

# Acknowledgements

First of all I would like to thank my tutor, Prof. Dr. Martin Weinelt, for his understanding, unconditional support and help, which it has been decisive for me to accomplish this thesis. Since we met, he has made the effort to get the best out of me. Thank you for all your teachings, I am aware I am not the best accepting criticism. Thank you, Martin, for making me feel part of your team. If I could choose a professor again, with no doubt you would be the lucky one.

I wish to acknowledge like to thank Prof. Dr. Wolf Widdra for giving me the chance to come to Berlin, one of the most exciting cities I have lived in.

I thank Prof. Dr. Martin Wolf, my second tutor, for all the wise advices, his attention and good mood. He has always been a reference in the collaboration which led to the gadolinium chapter of this thesis. He is a bright physicist and it has always been very clarifying talking with him.

Dr. Tanja Giessel and I have worked side by side through half of my thesis (chapters regarding vanadium dioxide and silicon). She helped me to step forward in a moment of disorientation, she offered me a project and a lot of work. She was for me a tutor, a colleague and what's more important, a friend. From her I learned not only to measure and survive to synchrotron beamtimes, but also *dass manchmal Physik macht Spaß*. It has been both fun and gratifying working with her and Dr. Ramona Weber. Ramona taught me everything I know about lasers. There were unforgettable beamtimes, working the three ladies together in the design, optimization and carrying out of time-resolved experiments combined laser-synchrotron setup in what it was the U125/1 PGM beamline at BESSY.

Thanks to Dr. Uwe Bovensiepen, Dr. Alexey Melnikov and Dr. Martin Lisowski (Prof. Dr. Martin Wolf's group) for one of the most intense beamtimes I ever had. There were almost five non stop work weeks we spent at BESSY. As I already mentioned the gadolinium's chapter is a result of this collaboration. Thanks a lot for the very useful talks on magnetism and lasers. I am grateful to Alexey for his help and advice in writing the gadolinium chapter. Thanks to Martin for his temperature analysis which helped us to find the final interpretation of the results of the beamtime. I also want to thank him for his good mood and availability.

I wish to acknowledge Roland Schmidt for being my project partner and friend. His special gentlemanliness and easy way behavior made our beamtimes together great fun. Roland has the ability to soften the hard times. Also, he had to put up sometimes with my stress and bad mood. Thank you for being there.

I wish also to acknowledge all the A1 group members for creating a pleasant and

cheerful work atmosphere. Among them and with no preferences: Anke, David, Picko, Fabian, Andreas, Ilja, Daniel, Cornelius, Christian, Jens, Irina, Arkadi.

Thanks to Alexandre for his happiness and support while finishing the thesis, both of us at the same time. Thanks to Jörg for his advice and his tips on "what to do next". Lots of thanks to Dr. Thomas Schultz for his everlasting smile and his friendship, our german-spanish-english lessons were unbeatable.

Ich möchte mich besonders herzlich bei den Technikern des Max-Born-Instituts für ihre Hilfe, ihre Hingabe und ihr Verständnis während der oft stressigen Momente der Bessy-Strahlzeiten bedanken. Ich danke Roman Peslin für seine feinmechanischen Kenntnisse, seine gute Laune, seine Offenheit und seine Freundschaft. Dank gebührt auch Reinhard Grosser für seine Unterstützung beim UHV-System und seine Hilfe, wenn die Kammer das wohl tausendste Mal ausgeheizt werden musste. Ebenso möchte ich mich bei Rainer Schumann für seine Unterstützung bei Computer- und Laserproblemen bedanken.

I am very grateful to the BESSY staff for their help and interest to all the beam-times of every different projects I carried out at BESSY.

I want to thank all my friends who have supported me through all these years and maybe I have not been able to return their affection as they surely deserved.

I thank my whole numerous family for all the care, love and sentimental support that they offered me throughout my stay in Germany, visiting me and sending me Spanish supplies.

En especial a mi madre por su inagotable fuerza, alegría y tenacidad, a mi padre por su presencia y su recuerdo, y a mi hermana Chari por ser y seguir siendo mi compañera de batallas.

Por último y con un especial cariño quiero agradecer a mi amor Manolo, su apoyo incondicional que me ha ofrecido durante el tiempo que ha transcurrido mi tesis. Sus pequeñas dosis de locura matinal, su amor, su mirada, su sensibilidad, sus consejos objetivos, gracias por los buenos tiempos vividos y por los que nos quedan por vivir.

---

## GRATITUD

Gracias aroma  
azul,  
fogata encelo.

Gracias pelo  
caballo  
mandarino.

Gracias pudor  
turquesa  
embujo  
vela,  
llamarada  
quietud  
azar delirio.

Gracias a los racimos  
a la tarde,  
a la sed  
al fervor  
a las arrugas,  
al silencio  
a los senos  
a la noche,  
a la danza  
a la lumbre  
a la espesura.

Muchas gracias al humo  
a los microbios,  
al despertar  
al cuerno  
a la belleza,  
a la esponja  
a la duda  
a la semilla  
a la sangre  
a los toros  
a la siesta.

Gracias por la ebriedad,  
por la vagancia,  
por el aire  
la piel  
las alamedas,

por el absurdo de hoy  
y de mañana,  
desazón  
avidez  
calma  
alegría,  
nostalgia  
desamor  
ceniza  
llanto.  
Gracias a lo que nace,  
a lo que muere,  
a las uñas  
las alas  
las hormigas,  
los reflejos  
el viento  
la rompiente,  
el olvido  
los granos  
la locura.  
Muchas gracias gusano.  
Gracias huevo.  
Gracias fango,  
sonido.  
Gracias piedra.  
Muchas gracias por todo.  
Muchas gracias.  
Helena Prima, agradecida.

Helena Prima after Oliverio Girondo
