Acknowledgements

The work presented in this thesis was carried out at the Institut für Molekularbiologie und Biochemie, Freie Universität Berlin. I am indebted to a great number of people for their help and advice throughout this project.

First and foremost, I would like to express my deep gratitude to my supervisor, Prof. Dr. Werner Reutter, who provided excellent opportunities for me to conduct my Ph.D. studies in his laboratory, and also provided me with his supervision, support and encouragement during this phase of my dissertation.

I also wish to express my sincere gratitude to Dr. Fan Hua for her continuing scientific interest in this work, and her patience and attention to detail in reviewing the draft thesis.

I would like to express my appreciation and gratitude to all of my colleagues. In particular to Dr. Martin Zimmermann-Kordmann, Dr. Jingsong Zhang, and Detlef Grunow for their invaluable help and experience.

Finally, my thanks also to my husband and my family for all they have given me during the long time my dissertation kept me away from them.
