Fig. 40. Stratigraphic correlation between key sections in Hunan province

Fig. 41. Sediment transport direction

Fig. 42. Evidence of mass wasting

Fig. 43. Schematic ideal sequence of gravity-induced facies

Fig. 44. Proposed sedimentary evolution for the allochthonous deposits

Fig. 45. Geographic and tectonic location of the study area

Fig. 46. Paleoenvironmental reconstruction

Fig. 47. Schematic stratigraphic column

Fig. 48. Correlation diagram between slope sections

Fig. 49. Photographs illustrating Facies 1

Fig. 50. Photographs illustrating Facies 2

Fig. 51. Evidence in thin sections of evaporite presence

Fig. 52. Outcrop photographs of Facies 3

Fig. 53. Stratigraphic columns of Wuhe and Xikou sections

Fig. 54. Outcrop photographs of olistoliths at Xikou section

Fig. 55. Relative dating of sliding

Fig. 56. Evaporite-mediated brecciation

Fig. 57. Possible mechanism and sequence of slide initiation

Fig. 58. Synthesis of the sedimentary evolution of the Yangtze platform

Table 1. Summarizing table of Ediacaran Yangtze platform facies

Table 2. Database for drawing maps of Figs. 13 and 14

Table 3. Summary table of the shelf facies

Table 4. Summary table of slope facies
