1	Introduction	5
1.1	Computational modelling in neurobiological research	5
1.2	Features of existing simulation packages	6
1.3	Contributions of this thesis	6
2	Basic approaches in computational neuroscience	9
2.1	Computer simulations	9
2.2	Directions of development of computational neuroscience	10
2.2.1	Artificial neural networks	11
2.2.2	Modelling of real neurobiological systems	12
2.2.3	Pulsed neural models	13
2.2.4	Compartmental modelling	18
2.3	Summary	19
3	Detailed neural models	21
3.1	Neuron physiology	21
3.1.1	Neural components and signals	21
3.1.2	Synaptic connections	22
3.1.3	Cell membrane	24
3.1.4	Ionic channels	25
3.2	Computational aspects	27
3.2.1	The Hodgkin-Huxley model	27
3.2.2	Cable theory	30
3.2.3	The compartmental approach	32
3.3	Summary	34
4	Computational neuroscience software	35
4.1	General versus special-purpose simulators	36
4.2	Important aspects of the program choice	37
4.3	Compartmental modelling packages	39
4.3.1	Neuron	39
4.3.2	Genesis	43
4.3.3	SNNAP	48
4.3.4	Nodus	52

4.3.5	Surf-Hippo	54
4.3.6	NeuronC	56
4.3.7	HHSim	57
4.4	Summary	59
5	Client-server architecture	61
5.1	Roles of client and server	61
5.2	Genesis simulator as a server	63
5.2.1	Client-server connection	63
5.2.2	XSL transformation rules	65
5.2.3	Elements of neural models	67
5.3	Summary	68
6	Working with NeuroSim	71
6.1	Getting started	71
6.2	Model definition	72
6.2.1	Example: network of neurons with Hodgkin-Huxley channels	75
6.2.2	Example: passive dendritic cable	77
6.3	Model description files	80
6.4	Connection to the server	82
6.5	Simulation results	83
6.5.1	Animation of the resulting data	83
6.5.2	Graphical windows	85
6.6	Applet and application versions of NeuroSim	87
6.7	Summary	87
7	C++ server	89
7.1	Classes hierarchy	89
7.1.1	Basic classes	89
7.1.2	Implementation of standard neural elements	91
7.2	Numerical integration	95
7.3	Application of neural element classes	96
7.4	Connection to the C++ server	97
7.4.1	Input files and simulation results	97
7.5	Conclusions	98
8	Example: a sensory neuron of <i>Aplysia</i>	99
8.1	Biological results and problem definition	99
8.1.1	Neuron functions and structure	99
8.1.2	Results of biological experiments	100
8.2	Model definition	102
8.3	Simulation of regulated transmission	103
8.3.1	Parameters of channel dynamics	104
8.3.2	Simulation results	105
8.4	Conclusions and outlook	107

9 NeuroSim as an intelligent E-Chalk assistant	111
9.1 The E-Chalk System	112
9.1.1 Features of E-Chalk	112
9.1.2 Software architecture	113
9.1.3 Interface of the E-Chalk system	114
9.1.4 Intelligent assistants in E-Chalk	115
9.2 API of the intelligent assistants	116
9.3 Handwriting recognition in NeuroSim	118
9.4 Integration of NeuroSim into E-Chalk	120
9.4.1 Different neural model types	121
9.4.2 Simulation of pulsed neurons	123
9.4.3 Simulation of real neurons with Hodgkin-Huxley dynamics	124
9.5 Summary	125
10 Summary	127
