

## **Acknowledgements**

First of all, I would like to give my deepest respect and hearty gratitude to my promotor Prof. Dr. W. Saenger for kindly giving me the opportunity to accomplish my doctoral degree in his laboratory and also for his academic advice, constant encouragement and financial support during my work and studies. I was always moved by his addict and critical attitude towards science. I will never forget his German humour which made my work become an enjoying event.

I am especially indebted to Dr. Joachim Frank and Dr. Werner Schröder without whose contributions this Ph.D thesis couldn't have been accomplished.

I would like to express my thanks to many colleagues in other research groups for the collaborations of this project: Prof. Erich Lanka and Dr. Günter Ziegelin from Max-Planck-Institut für Molekulare Genetik, Berlin; Prof. Josef F. Holzwarth from Fritz-Haber-Institut der Max-Planck-Gesellschaft, Berlin; Prof. Joachim Behlke from Max-Delbrück-Centrum für Molekulare Medizin (MDC), Berlin; Dr. Ulrike Alexiev from Physics Department of FU Berlin; Stefanie Hammer from Institut für Pharmazie of FU Berlin; Dr. Cristoph Böttcher from Forschungszentrum für Elektronenmikroskopie of FU Berlin; Dr. Oliver Pänke from FB Biologie/Chemie of Universität Osnab

I wish to acknowledge my debts to many people who considerably assisted me in this laboratory: Norbert Sträter, Claudia Alings, Clemens Langner, Rita Diehl, Carsten Jacob, Monika Krems, Timm Maier, etc.

Many people and friends have made my life at Berlin full of joys. Without them, my life would have been just lonely nights and mere academic work. They have also given me tremendous help during the past three years, and I would like to share my pride with all of them.

At last but not least, my acknowledgements would never be complete no matter how brief, without mentioning the wonderful support and love I got from my distant family! I owe you all my success.
