# **Quality-Driven Information Filtering in the Context of Web-Based Information Systems**

INAUGURAL-DISSERTATION

zur Erlangung des akademischen Grades eines  
Doktors der Wirtschaftswissenschaft des Fachbereichs  
Wirtschaftswissenschaft der Freien Universität Berlin

vorgelegt von  
**Diplom Kaufmann Christian Bizer**  
geboren in Konstanz  
wohnhaft in Berlin

März 2007

**Dekan**

**Univ.-Prof. Dr. Michael Kleinaltenkamp**  
Freie Universität Berlin  
Fachbereich Wirtschaftswissenschaft

**Erstgutachter**

**Univ.-Prof. Dr. Uwe H. Suhl**  
Freie Universität Berlin  
Fachbereich Wirtschaftswissenschaft  
Institut für Produktion, Wirtschaftsinformatik und Operations Research

**Zweitgutachter**

**Univ.-Prof. Dr.-Ing. Robert Tolksdorf**  
Freie Universität Berlin  
Fachbereich Mathematik und Informatik  
Arbeitsgruppe Netzbasierte Informationssysteme

Tag der Disputation: 14. Februar 2007

# Abstract

Web-based information systems provide access to information originating from multiple information providers inside the company, from partner organizations, and from the public Web. The quality of provided information may vary as information providers have different levels of knowledge, different views of the world, and different intentions. Thus before information is used to accomplish a specific task, its quality should be assessed according to task-specific criteria. The goal of the thesis is to develop and evaluate a quality-driven information filtering framework which supports information consumers in their decision whether to accept or reject information. The main objective of the framework is to allow information consumers to apply a wide range of different subjective filtering policies. In order to facilitate the information consumers' understanding of filtering decisions, the framework can generate explanations why information satisfies a specific policy. The framework is integrated into a web browser and is applied within a financial information integration scenario.
