0	Introduction	5
0.1	Overview	8
0.2	Sources	9
0.3	Acknowledgements	10
1	Preparation	11
1.1	κ -embeddings	11
1.2	κ -filtrations	13
1.3	Universal properties	15
1.4	The κ -Freese-Nation property	18
2	On Tightly κ-Filtered Boolean Algebras	25
2.1	The number of tightly σ -filtered Boolean algebras	25
2.2	Characterizations of tight κ -filteredness	30
2.3	Stone spaces of tightly κ -filtered Boolean algebras	35
2.4	rc-filtered, but not tightly κ -filtered	37
2.5	Complete Boolean algebras and tight σ -filtrations	42
	A technical lemma 43 Complete Boolean algebras of size	
	$\geq (2^{\aleph_0})^{++}$ have no tight σ -filtration 45 After adding many	
	Cohen reals, $\mathfrak{B}(\omega)$ is not tightly σ -filtered 47 The pseudo	
	product of Cohen forcings 50	

3	The Weak Freese-Nation Property	53
3.1	WFN($\mathfrak{P}(\omega)$) in forcing extensions	53
	A characterization of the forcings that yield σ -extensions of $\mathfrak{P}(\omega)$ 54 Many examples 58 Adding a Hechler real over ω_2 Cohen reals 67 A characterization of Cohen forcing 76	
3.2	WFN($\mathfrak{P}(\omega)$) and cardinal invariants	80
	Cichoń's diagram: The small cardinals 80 Cichoń's dia- gram: The big cardinals 82 The groupwise density number \mathfrak{g} 85	
3.3	More complete Boolean algebras with the WFN	86
	The measure algebra of the reals 86 Getting the WFN from the WFN of small complete subalgebras 87 The larger measure algebras 90	
	Bibliography	92
