
Table of contents

Abbreviations	vii
1. Introduction	1
2. Objectives.....	4
3. Literature review	5
3.1 Significance of trypanosomosis	5
3.2 Epidemiology of trypanosomosis	6
3.2.1 Pathogen.....	7
3.2.2 Vector.....	8
3.2.3 Host.....	9
3.2.4 Environment.....	10
3.3 Management of trypanosomosis.....	11
3.3.1 Control of the pathogen	11
3.3.2 Control of the vector.....	14
3.3.3 Control through host resistance	16
3.3.4 Practical aspects of control	18
3.4 Trypanocidal drug resistance.....	21
3.4.1 Definition and aetiology.....	21
3.4.2 Extent and impact of resistance	21
3.4.3 Management of resistance.....	22
3.5 Modelling trypanosomosis control and drug resistance	28
3.5.1 SEIR models	28
4. Materials and methods	30
4.1 Study setting	30
4.2 Study design	32
4.2.1 Situational analysis	32
4.2.2 Evaluation of AAT control strategies.....	32
4.3 Participant selection.....	34
4.4 Data collection tools.....	36
4.4.1 Situational analysis	36
4.4.2 Evaluation of AAT control strategies.....	38
4.5 Data analysis	43
4.5.1 Situational analysis	45
4.5.2 Evaluation of AAT control strategies.....	46
4.6 Mathematical model.....	49

5. Results	50
5.1 Situational analysis	50
5.1.1 Demography	50
5.1.2 Farming system	51
5.1.3 Knowledge, attitude and practice of trypanosomosis management.....	57
5.1.4 Animal health services for trypanosomosis control.....	66
5.1.5 Understanding and management of trypanocide resistance.....	73
5.1.6 Epidemiological surveys	76
5.2 Evaluation of AAT control strategies	81
5.2.1 Evaluation of participatory vector control	82
5.2.2 Evaluation of trypanotolerant cattle.....	94
5.2.3 Evaluation of rational drug use initiatives.....	101
5.2.5 Benefit-cost analysis of strategies for AAT control.....	119
5.3 Mathematical model.....	119
6. Discussion.....	124
6.1 Situational analysis of epidemiology and management of AAT	124
6.1.1 Knowledge, attitude and practice of trypanosomosis management.....	125
6.1.2 Animal health services for trypanosomosis control.....	126
6.1.3 Epidemiology of trypanosomosis and related diseases	129
6.2 Evaluating strategies for trypanosomosis control under risk of resistance	132
6.2.1 Participatory vector control	132
6.2.2 Control with trypanotolerant cattle	135
6.2.3 Provision of rational drug use information.....	137
6.2.4 Benefit-cost ratios for the different interventions	142
6.3 Modelling trypanosomosis and trypanocide resistance	144
7. Recommendations and conclusions	145
8. Summary.....	148
9. Zusammenfassung	149
10. References.....	151
Annex 1: Differential equations for mathematical model.....	174
Annex 2: Benefit-cost analyses.....	176
Annex 3: Data collection forms	182
Acknowledgements	193
Curriculum vitae.....	194
SELBSTÄNDIGKEITSERKLÄRUNG.....	195
