

Acknowledgements

I deeply appreciate Prof. Dr. Udo Heinemann for generous support and for kind help in presenting my Ph.D thesis to The Free University, Berlin. I also thank Prof. R. Erdmann for refereeing the thesis.

I would like to express my best thanks to Dr. Peter Westermann for accepting me as a Ph.D student in his lab and for providing me with critical guidance and constant motivation. He also gave me warm help in public affairs. Without his help this work would not have been possible to complete.

Cordial thanks to Maria Knoblich for giving me technical assistance and lots of help in laboratory and living affairs. I also thank my colleague Boris Radau for teaching me 2D electrophoresis and for other assistance in laboratory affairs.

This work also benefited from analysis of protein structures by Prof. Dr. Heinz Welfle and Dr. Rolf Misselwitz, and from peptide sequencing by Dr. Albrecht Otto and Dr. Eva-Christina Müller. Finally, the advice by Mr. Rudolf Dettmer in protein purification is gratefully acknowledged.

I am indebted to Mrs. Henriette Mödig and Mrs. Daniela Keyner for reading and correcting the manuscript.

Thanks to Dr. C. Diatloff-Zito for the generous gift of dynamin II cDNA, Dr. P.S McPherson for providing the plasmid coding for amphiphysin II SH3 domain, Dr. B. Qualmann, Dr. M. Plomann and Dr. B. Jockusch for providing the anti-syndapin, anti-PACSIN II and anti-profilin I antibodies, respectively.

Thanks to all other friends and colleagues who gave me help and advice to this work.

This work was supported by grants from Deutsche Forschungsgemeinschaft (DFG: We 1482/4 and We 1482/5)
