature Model for Graphite 121
C.3. Indirect Optical Transitions in Graphite 123

Bibliography **125**
