

In Situ Gelling Nasal Inserts for Prolonged Drug Delivery

Inaugural-Dissertation
zur Erlangung der Doktorwürde
im Fachbereich Biologie, Chemie, Pharmazie
der Freien Universität Berlin

vorgelegt von
Ulrike Werner

Berlin 2003

1. Gutachter: Prof. Dr. Roland Bodmeier

2. Gutachter: Prof. Dr. Philippe Maincent

Tag der mündlichen Prüfung: 19.11.2003

Acknowledgements

First of all, I wish to express my gratitude to my supervisor, Prof. Dr. Roland Bodmeier, for his kind supervision, his helpful advice and professional guidance, for providing this interesting research topic and his scientific support. It was a great experience and pleasure to study, to work and to do research in his international group.

I deeply thank Prof. Dr. Philippe Maincent (Faculté de Pharmacie, Université Poincaré, Nancy, France) for useful discussions and for his evaluation of my thesis. I am also very grateful to Dr. Christiane Damgé (Centre Européen d'Etude du Diabète, Université Louis Pasteur, Strasbourg, France). The opportunity to work in her research group was extremely valuable for me and my studies.

I would like to thank all the helpful people at the Free University Berlin for giving me the opportunity to use advanced methods of instrumental analytics and their kind help in data interpretation: Priv.-Doz. Dr. Gerd Buntkowsky and Thomas Emmler (Institute of Chemistry) for performing the ^{13}C -CP/MAS NMR measurements, Prof. Ronald Gust and Ingo Ott (Institute for Pharmacy) for atom absorption spectroscopy studies, Bernhard Behrens (Institute for Chemistry) for atom emission spectroscopic measurements, Priv.-Doz. Dr. Wolf-Dietrich Hunnius (Institute for Chemistry) for performing FT-Raman investigations, Dr. Volker Bähr and Petra Exner (University Hospital B. Franklin) for the support with radioimmunoassays, and Dr. Christine Prusas (Institute for Poultry diseases) for providing chicken erythrocytes.

Furthermore, I am grateful to Prof. Dr. Ronald Gust, Prof. Dr. Hans Hubert Borchert, Priv.-Doz. Dr. Ralph Lipp, Dr. Wolfgang Mehnert and Boris Petri for serving as members of my thesis advisor committee.

I sincerely wish to thank Dirk Sticha, Heike Friedrich, Oliver Bley, Katrin Johannsen, Mesut Ciper, and all my friends and colleagues in the Kelchstraße for their support, proof-readings, constructive discussions in early Monday seminars and the stimulating and enjoyable atmosphere in the group. I am grateful to Dr. Jürgen Siepmann for his readiness to discuss my work and his valuable suggestions. Special thanks go also to Andreas Krause and Eva Ewest for their support and to Angelika Schwarz for her help in the jungle of university bureaucracy.

Finally, I want to thank Matthias and my family for their love and support through the years and their never-ending encouragement and confidence in me.

Table of Contents

1. INTRODUCTION.....	1
1.1. Transmucosal routes of drug delivery.....	1
1.1.1. Nasal drug delivery.....	3
1.1.2. Buccal drug delivery.....	4
1.1.3. Ocular drug delivery.....	4
1.1.4. Pulmonary drug delivery.....	6
1.1.5. Rectal drug delivery.....	7
1.1.6. Vaginal drug delivery.....	8
1.1.7. Comparison of transmucosal drug delivery routes.....	8
1.2. Nasal anatomy and physiology.....	12
1.2.1. Anatomy and air passage.....	12
1.2.2. Physiology.....	13
1.2.3. Nasal pathology with relevance to nasal drug absorption.....	20
1.2.4. The nose as drug delivery site: advantages, barriers, and solutions.....	21
1.3. The concept of bioadhesion.....	24
1.4. Nasal vaccination.....	27
1.4.1. Nasal immunology.....	27
1.4.2. Nasal vaccine delivery.....	29
1.5. Nasal drug delivery systems.....	34
1.5.1. Nasal solutions as drops or sprays.....	36
1.5.2. Viscous nasal solutions and gels including bioadhesive solutions.....	38
1.5.3. Nasal suspensions and emulsions.....	41
1.5.4. Nasal micellar and liposomal formulations.....	42
1.5.5. Nasal powders and microparticles.....	43
1.5.6. Nasal solid dosage forms.....	48
1.6. Research objectives.....	49

Table of Contents

2. MATERIALS AND METHODS.....	51
2.1. Materials.....	51
2.2. Methods.....	52
2.2.1. General data presentation in diagrams and tables.....	52
2.2.2. Preparation of samples.....	52
2.2.3. Polymer solution rheology.....	54
2.2.4. Spreading of polymer solutions.....	55
2.2.5. Bioadhesion.....	55
2.2.6. Water uptake and mass loss.....	55
2.2.7. Moisture sorption.....	56
2.2.8. Contact angle.....	57
2.2.9. Polymer-drug precipitation.....	58
2.2.10. In vitro drug release.....	58
2.2.11. Release of M β CD.....	62
2.2.12. Flame absorption and flame emission spectroscopy.....	62
2.2.13. Scanning electron microscopy (SEM).....	63
2.2.14. Differential scanning calorimetry (DSC).....	63
2.2.15. Powder X-ray diffraction.....	63
2.2.16. ^{13}C Nuclear magnetic resonance spectroscopy (^{13}C CP/MAS NMR).....	64
2.2.17. FT-Raman spectroscopy.....	64
2.2.18. Mechanical properties.....	64
2.2.19. Hemagglutination test.....	65
2.2.20. In vivo studies.....	65
3. RESULTS AND DISCUSSION.....	69
3.1. Influence of the polymer type.....	69
3.1.1. Sponge-structure formation.....	69
3.1.2. Polymer solution rheology.....	71
3.1.3. Effect of polymer type on nasal insert properties.....	75
3.2. Drug release rate control.....	85
3.2.1. Polymer content.....	85

Table of Contents

3.2.2. Freely water-soluble additives.....	88
3.2.3. Polymer molecular weight.....	91
3.2.4. Polymer blends.....	99
3.3. Effect of drug and release medium on drug release.....	108
3.3.1. Influence of drug species and drug loading.....	108
3.3.2. Influence of release medium.....	115
3.4. Estradiol delivery.....	121
3.5. Nasal influenza vaccination.....	138
3.5.1. In vitro properties of polymer solutions.....	138
3.5.2. In vivo performance of polymer solutions.....	143
3.5.3. Formulation and in vitro properties of nasal inserts.....	146
3.5.4. Hemagglutination activity in solutions and inserts.....	149
3.5.5. In vivo performance of nasal inserts.....	151
4. SUMMARY.....	155
5. ZUSAMMENFASSUNG.....	161
6. BIBLIOGRAPHY.....	167
LIST OF PUBLICATIONS FROM THIS WORK.....	189
CURRICULUM VITAE.....	191
