

Acknowledgements

The present study was conducted within the framework of the interdisciplinary research project SFB 267 – “Deformation Processes in the Andes”, funded by the Deutsche Forschungsgemeinschaft (DFG). These investigations would not have been possible without financial support from the Freie Universität Berlin.

Sincere thanks go to my supervisor Christoph Heubeck for providing me this interesting research topic, supporting and assisting throughout the scientific discourse, and correcting this thesis. I also want to thank Ekkehard Scheuber for helpful suggestions and for being second advisor for this thesis. Furthermore, I want to thank my colleague Cornelius Uba for his critical comments.

I feel much obligated to Chaco S.A. for their financial and logistical support, as well as the generous supply with 2D-seismic, well logs, and stratigraphic information. I especially want to thank Nigel Robinson, Oscar Aranibar, Fernando Alegría, Adolfo Rosales, René Daza, Jaime Soliz and Eloy Martínez.

My thesis would not be possible without the helping hands of many people during our time abroad, e.g. Edwin Barroso from EquiPetrol and his colleagues, my field assistants Mario and Laure, my Spanish teacher Selma Gutschmann, as well as J.G. Viramonte and others from the UNSA in Argentina.

I am indebted to Benjamin Sames, Kai-Uwe Gräfe, Michael Schudack, Frank Wiese, Rafael Herbst, and Peter Sprechmann for excellent assistance with the interpretation of the Yecua facies. Many thanks also go to Benjamin Sames, Carina Hoorn, and Susan Beck for editing the Yecua manuscript.

I would like to thank a lot Maja Wegmann and Ulrich Struck for the isotope data analyses.

Many thanks go to Konrad Hammerschmidt for fruitful discussions and a helping hand during the interpretation of our geochemical data as well as reading parts of this thesis.

For intensive help during isotopic age determination I want to thank a lot Igor Villa.

I want to thank Charlotte Krawczyk, David Tanner, Tina Lohr, and David Paton for their helpful attendance during the seismic interpretation at the GeoForschungsZentrum Potsdam.

I also want to thank all my colleagues for their assistance and help during the production of this thesis, e.g. Dorothee Mertmann, Martina Grundmann, Kerstin Fiedler, Kirstin Elger, Harald Ege, Andres Tassara, Jochen Babist, Mathias Konrad-Schmolke, Florian Füsseis, Sergei Medvedev, and Elodie Vernhet.

Last but not least I want to thank all my friends (Claudia, Tom, Kerstin, Jan, ...) and relatives for their moral support, especially Stefan Spille, my brother, and my parents.
