

Acknowledgements

This research and dissertation would not have been possible without the help and support of the people to whom I would like to express my gratitude:

First and foremost I wish to thank Prof. Dr. Martin Wolf for giving me the opportunity to work on this exciting project in his research group. Since I joined his group as an exchange student, I have achieved a high degree of scientific and personal development owing to his guidance and support. He set an example for a creative, thorough and in the same time fascinating approach to physics that always motivate me.

To Prof. Dr. Paul Fumagalli for his willingness to co-assess my Ph.D. work.

To Dr. Uwe Bovensiepen for his continuous support, excellent guidance and motivating discussions during this work as well as for reviewing my work.

To Dr. Alexey Melnikov for sharing with me his knowledge in the nonlinear optics and ultrafast lasers, for the uncountable hours spend it the "dark tent" during the day-and-night SHG measurements and for critical reading of some "hot" parts of the manuscript.

To Prof. Dr. Dr. h.c. Eckart Matthias for his enthusiastic way of motivating people and for the enlightening discussions.

The fruitful collaboration and useful discussions with Dr. Kai Starke are gratefully acknowledged.

The discussions with Dr. Panos Loukakos, Dr. Tobias Kampfrath and Dr. Martin Lisowski about physics and not only, are highly appreciated.

To Dr. Peter West for his help in the many encountered "soft" and "hard" computer problems.

To Dietgard Mallwitz for her invaluable help in the fight against the bureaucracy jungle.

Last but not least, my deepest gratitude goes to Raluca for her love, care and support over the past years. You and Cristian are the most fortunate things that happened to me.
