Figure 10-1: Phylogram of Boraginales (major clades are indicated, symbols see legend). Heliotropiaceae, Cordiaceae, and Ehretiaceae constitute the Primarily Woody Boraginales. *Acmella*, *Patagonula*, and *Succelium* are included in Cordia (Sebestena subclade). *Carmen*, *Kotula*, and possibly also *Cortesia* are included in Ehretia. The systematic position of *Codon* and *Wellstudia* remains uncertain. *Hydroles* and *Pteleocarpa* do not belong to Boraginales. Ma: Million years; NW: New World; OW: Old World.
