

## Appendix E

# Reactions with larger hydrocarbons as reactants or products

This list is the part of the ComChem reaction network, containing all reactions related to the study performed in this work. Table 14.3 in section 14.2 gives detailed information for the main reactions including the references. The rate coefficient as used in the actual modeling are calculated by  $k = A \left( \frac{T_e}{300} \right)^B \exp -\frac{C}{T_e}$  the standard Arrhenius form. For photolytic reaction the temperature dependence is negligible and therefore the A and B values are zero. For details see for example Schmidt *et al.* [1988].

The rates for the remaining reactions are a compilation of a number of sources: Huebner *et al.* [1992] (mainly for photolytic reactions), Schmidt *et al.* [1988], Boice *et al.* [1986] and the UMIST RATE99 database [Le Teuff *et al.*, 2000].

Reactants	Products	A	B	C	Reaction category
c2h6	--> c2h4 h2	3.67E-06	0.0000	0.0	Photodissoziation
c2h6	--> c2h5 h	3.28E-06	0.0000	0.0	Photodissoziation
