

## Acknowledgements

The work presented in this dissertation has been strongly influenced by a lot of feedback we received from the users of World Wide Radio, the E-Chalk system, and the GIMP implementation of SIOX, so there are a number of people who actually deserve credit. Unfortunately, time and space are limited, which forces me to cut this list down to a bare handful.

First of all I would like to thank Stiftung Jugend forscht e.V. for the continuous encouragement they give to young people to start scientific projects. I still draw on the motivation and inspiration I received during the few days of the “Bundeswettbewerb” in Munich in 1998. In this context I would like to thank the early inspirers and helpers of the World Wide Radio System, namely Olav Surawski and Tobias Lasser. I would like to thank Maximilian Benker for letting me encode the GIOVE lectures using WWR2 and Bernhard Frötschl for his helping hand on the early implementation of WWR2.

I want to thank all the contributors to the E-Chalk system who are listed in Appendix A and all those who I might have forgotten. Of course, I would like to thank my colleagues Kristian Jantz, Benjamin Jankovic, Ernesto Tapia, Karl Pauls, Tobias Lenz, and also Richard S. Hall, who has been an important mentor to me. I thank Lars Knipping with whom I shared both trouble and success. I would like to thank my colleague Christian Zick for his support whenever I needed it and the preparation of numerous test photos and video sequences during the entire time. I would like to thank Sven Neumann, maintainer of GIMP, as well as many other open source developers for their time-consuming efforts in optimizing the SIOX algorithm.

Credit also goes to Theda Radtke and Ulrich Kernbach at the “Deutsches Museum”, Guido Reuter, and the MOSES team at Technische Universität Berlin. I would also like to credit CSEM and PMD Technologies for providing us with time-of-flight 3D cameras and Opticom for providing us with the Opera software. Special thanks go to Hans-Ulrich Kobialka who provided us with a stereo camera. I would like to thank Peter Monnerjahn, who spent many days polishing my English, as well as Robert Mertens, Kristian Jantz, Christian Zick, Benjamin Jankovic, and David Schneider for reviewing several chapters.

I would like to thank my family and most importantly my wife, Yvonne. Her love and support and her patience during the development of this project have given me the strength to carry out the work that resulted in this dissertation. Finally, I would like to thank my supervisor, Raúl Rojas, for always having an open door and providing me with a lot of freedom and a working environment that allowed me to be creative.
