

Regulatory Networks of Gene Expression in Heart and Skeletal Muscle Cells on the Level of Histone Modifications and Transcription Factors

Regulatorische Netzwerke der Genexpression in Herz- und Skelettmuskelzellen auf der Ebene von Histonmodifikationen und Transkriptionsfaktoren

Dissertation zur Erlangung des akademischen Grades des
Doktors der Naturwissenschaften (Dr. rer. nat.)

eingereicht im Fachbereich Biologie, Chemie, Pharmazie
der Freien Universität Berlin

vorgelegt von

Dipl. Chem. Jenny J. Fischer

Oktober 2007

1. Gutachter: Prof. Dr. H. Lehrach, Max-Planck-Institut für molekulare Genetik, Berlin
 2. Gutachter: Prof. Dr. G. Multhaup, Freie Universität Berlin
- Disputation am 10.12.2007

For my parents and SK

Acknowledgements

First and foremost I wish to thank Dr. Silke Sperling and Prof. Dr. Hans Lehrach for supporting and supervising my PhD thesis. I also would like to give my thanks to Prof. Dr. Gerd Multhaup for being the referee for this thesis on behalf of the Biochemistry department of the Freie Universität Berlin.

I am grateful to the computer scientists Tammo Krüger and Markus Schüler (Sperling group) as well as Jörn Tödling and Dr. Wolfgang Huber from the EMBL-EBI (Cambridge, UK), for their brilliant data analysis. I am indebted to Jenny Schlesinger for being an excellent isolator of RNA and for patiently growing and passaging the cells. My warm thanks to Dr. Christina Grimm for establishing the perfect siRNA transfection protocols and passing the secrets on to me. Martje Tönjes I thank for introducing me to the mysteries of immunofluorescence. I am grateful to Dr. Stefanie Hammer for help with the amplification of ChIP samples. To all members of the group my thanks for a great time, support and an intellectually stimulating environment.

Last but not least I am very thankful to Dr. Sven Klussmann for his critical review of this manuscript and Dr. Alan Punnoose for correcting this text.

For supplying me with the cell lines HL-1 and C2C12 I thank Prof. Dr. William C. Claycomb (Departments of Biochemistry and Molecular Biology and Cell Biology and Anatomy, Louisiana State University Medical Center, New Orleans, LA 70112) and Prof. Dr. Jakob Schmidt (Department of Biochemistry and Cell Biology, State University of New York, Stony Brook, New York), respectively.

1	Introduction	1
1.1	Transcription	1
1.1.1	Chromatin Structure and Transcriptional Regulation	2
1.1.1.1	Chromatin and Histones	2
1.1.1.2	Characteristics of Investigated Histone Modifications	5
1.1.1.3	The Histone Code Hypothesis vs. Transcriptional Memory	7
1.1.1.4	Histone-Modifying Enzymes & Disease	8
1.1.1.5	Histone Modifications and Cardiovascular Disease	9
1.1.2	Transcription Factors in Congenital Heart Diseases	10
1.1.2.1	GATA Binding Protein 4 (Gata4)	11
1.1.2.2	The Transcription Factor Nkx2.5	13
1.1.2.3	Myocyte Enhancer Factor 2a (Mef2a)	14
1.1.2.4	Serum Response Factor (Srf)	15
1.2	Experimental Methods	17
1.2.1.1	Chromatin Immunoprecipitation	17
1.2.1.2	RNA interference	19
2	Purpose & Aims	23
3	Materials and Methods	25
3.1	Experimental Procedures	25
3.1.1	Cell Culture	25
3.1.2	Protein Analysis	26
3.1.2.1	Western Blot	26
3.1.2.2	Indirect Immunofluorescence	27
3.1.3	Nucleic Acid Analysis	27
3.1.3.1	Quantitative Real-Time PCR	27
3.1.3.2	Bioanalyzer Analysis	28
3.1.3.3	Transfections	29
3.1.4	Expression Array Hybridizations	30
3.1.4.1	Expression Analysis on NimbleGen Arrays	30
3.1.4.2	Expression Analysis on Illumina Arrays	30
3.1.5	Chromatin Immunoprecipitation (ChIP)	30
3.1.5.1	ChIP Histone Modifications	30
3.1.5.2	ChIP-chip against Gata4, Mef2a, Nkx2.5, and Srf	32
3.2	Design of Arrays	32
3.3	Data Analysis	34
3.3.1	Histone Modification Array Analysis	34
3.3.2	TF-ChIP-Array Analysis	38
3.4	Figures and Graphs	40
4	Results	41
4.1	Development of ChIP Arrays and Analysis Algorithms	41
4.1.1	The Design of Heart and Skeletal Muscle ChIP Arrays	41
4.1.2	<i>Ringo</i> – an R/Bioconductor Package for Analyzing ChIP-chip Readouts	42
4.2	Combinatorial Properties of Histone Modifications	44
4.2.1	Gene Expression Patterns of Heart and Skeletal Muscle Cells	44
4.2.2	Histone Modification Patterns of Heart and Skeletal Muscle Cells	46
4.2.2.1	Specificity of Antibodies used in ChIP Experiments	46
4.2.2.2	The Median Modified Site Contains Four Nucleosomes	46
4.2.2.3	Co-occurrence of Histone Modifications	47
4.2.2.4	Cell Type-Specific Domains	49

4.2.2.5 Association of TSSs and Modified Domains.....	50
4.2.2.6 Localization of Modifications Relative to TSSs.....	52
4.2.3 Transcript Levels and Histone Modifications Demonstrate Histone Code.....	53
4.2.3.1 Analysis Based on Expression Categories.....	53
4.2.3.2 Analysis Based on Modification Categories.....	55
4.2.4 Investigation of Skeletal Muscle Differentiation.....	58
4.2.4.1 Modification Changes during Differentiation.....	58
4.2.4.2 Expression Levels and Modification Changes.....	59
4.2.4.3 Modification Changes of Differentially Expressed Genes.....	60
4.2.5 Interim Summary: Combinatorics of Histone Modifications.....	61
4.3 A Transcriptional Regulatory Network of Gata4, Mef2a, Nkx2.5, and Srf.....	62
4.3.1 Detection of Transcription Factors in HL-1 Cells.....	62
4.3.1.1 Specificity of Antibodies Directed against Transcription Factors.....	62
4.3.1.2 Cellular Localization of Transcription Factors.....	63
4.3.2 Characterization of Transcription Factor Binding.....	64
4.3.2.1 Identification of Transcription Factor Binding Sites (TFBSs).....	64
4.3.2.2 Defining the <i>cis</i> Elements Mediating Transcription Factor Binding.....	67
4.3.2.3 Conservation of TFBSs is Low.....	68
4.3.2.4 Co-binding and Co-occurrence of TFs.....	69
4.3.2.5 Functional Annotation of Direct Targets.....	72
4.3.3 Transcription Factors and Transcriptional Regulation.....	73
4.3.3.1 TF Binding is Associated with Higher Expression Levels.....	73
4.3.3.2 TFBSs and Histone Modifications Frequently Occur Together.....	74
4.3.3.3 Influence of Histone Modifications on Expression of TF Targets.....	75
4.3.4 A Cardiac Regulatory Network.....	77
4.3.4.1 Individual Targets can be Activated or Repressed.....	77
4.3.5 Essential Genes are Redundantly Regulated.....	78
4.3.6 Expression of <i>Tbx20</i> is Regulated by Gata4, Mef2a, Nkx2.5, and Srf.....	81
4.3.7 Interim Summary: Regulatory Network of Gata4, Mef2a, Nkx2.5, and Srf.....	83
5 Discussion	85
5.1 Development of Open Source Tools for ChIP-chip.....	85
5.1.1 The Design of the Muscle Regulatory chips for ChIP.....	85
5.1.2 Data Analysis – <i>Ringo</i>	86
5.1.3 Integrated Database of Results.....	86
5.2 Regulation of Transcription in Heart & Skeletal Muscle Cells by Histone Modifications.....	88
5.2.1 Modified Sites and Literature Comparison.....	89
5.2.2 Domains and TSSs.....	90
5.2.3 Domains & Expression.....	90
5.2.4 Differentiation.....	91
5.3 Transcriptional Regulation in the Heart by Transcription Factors.....	93
5.3.1 The Majority of TFBSs is Located Outside the Core Promoter.....	93
5.3.2 Gene Ontologies of Direct TF Targets Match Mouse Model Phenotypes.....	93
5.3.3 Gata4, Mef2a, Nkx2.5, and Srf Frequently Bind Together.....	95
5.3.4 Few TFBSs Show Evolutionary Conservation.....	96
5.3.5 Refinement of TF Binding Motifs.....	97
5.3.6 TFBSs are Marked by Histone Modifications.....	97
5.3.7 The TFs Function Mainly as Activators.....	99
5.3.8 Direct Targets and Differential Expression.....	99
5.3.9 A Gene Regulatory Network.....	101
5.3.10 Expression of <i>Tbx20</i> is Activated by Gata4, Mef2a, Nkx2.5, and Srf.....	102
