

Studies on the role of transcription factor Dpf3 in epigenetic control of heart and skeletal muscle development

Untersuchung des Einflusses des Transkriptionsfaktors Dpf3 auf die
epigenetische Regulation der Herz- und Skelettmuskelentwicklung

DISSERTATION

zur Erlangung des akademischen Grades des
Doktors der Naturwissenschaften
(Dr. rer. nat.)

vorgelegt von
Diplom-Biologe Martin Lange
aus Brilon

durchgeführt am Max-Planck-Institut für Molekulare Genetik

eingereicht im Fachbereich Biologie, Chemie, Pharmazie
der Freien Universität Berlin

Juni 2008

1. Gutachter: Prof. Dr. T. Schmülling,
Institut für Angewandte Genetik, Freie Universität Berlin
Albrecht-Thaer-Weg 6, D-14195 Berlin

2. Gutachter: Prof. Dr. H. Lehrach,
Max-Planck-Institut für molekulare Genetik,
Innestr.73, D-14195 Berlin

Disputation am 08.07.2008

1	Introduction	3
1.1	Dpf3, the third member of the d4 protein family	3
1.2	Heart development.....	6
1.3	Human congenital heart disease.....	10
1.4	Skeletal muscle development.....	13
1.4.1	The sarcomere	14
1.4.2	Muscle disease in humans.....	16
1.5	Epigenetic regulation of gene expression	17
1.5.1	Chromatin remodeling	18
1.5.2	Histone shuffling	20
1.5.3	Histone modifications	20
1.5.4	Epigenetic regulation of heart and skeletal muscle development.....	26
1.6	Purpose & Aims	29
2	Materials and Methods	- 29 -
2.1	Chemicals, reagents and equipment.....	- 29 -
2.2	Consumables and Machines.....	- 30 -
2.3	Software	- 30 -
2.4	Kits	- 31 -
2.5	Bioinformatic analyses	- 31 -
2.6	Cell lines.....	- 31 -
2.6.1	C2C12 Cells	- 31 -
2.6.2	HL-1 Cells.....	- 31 -
2.6.3	HEK293T cells.....	- 32 -
2.6.4	H9c2 cells.....	- 32 -
2.7	Molecular Biology techniques.....	- 32 -
2.7.1	DNA gel electrophoresis	- 32 -
2.7.2	Enzymatic DNA digestion	- 32 -
2.7.3	Ethanol precipitation of DNA.....	- 33 -
2.7.4	DNA ligation.....	- 33 -
2.7.5	Genomic DNA isolation	- 33 -
2.7.6	Isolation of RNA	- 33 -
2.7.7	Reverse transcription of RNA – cDNA synthesis.....	- 34 -
2.7.8	Polymerase chain reaction (PCR)	- 34 -
2.7.9	Site-directed mutagenesis.....	- 34 -
2.7.10	Inverse PCR.....	- 34 -
2.7.11	TOPO cloning	- 35 -
2.7.12	Plasmid transformation into bacteria	- 35 -
2.7.13	Reportergene assays	- 35 -
2.7.14	Electromobility shift assays.....	- 35 -
2.7.15	Quantitative real-time PCR.....	- 36 -
2.7.16	Microarray analysis of <i>dpf3</i> morphant zebrafish embryos	- 36 -
2.8	Animal studies.....	- 37 -
2.8.1	Generation of transgenic mice.....	- 37 -
2.8.2	X-gal staining of mouse embryos	- 37 -
2.8.3	Embedding and sectioning of mouse embryos	- 38 -
2.8.4	Counter-staining of histological sections after X-gal staining.....	- 38 -
2.8.5	Morpholino antisense-oligonucleotide knockdown in zebrafish embryos.....	- 38 -
2.8.6	mRNA rescue of zebrafish embryos.....	- 38 -
2.8.7	<i>in situ</i> hybridization	- 38 -
2.9	Protein biochemistry	- 39 -
2.9.1	Recombinant protein expression and purification.....	- 39 -

2.9.2	GST pulldown assays	39 -
2.9.3	Histone Peptide Binding Assays	39 -
3	Results.....	41 -
3.1	Embryonic expression profiles of <i>Dpf3</i> splice variants.....	41 -
3.2	The role of <i>dpf3</i> in zebrafish embryonic development.....	42 -
3.2.1	Cloning of full-length zebrafish <i>dpf3</i>	42 -
3.2.2	<i>In situ</i> hybridization of <i>dpf3</i> in zebrafish embryos	43 -
3.2.3	Knockdown of <i>dpf3</i> by morpholino antisense-oligonucleotide injection of zebrafish embryos.....	44 -
3.2.4	Microarray gene expression analysis of <i>dpf3</i> morphant embryos.....	47 -
3.2.5	Gene ontology analysis of differentially expressed genes from zebrafish genome-wide expression arrays	48 -
3.3	DPF3 is a novel component of the BAF chromatin remodeling complex.....	50 -
3.3.1	Interaction of DPF3 proteins with components of the BAF complex	51 -
3.4	The PHD fingers of DPF3b interact with modified histone tails.....	52 -
3.5	The role of DPF3 in developmental signaling pathways.....	55 -
3.5.1	<i>DPF3</i> promoter analysis	55 -
3.5.2	<i>DPF3</i> minimal promoter analysis in transgenic mice	63 -
3.5.3	<i>DPF3</i> minimal promoter: COUP-TF binding site deletion.....	67 -
3.5.4	<i>DPF3</i> minimal promoter: Nkx2.5 binding element (NKE) deletion	70 -
3.5.5	A fate-map of <i>DPF3</i> minimal promoter activity: Cre transgenics.....	71 -
3.5.6	<i>DPF3</i> enhancer.....	73 -
3.5.7	DPF3 downstream targets: Analysis of signaling pathways.....	74 -
3.6	The evolution of the d4 protein family	76 -
4	Discussion.....	79 -
4.1	Expression profiles of <i>Dpf3</i> splice variants.....	79 -
4.2	The role of <i>dpf3</i> in zebrafish embryonic development	80 -
4.3	DPF3 is a novel subunit of the BAF chromatin remodeling complex.....	84 -
4.4	The Plant-Homeodomains of DPF3b recognize modified histone lysine residues	86 -
4.5	ChIP-chip analysis of <i>Dpf3</i> downstream targets	89 -
4.6	<i>Dpf3</i> binding sites co-localize with acetylated and methylated histone tails	90 -
4.7	The role of DPF3 in developmental signaling pathways.....	92 -
4.8	Evolution of the d4 protein family	100 -
5	Summary	103 -
6	Zusammenfassung.....	105 -
7	References.....	107 -
8	Appendix.....	121 -
8.1	Appendix B: Abbreviations.....	121 -
8.2	Appendix C: siRNAs.....	122 -
8.3	Appendix D: Lists of Primers.....	122 -
8.3.1	Human primers	122 -
8.3.2	Mouse primers.....	122 -
8.3.3	Zebrafish primers.....	122 -
8.4	Appendix E: Zebrafish Expression arrays.....	124 -
8.4.1	Array quality control.....	124 -
8.4.2	Data analysis	125 -
