

PHYLOGENY, BIOLOGY AND CHARACTER TRANSFORMATIONS OF THE
HISTIOSTOMATIDAE (ACARI, ASTIGMATA)

	pages
ABSTRACT	3-7
INTRODUCTION	8-20
<i>Reconstruction of the phylogeny</i>	
<i>Phylogenetic position of the Histiostomatidae</i>	
<i>Plesiomorphic characters of the Astigmata</i>	
<i>Sense organs</i>	
<i>Chemotactic behavior and light receptor sense in the Histiostomatidae</i>	
<i>Phoresy</i>	
<i>Sucker plate of the deutonymph</i>	
<i>Female reproductive system of the Astigmata</i>	
<i>Polymorphisms within the Astigmata</i>	
<i>Morphology of histiostomatid structures: gnathosoma, female copulation opening and "ringorgans"</i>	
<i>Habitats of the Histiostomatidae</i>	
<i>Necromeny within the histiostomatids</i>	
MATERIAL AND METHODS	21
CLADOGRAM OF THE HISTIOSTOMATIDAE	22-27
STEM SPECIES PATTERN	28
MORPHOLOGY AND CHARACTER TRANSFORMATIONS	29-59
<i>Morphology of the gnathosoma</i>	
<i>Phylogenetic position of Bonomoia n. sp.</i>	
<i>Palpalmembrane transformations of Bonomoia opuntiae</i>	
<i>Palpalmembrane transformations within the bark inhabiting group</i>	
<i>Propodosoma shield</i>	
<i>Transformations of the propodosoma shield</i>	
<i>Pattern of dorsal setae</i>	
<i>Transformations of dorsal setae</i>	
<i>Pattern of ventral setae</i>	
<i>Copulation opening</i>	
<i>Transformations of the copulation opening</i>	
<i>Pattern of apodemes in adult mites</i>	
<i>Pattern of deutonymph apodemes</i>	
<i>Problems related to the current serial homologisation of leg articles in histiostomatid deutonymphs</i>	
<i>„Ringorgans“</i>	
<i>Sclerotisations of larva and protonymph</i>	

HABITATS 60-72

Wooden habitats
Camouflage group
Watery habitats
Histiostoma feroniarum-group
Pitcher Plant group
Histiostoma group

BIOLOGY 73-112

„Leg waving“
Waving behavior (of Bonomoia n. sp.)
Transformations of the „waving“ behavior within the Histiostomatidae
Possible reasons for this behavior
Phylogenetic conclusions
Light sensory organs of Bonomoia n. sp.
Light sensitive behavior of B. n. sp. in comparison to other histiostomatids
Conclusions
Mode of reproduction
Copulation position
Histiostoma palustre Wirth, 2003
Evolution of male polyphenisms within the Histiostomatidae

NECROMENY OF *HISTIOSTOMA POLYPORI*

The carrier species of H. polypori
Choice tests with different carrier species
Brooding biology of F. decipiens
Mite's development in the earwig nest
Development requirements of the mite
Position of the deutonymphs on earwigs collected from the field
Molting and cleaning behavior of earwigs
Earwig stages bear an invariable number of mite deutonymphs
Life cycle duration of H. polypori
Possibilities of deutonymph-transfer outside the earwig-nest
Summary of H. polypori life-strategy

HISTIOSTOMA MARITIMUM

Place of development
The biology of Heterocerus fenestratus
Relationship between season and frequency of occupation with deutobymphs
Crossing experiments
Necromeny
Phylogenetic relationship of Histiostoma maritimum and H. polypori based on morphological characters

ACKNOWLEDGEMENTS 113
