

## Table of Contents

Summary .....	v
Zusammenfassung.....	vi
1. Introduction.....	1
1.1. Cell adhesion: the basis of multicellular life.....	1
1.2. Cell adhesion in the immune system.....	1
1.3. The leukocyte adhesion cascade .....	2
1.3.1 Adhesion molecules involved in leukocyte extravasation .....	3
1.3.2. Function of adhesion molecules in different steps of leukocyte extravasation.....	7
1.3.3. Regulation of leukocyte trafficking by combinatorial diversity	12
1.4. Role of different domains for L-selectin function.....	13
1.5. Intracellular interactions of L-selectin .....	14
1.5.1. Receptor positioning .....	14
1.5.2. Connection of L-selectin to the cytoskeleton.....	15
1.5.3. Cellular signal signals that regulate L-selectin function (inside-out-signalling).....	16
1.5.4. Signal transduction initiated by L-selectin (outside-in-signalling).....	18
1.6. Aim of this study.....	21
2. Results.....	22
2.1. Generation and testing of polyclonal antibodies against L-selectin .....	22
2.1.1 Antibody against the L-selectin ectodomain.....	22
2.1.2. Antibody against the L-selectin cytoplasmic domain .....	24
2.2. Yeast 2-hybrid screen .....	25
2.2.1. Cloning of Yeast 2-hybrid bait vector.....	26
2.2.2. Test for expression of bait protein .....	27
2.2.3. Test for autonomous activation of reporter genes.....	27
2.2.4. Screening with pAS2-1/LSCD .....	28
2.2.5. Construction of triple bait vector .....	28
2.2.6. Screening with pAS2-1/3xLSCD.....	29
2.2.7. Analysis of positive clones .....	30
2.2.8. Direct testing for interaction with $\alpha$ -actinin .....	32
2.3. Cloning and expression of GST-Lscyto fusion constructs .....	34

---

2.3.1. Construction of GST-Lscyto .....	34
2.3.2. Construction of Lscyto mutants .....	34
2.3.3. Modification of GST as a control .....	36
2.3.4. Mutagenesis of potential phosphorylation sites in the MCS.....	36
2.3.5. Expression of recombinant fusion proteins.....	36
2.4. Affinity isolation of interacting proteins (“Pull-down”-experiments)..	38
2.4.1. Proteins isolated from the membrane fraction .....	42
2.4.2. Proteins isolated from the cytosolic fraction.....	43
2.5. Isolation of L-selectin-associated membrane complexes.....	45
2.6. <i>In-vitro</i> phosphorylation assays with GST-Lscyto .....	47
2.7. <i>In-vitro</i> kinase assays with Lscyto-associated kinases from cell lysates	49
2.8. Isolation of phosphorylation-dependent L-selectin binding partners ...	53
3. Discussion .....	57
3.1. Isolation of interaction partners for the cytoplasmic domain of L-selectin .....	57
3.1.1. Yeast 2-hybrid screen.....	58
3.1.2. Affinity-isolation of binding partners from cell lysates.....	59
3.2. L-selectin interacts with PKC in an isotype-specific manner .....	62
3.2.1. PKC phosphorylates L-selectin <i>in vitro</i> .....	63
3.2.2. The cytoplasmic tail of L-selectin precipitates a PKC-like kinase activity from cell lysates .....	63
3.2.3. Association of PKC with L-selectin is isotype-specific.....	64
3.2.4. PKC association is enhanced when L-selectin is phosphorylated on serine residues .....	65
3.2.5. L-selectin associates with PKC <i>in vivo</i> .....	66
3.3. PKC-a central mediator of L-selectin function? .....	66
3.3.1. Regulation of L-selectin function by PKC and Calmodulin.....	66
3.3.2. L-selectin-a PKC anchoring protein?.....	69
3.3.3. Cytoskeleton-association and inside-out activation .....	70
3.3.4. Influence of PKC on intracellular signalling pathways .....	71
3.3.5. Crosstalk with other transmembrane receptors .....	72
3.3.6. L-selectin-mediated integrin activation.....	73
3.3.7. Intersection with TCR signal transduction.....	74
3.4. Conclusion and further prospects.....	74

---

4. Material and methods.....	76
4.1. General materials .....	76
4.1.1 Chemicals.....	76
4.1.2. Labware.....	76
4.1.3. Devices.....	76
4.2. Molecular biology methods .....	76
4.2.1. Special materials.....	76
4.2.2. Strain maintenance and glycerol stocks.....	79
4.2.3. Polymerase chain reaction (PCR).....	80
4.2.4. Restriction.....	81
4.2.5. Agarose gel electrophoresis.....	81
4.2.6. Generation of oligonucleotide inserts for cloning .....	82
4.2.7. Purification of nucleic acid fragments.....	82
4.2.8. Ligation.....	82
4.2.9. TA cloning.....	82
4.2.10. DNA transformation in <i>E. coli</i> .....	83
4.2.11. Isolation of plasmid DNA.....	85
4.2.12. DNA sequencing.....	85
4.2.13. Mutagenesis of plasmids .....	85
4.2.14. Expression of recombinant GST-fusion protein.....	86
4.2.15. Purification of GST-fusion protein.....	86
4.3. Yeast methods .....	87
4.3.1. Special materials.....	87
4.3.2. Yeast culture and glycerol stocks .....	88
4.3.3. Transformation of yeast.....	89
4.3.4. $\beta$ -galactosidas assay.....	90
4.3.5. Whole cell lysates of yeast cells .....	90
4.3.6. Isolation of plasmid DNA from yeast.....	90
4.4. Biochemical and immunological methods.....	91
4.4.1. Special materials.....	91
4.4.2. Culture of eukaryotic cells.....	94
4.4.3. Metabolic labelling of eukaryotic cells.....	94
4.4.4. Whole cell lysate.....	94
4.4.5. Immunoprecipitation.....	95
4.4.6. Isolation of L-selectin complexes.....	95
4.4.7. Preparation of subcellular fractions .....	96
4.4.8. Pull down experiments .....	96
4.4.9. SDS polyacrylamide electrophoresis (SDS-Page).....	97
4.4.10. Coomassie staining.....	97

---

4.4.11. Silver staining .....	98
4.4.12. Western blot.....	98
4.4.13. Generation of polyclonal antibodies.....	99
4.4.14. Determination of protein concentrations .....	100
4.4.15. Mass-spectrometric analysis of proteins.....	100
4.4.16. <i>In vitro</i> kinase assays .....	100
5. References .....	102
Abbreviations .....	121
Lebenslauf .....	123
Danksagung.....	124
