

Commitment to splicing  
and pre-mRNA retention:  
early steps of yeast spliceosome assembly

Dissertation zur Erlangung des Grades  
eines Doktors der Naturwissenschaften (Dr. rer. nat.)

eingereicht im Jahr 2000

von

Diplom-Biochemiker Berthold Rutz  
aus Brandenburg/Havel

am Fachbereich Biologie, Chemie und Pharmazie  
der Freien Universität Berlin

Gutachter: Prof. Dr. Albrecht Bindereif  
Prof. Dr. Volker Erdmann

Disputationstermin: 23. Juni 2000

This work has been carried out from October 1996-March 2000 in the group of Dr. Bertrand Séraphin at EMBL Heidelberg. It was supported by a predoctoral EMBL-fellowship. The major part of the work presented here has been published or accepted for publication:

- Puig, O., Rutz, B., Luukkonen, B.G., Kandels-Lewis, S., Bragado-Nilsson, E. and Séraphin, B. (1998) New constructs and strategies for efficient PCR-based gene manipulations in yeast. *Yeast*, **14**, 1139-1146.
- Rutz, B. and Séraphin, B. (1999) Transient interaction of BBP/ScSF1 and Mud2 with the splicing machinery affects the kinetics of spliceosome assembly. *RNA*, **5**, 819-831.
- Rigaut, G., Shevchenko, A., Rutz, B., Wilm, M., Mann, M. and Séraphin, B. (1999) A generic protein purification method for protein complex characterization and proteome exploration. *Nat Biotechnol*, **17**, 1030-1032.
- Rutz, B. and Séraphin, B. (2000) A dual role for BBP/ScSF1 in nuclear pre-mRNA retention and splicing. *EMBO J*, **19**, 1873-1886.

## **ACKNOWLEDGMENTS**

A number of people have accompanied me through these last three and a half years. They made my time at EMBL enjoyable and helped me to finish this work successfully.

In particular I would like to thank:

Bertrand Séraphin, my supervisor, for invaluable support and advice and for always reminding me of the preliminary nature of scientific findings (“Do you really believe in your model?”).

Juan Valcárcel, Michael Sattler, Matthias Mann and Albrecht Bindereif, the members of my thesis committee, for lively participating in my Annual Reports, for comments on my manuscripts and for always being open for questions.

Anna Shevchenko and Matthias Wilm for analysis of tiny amounts of proteins by mass spectrometry.

The EMBL-Oligoservice for in-time production of excellent quality oligonucleotides.

The EMBL-Photolab for sharp slides, fancy print-outs and help with computer problems.

Christina Kjaer for secretarial help and her neverending motherly care.

Present and past members of the Séraphin Lab (in order of appearance):

Mattias Luukkonen<sup>^</sup>, Josefa Salgado-Garrido, Lissy Bragado-Nilsson<sup>^</sup>, Guillaume Rigaut<sup>^</sup>, Oscar Puig<sup>^\*</sup>, Friederike Caspary<sup>^\*</sup>, Rafael Ramirez-Morales<sup>\*</sup>, Pascal Lopez, Emma Bouveret, and Stephane Thore for many discussions, coffee and lunch breaks, gift of plasmids and yeast strains (<sup>^</sup>), sharing protocols, correcting manuscripts and looking through this thesis (<sup>\*</sup>). They created a great environment to work in.

My fellow predocs of the year 1996 for a great time during the course and for many get-togethers afterwards.

Michael Boutros, Freddy Frischknecht, Christine Gemünd, Hélène Gournier, Marina Mapelli, Sabine Röttger, Peter Scheiffele and Maura Strigini for their friendship.

My string quartet: Ursl (c), Michael (v), Anna (va), Andreas (va), Doro (v), Anne (c) (in order of appearance) for moments of happiness and unforgettable concert-parties.

Stefania Castagnetti, Valentina Greco, Michael Hannus, Thor-Erik Rusten, Thomas Schell, Olaf Selchow, Giuseppe Testa and Katia Zanier for sharing the fun and work of organizing the “EMBL Ph.D. student symposium”.

Last but not least: my parents and my brother who were always supporting me and gave me the opportunity to forget about science and EMBL when necessary.

Claudie pour son amour et pour être toujours là.

*pour Claudie*
