Gutachter:

Prof. Dr. Dr. h. c. Peter Deuffhard
Prof. Dr. Ross T. Whitaker (University of Utah)

Datum der Disputation:

28. Januar 2004

Acknowledgements

The work described in this thesis has been carried out from 1997 to 2002 at the department of Scientific Visualization of the Zuse Institute Berlin (ZIB).

First of all, I would like to thank my tutors Prof. Dr. Peter Deuffhard and Hans-Christian Hege for the opportunity to work in this exciting interdisciplinary field. Without their constant support this work would not have been possible. The creative and collaborative atmosphere at ZIB has been key for me to ongoing motivation and scientific as well as personal inspiration.

I would like to thank all ZIB members and ex-members for numerous fruitful discussions, suggestions, and practical help offered every day. Special thanks deserves Detlev Stalling for helping me to develop and implement many ideas presented in this work and Steffen Prohaska who implemented most of the skeletonization algorithms.

Finally, I thank Prof. Dr. Martin Heisenberg and Prof. Dr. Randolph Menzel and all members of their groups for the inspiring cooperation, in particular Karlheinz Rein and Robert Brandt.

Contents

1	Introduction	1
1.1	Problem Formulation	1
1.2	Motivation	2
1.3	Overview	3
1.4	Outline of the Thesis	3
1.5	Specific Contributions	4
2	Concepts and Techniques	5
2.1	Digital Images	5
