F 26:	Overall K of different membrane surface areas (6 kDa PES-membranes) tested with ZK 894.....	xxv
F 27:	Overall %iAUD of different membrane surface areas (6 kDa PES-membranes) tested with ZK 894	xxv
F 28:	Overall K of different membrane thicknesses (cellulose based membranes) tested with ZK 894	xxvi
F 29:	Overall %iAUD of different membrane thicknesses (cellulose based membranes) tested with ZK 894.....	xxvi
F 30:	Overall K of probes with different outlet materials (3 mm ² 6 kDa PES-membranes) tested with ZK 894.....	xxvii
F 31:	Overall %iAUD of probes with different outlet materials (3 mm ² 6 kDa PES-membranes) tested with ZK 894.....	xxvii

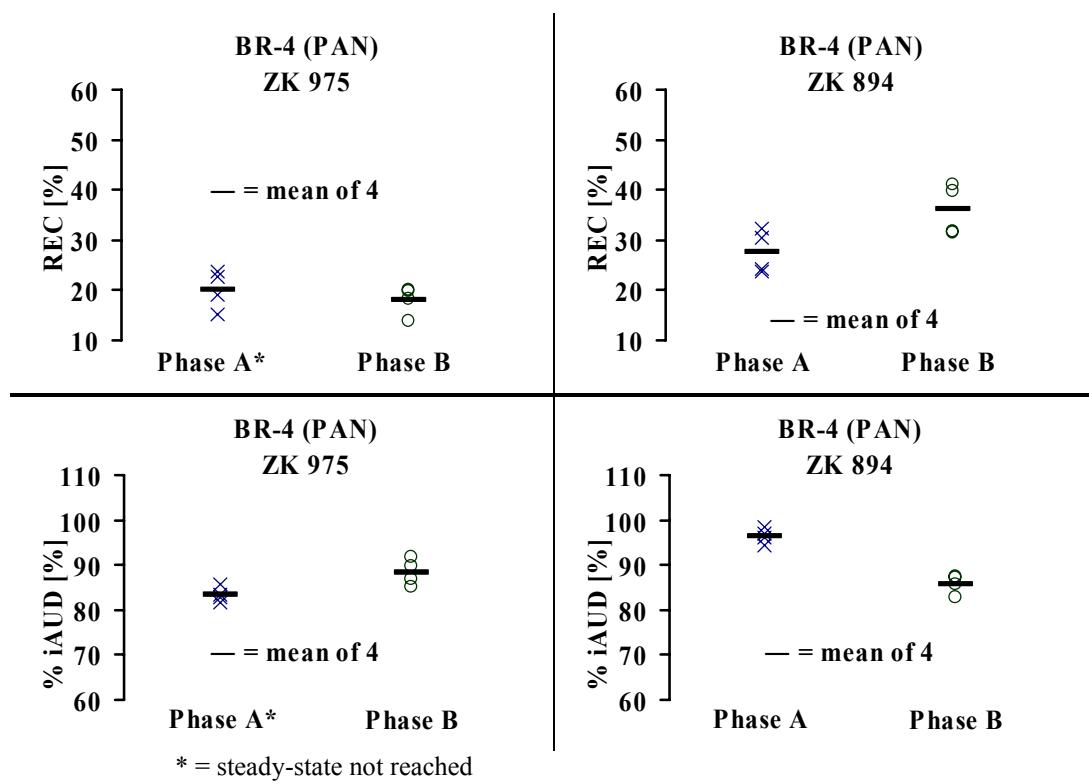

F 1: Individual (\times or \circ) and mean (—) REC and %iAUD at Phase A and Phase B for CMA/12 (PC) probe with ZK 975 and ZK 894

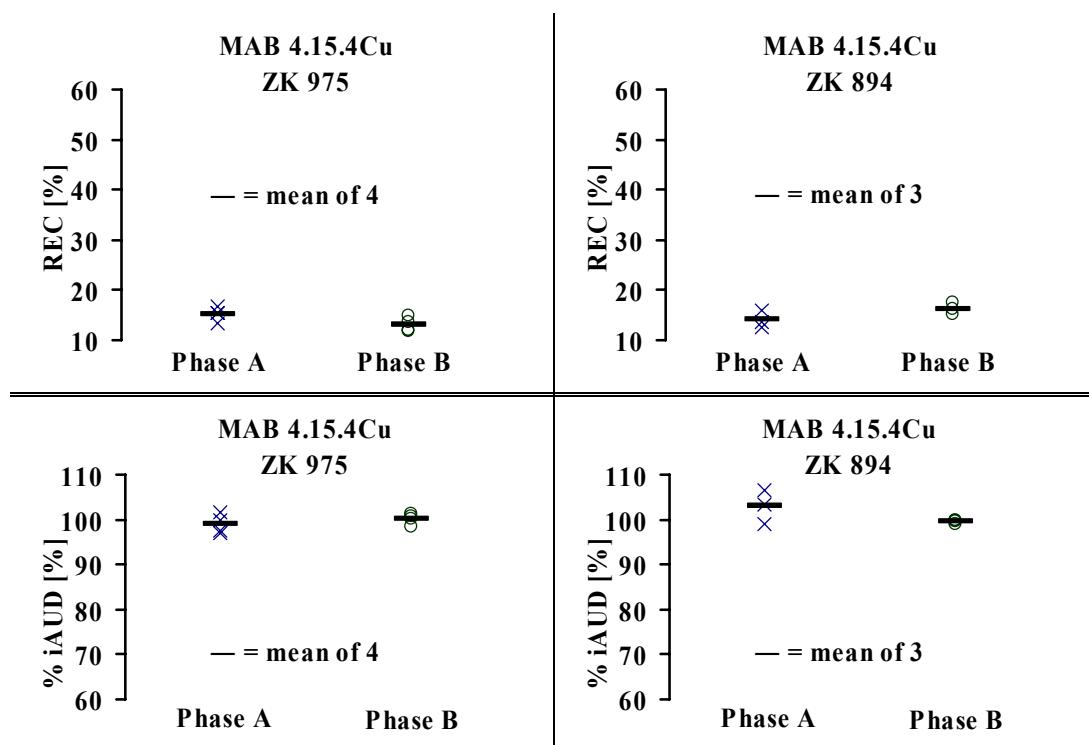

F 2: Individual (\times or \circ) and mean (—) REC and %iAUD at Phase A and Phase B for MAB 2.14.4 probe with ZK 975 and ZK 894

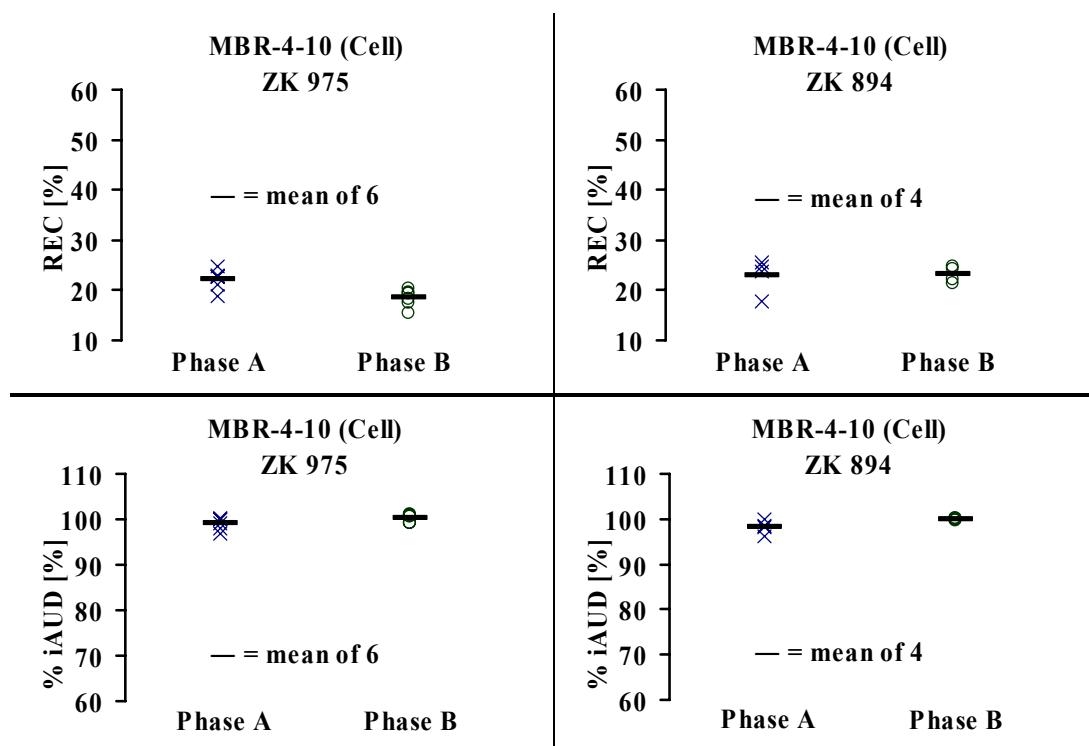

F 3: Individual (\times or \circ) and mean (—) REC and %iAUD at Phase A and Phase B for BR-4 probe with ZK 975 and ZK 894

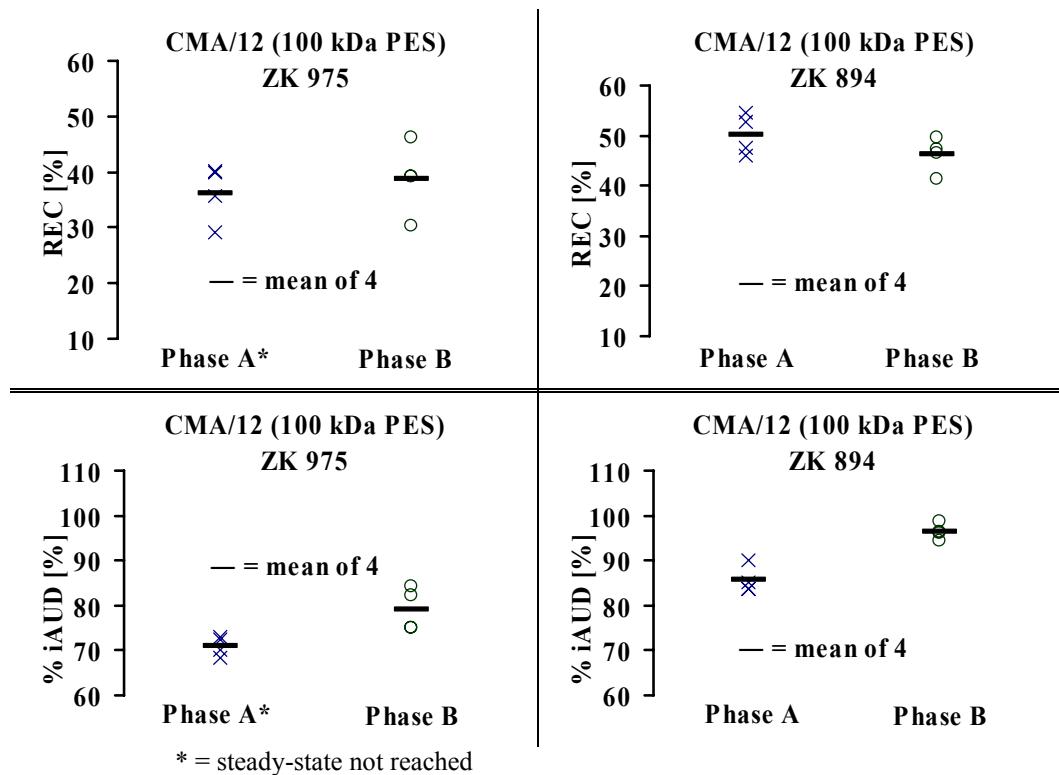

F 4: Individual (\times or \circ) and mean (—) REC and %iAUD at Phase A and Phase B for MAB 4.15.4.Cu probe with ZK 975 and ZK 894

F 5: Individual (\times or \circ) and mean (—) REC and %iAUD at Phase A and Phase B for MBR-4-10 probe with ZK 975 and ZK 894

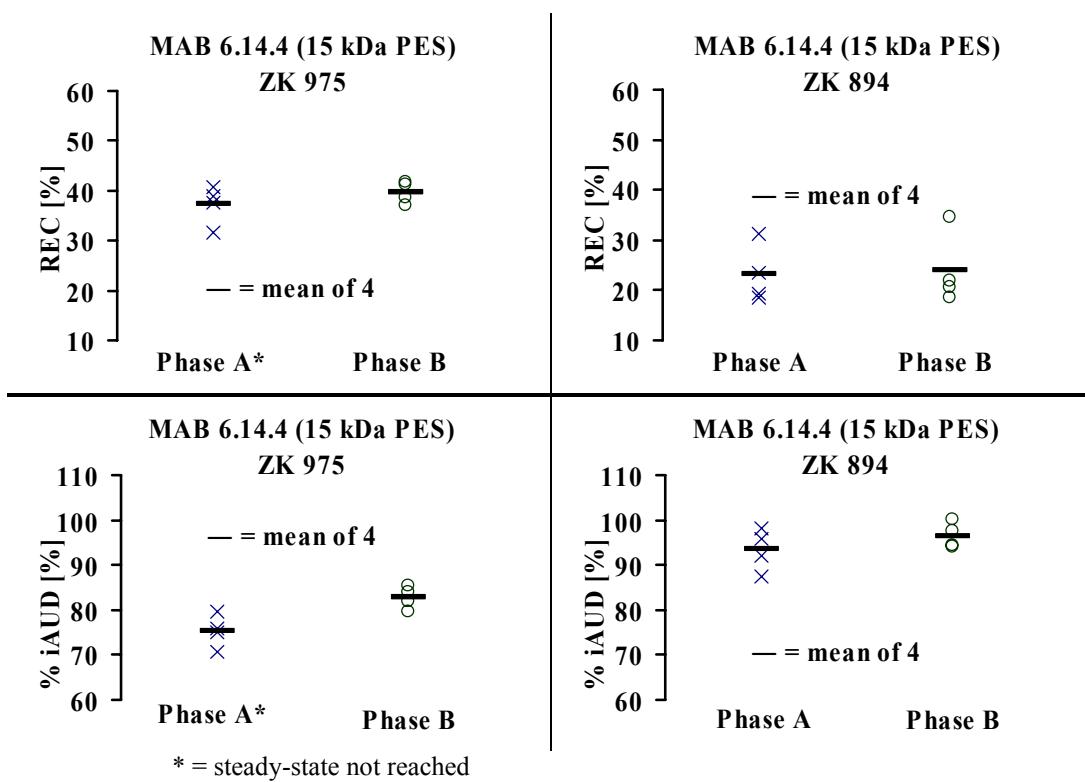

F 6: Individual (\times or \circ) and mean (—) REC and %iAUD at Phase A and Phase B for CMA/12 (PES) probe with ZK 975 and ZK 894

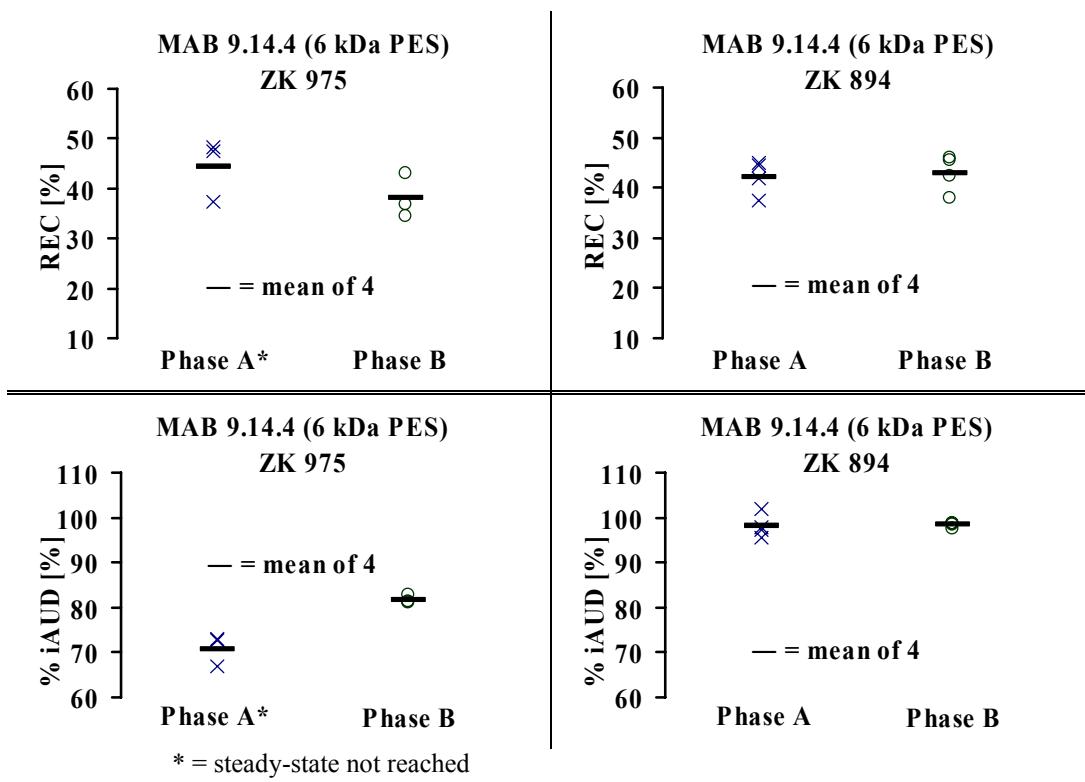

* = steady-state not reached

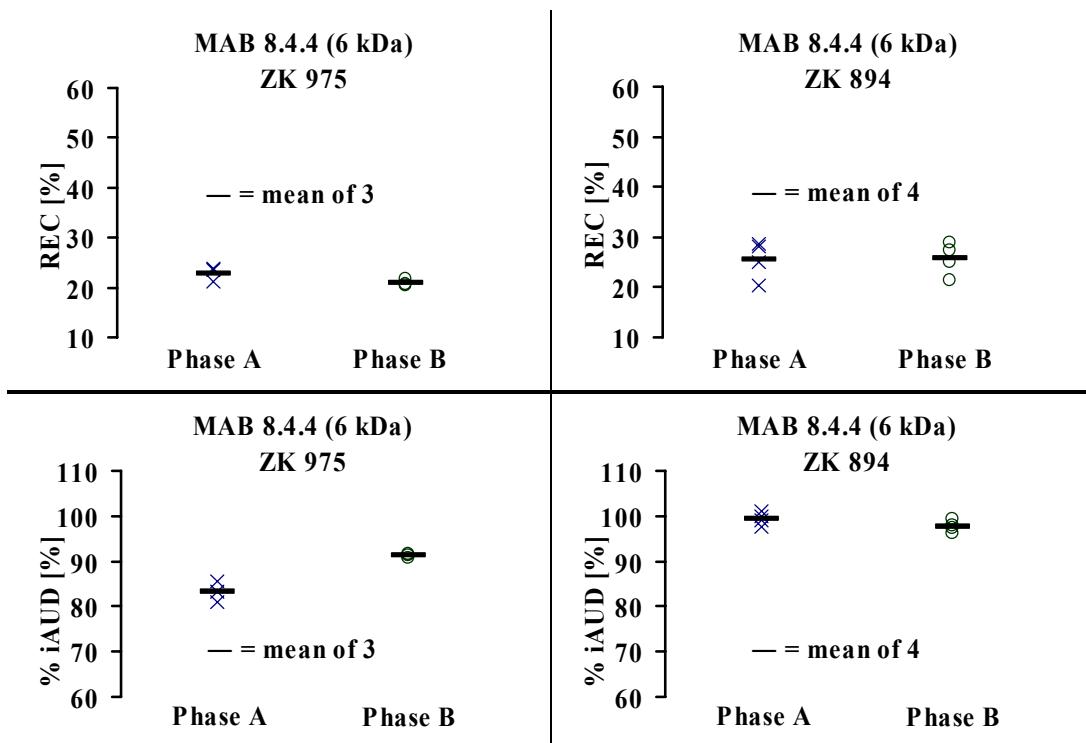

F 7: Individual (\times or \circ) and mean (—) REC and %iAUD at Phase A and Phase B for MAB 6.14.4 probe with ZK 975 and ZK 894

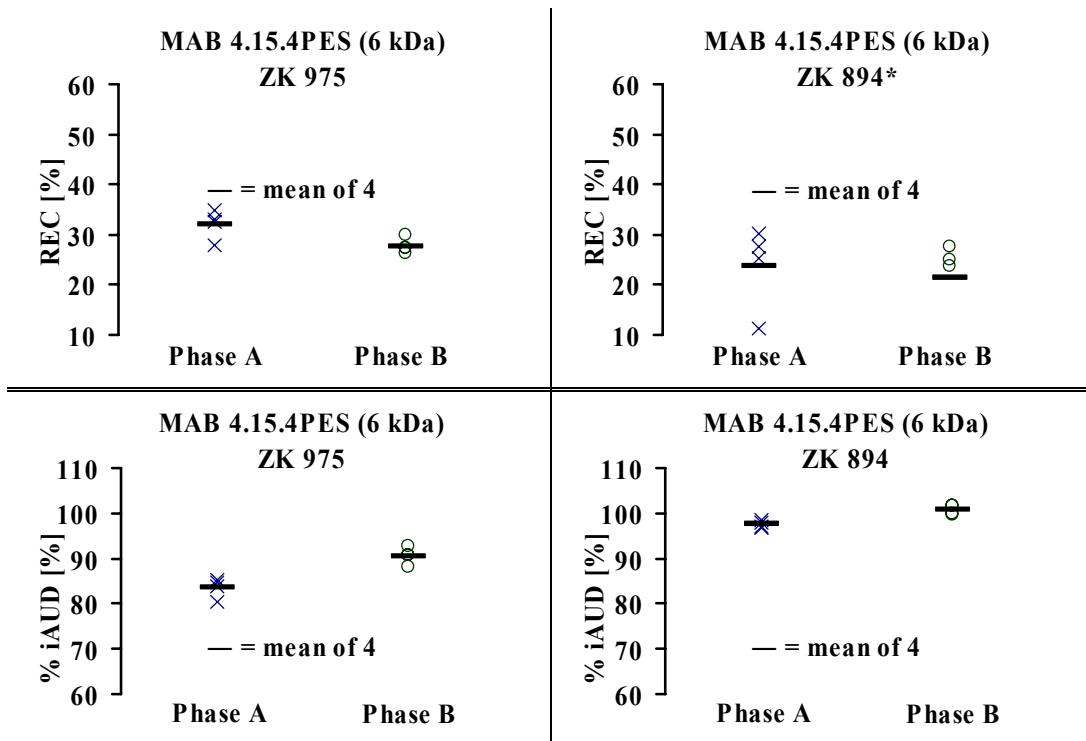

F 8: Individual (\times or \circ) and mean (—) REC and %iAUD at Phase A and Phase B for MAB 9.14.4 probe with ZK 975 and ZK 894

F 9: Individual (\times or \circ) and mean (—) REC and %iAUD at Phase A and Phase B for MAB 8.4.4 probe with ZK 975 and ZK 894

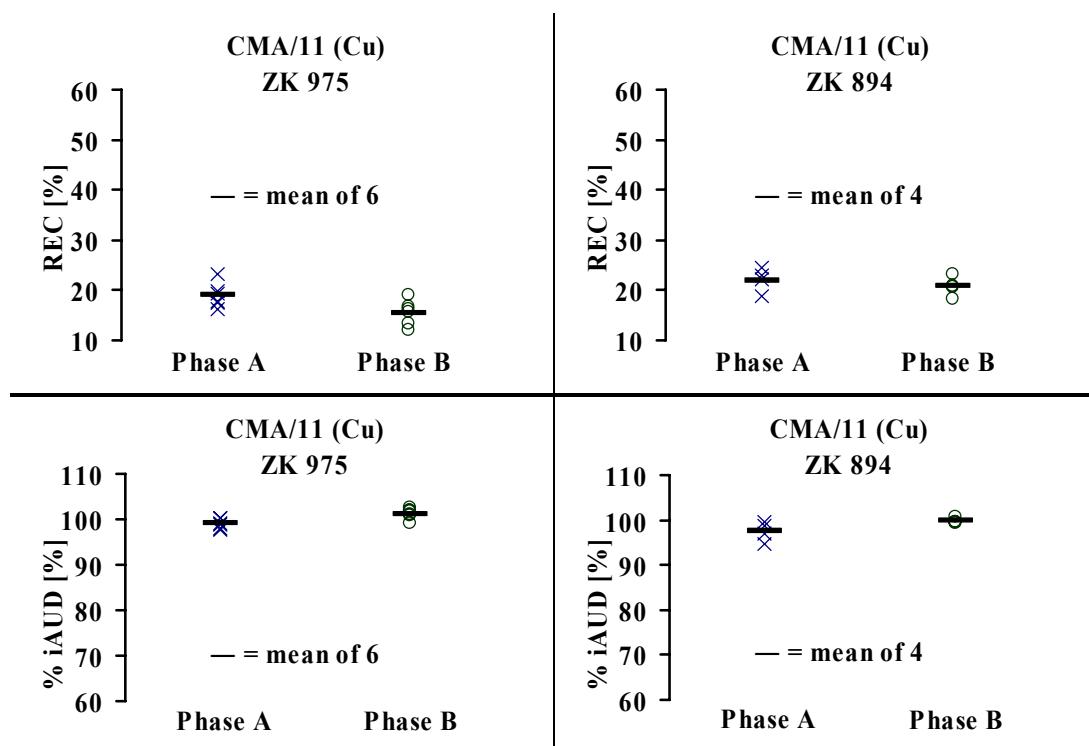

F 10: Individual (\times or \circ) and mean (—) REC and %iAUD at Phase A and Phase B for MAB 4.15.4PES probe with ZK 975 and ZK 894

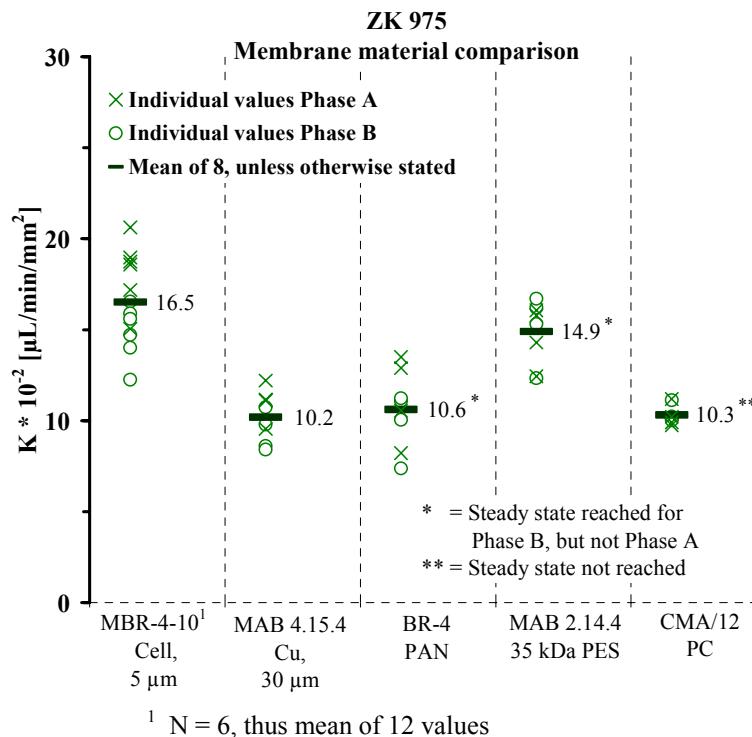

*ZK 894: one probe has a REC_A of only 11% and a REC_B of only 9.5% (off scale)

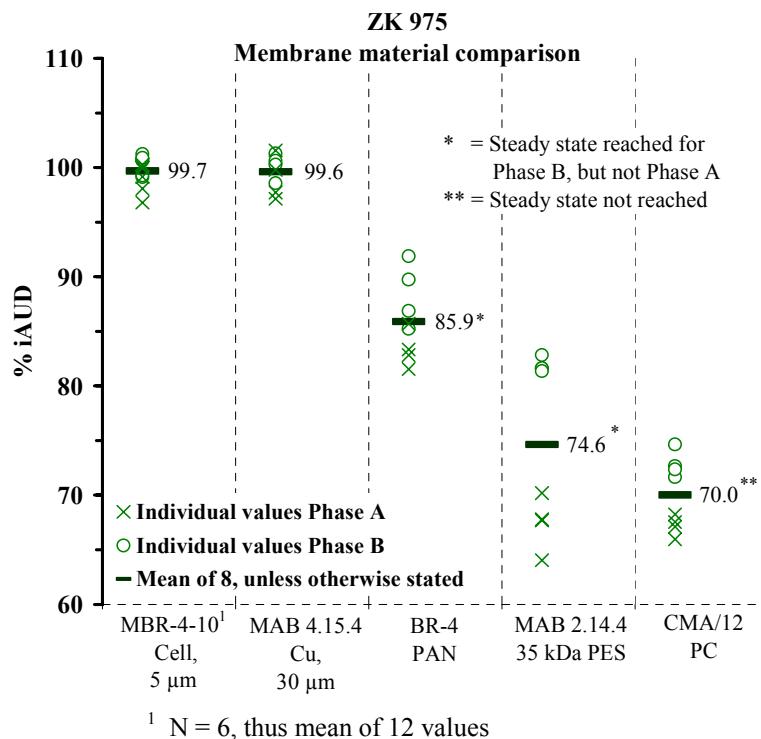

F 11: Individual (\times or \circ) and mean (—) REC and %iAUD at Phase A and Phase B for CMA/11 probe with ZK 975 and ZK 894

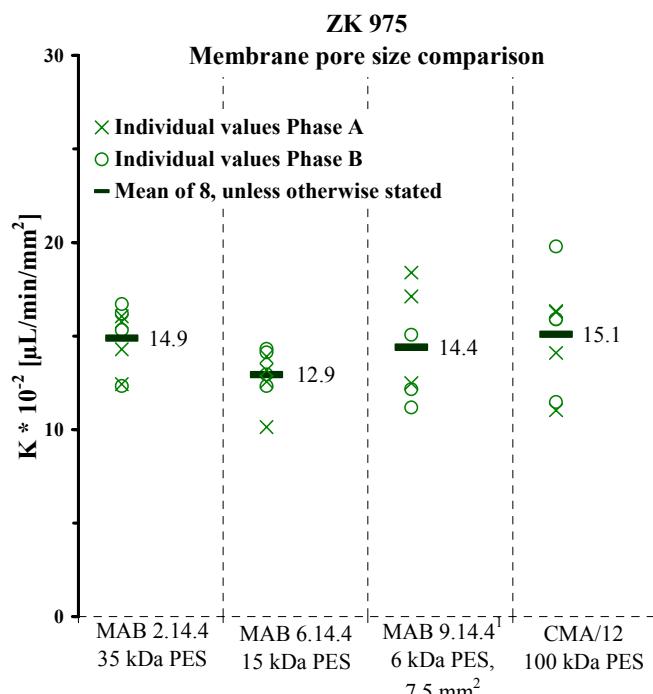

F 12: Overall K of different membrane materials tested with ZK 975

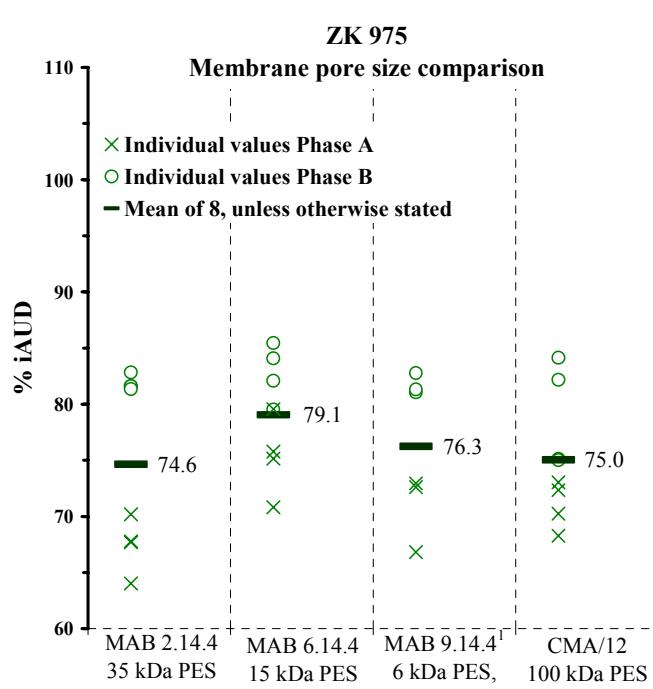

F 13: Overall %iAUD of different membrane materials tested with ZK 975

F 14: Overall K of membranes with different pore sizes (PES-membranes) tested with ZK 975

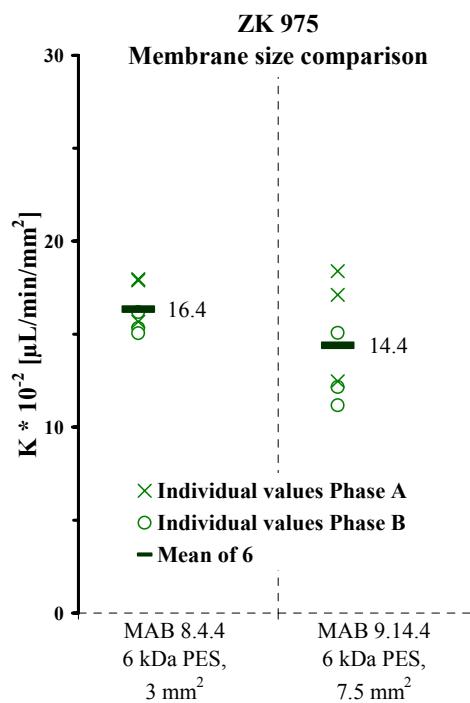

F 15: Overall %iAUD of membranes with different pore sizes (PES-membranes) tested with ZK 975

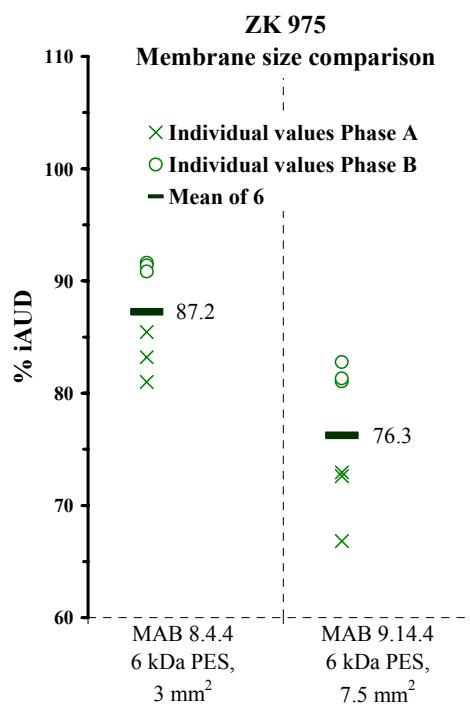

¹ N = 6, thus mean of 12 values

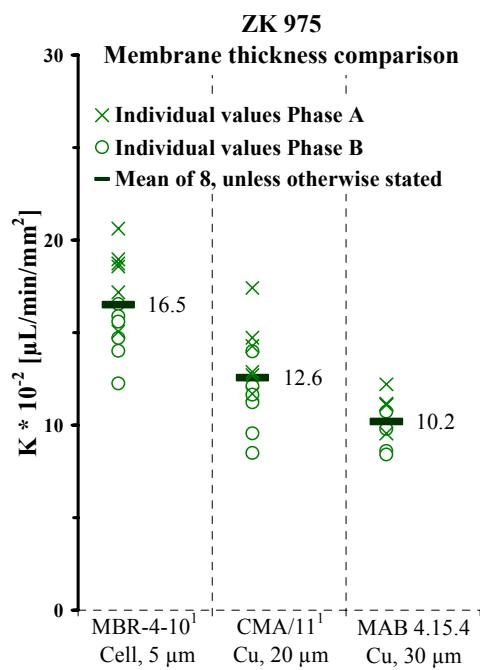

F 16: Overall K of different membrane surface areas (6 kDa PES-membranes) tested with ZK 975

F 17: Overall %iAUD of different membrane surface areas (6 kDa PES-membranes) tested with ZK 975

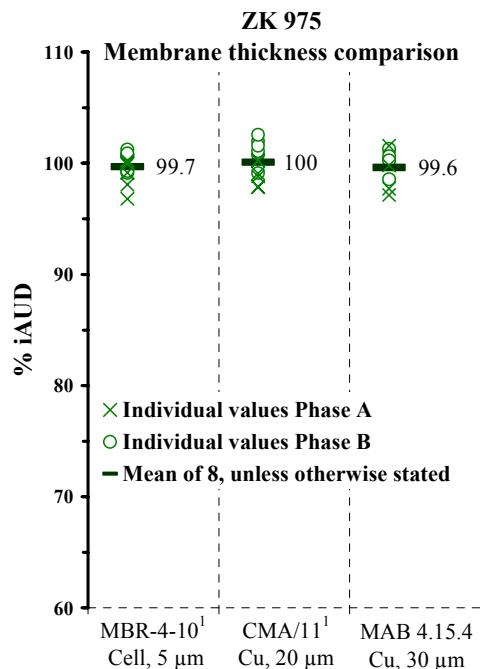

F 18: Overall K of different membrane thicknesses (cellulose based membranes) tested with ZK 975

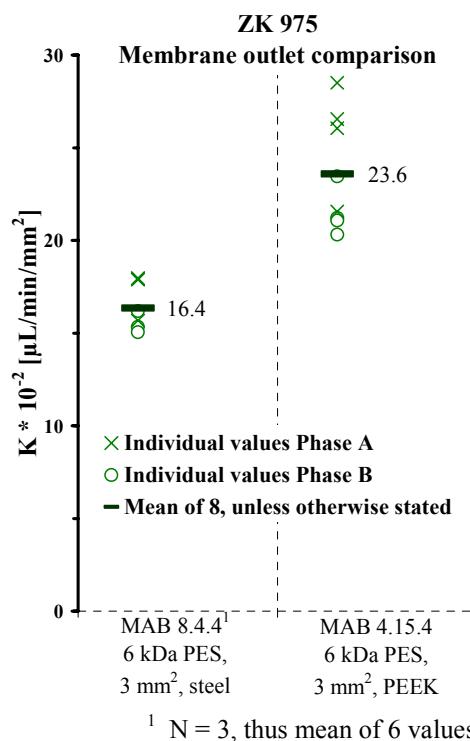

¹ N = 6, thus mean of 12 values

F 19: Overall %iAUD of different membrane thicknesses (cellulose based membranes) tested with ZK 975

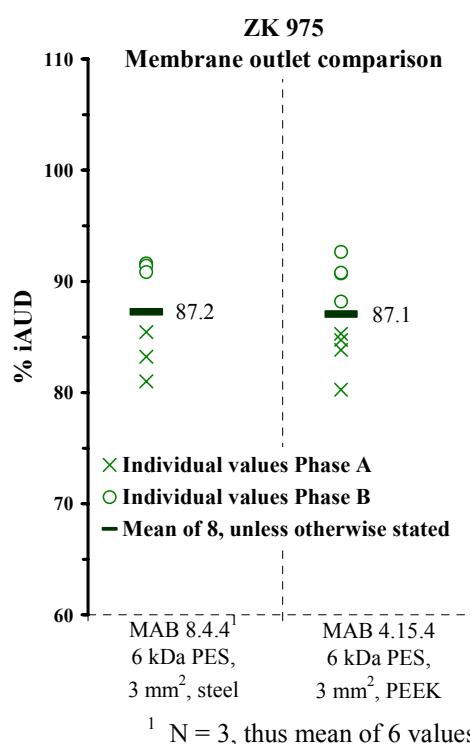

¹ N = 6, thus mean of 12 values

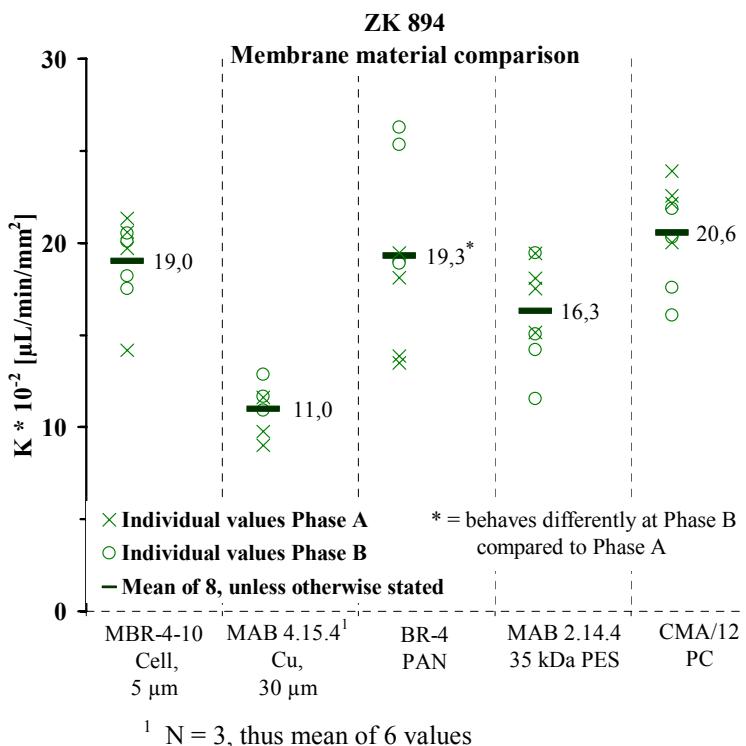

F 20: Overall K of probes with different outlet materials (3 mm^2 6 kDa PES-membranes) tested with ZK 975

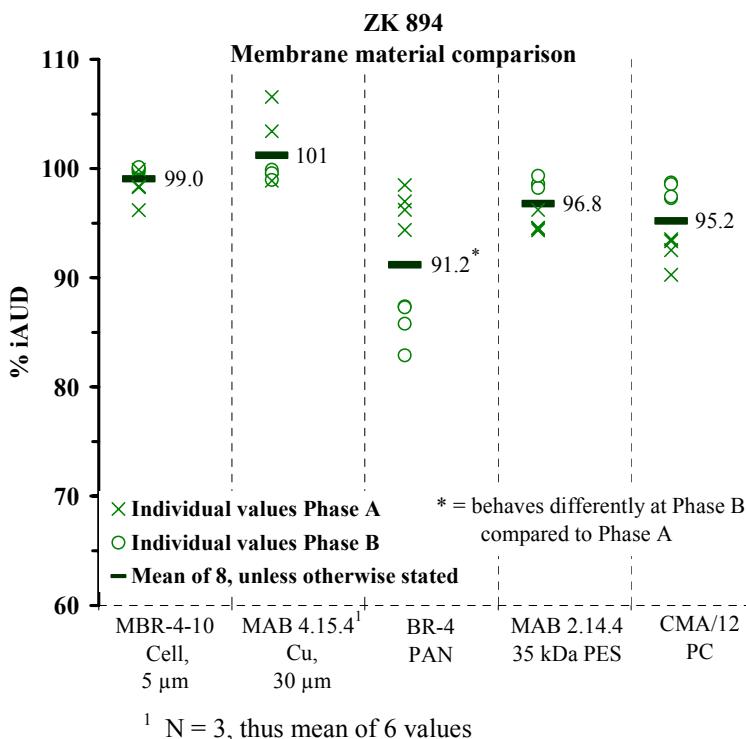

F 21: Overall %iAUD of probes with different outlet materials (3 mm^2 6 kDa PES-membranes) tested with ZK 975

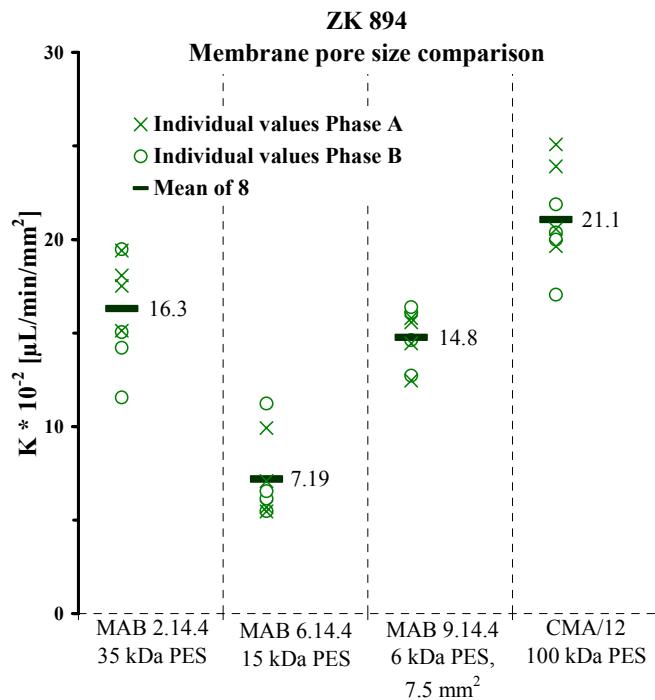

F 22: Overall K of different membrane materials tested with ZK 894

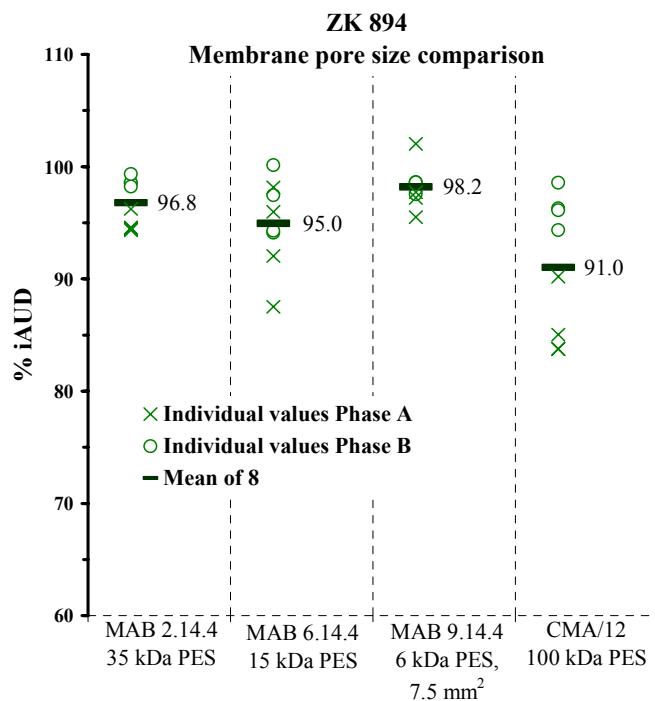

F 23: Overall %iAUD of different membrane materials tested with ZK 894

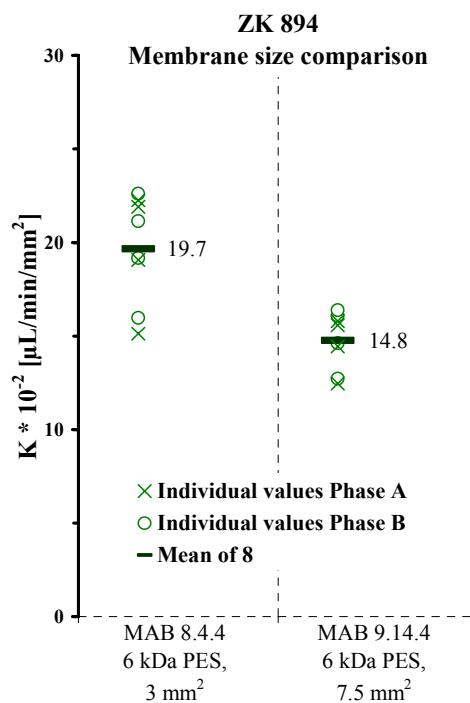

F 24: Overall K of membranes with different pore sizes (PES-membranes) tested with ZK 894

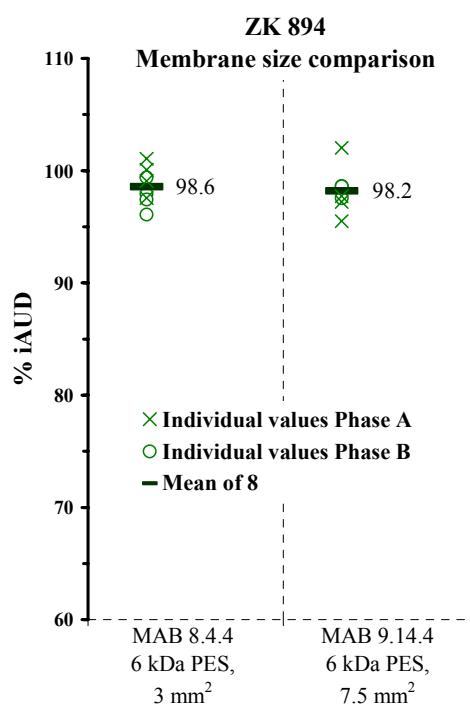

F 25: Overall %iAUD of membranes with different pore sizes (PES-membranes) tested with ZK 894

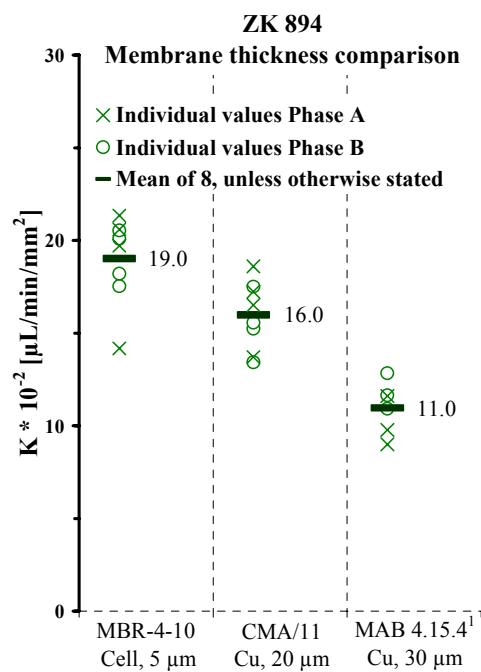

F 26: Overall K of different membrane surface areas (6 kDa PES-membranes) tested with ZK 894

F 27: Overall %iAUD of different membrane surface areas (6 kDa PES-membranes) tested with ZK 894

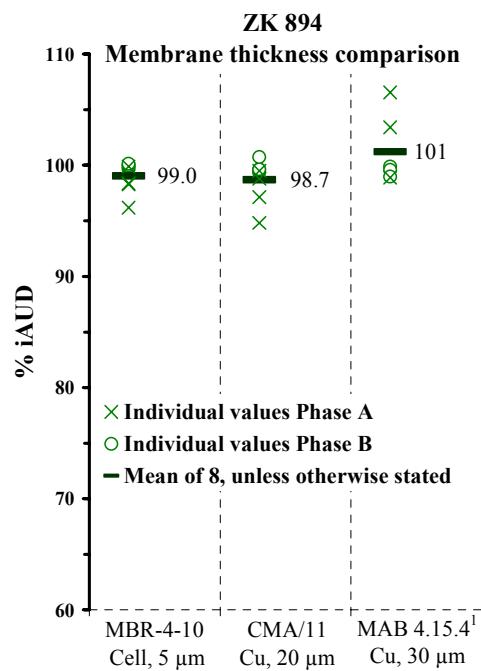

F 28: Overall K of different membrane thicknesses (cellulose based membranes) tested with ZK 894

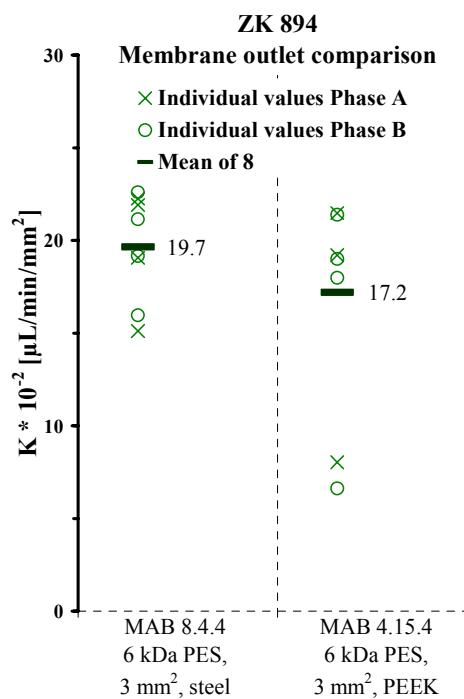

¹ N = 3, thus mean of 6 values

F 29: Overall %iAUD of different membrane thicknesses (cellulose based membranes) tested with ZK 894

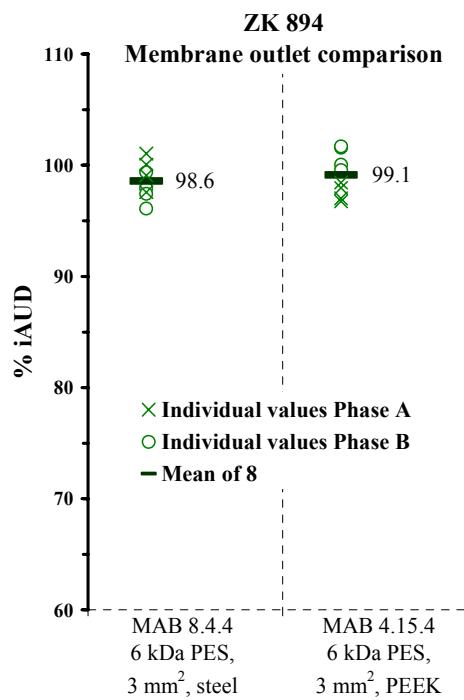

¹ N = 3, thus mean of 6 values

F 30: Overall K of probes with different outlet materials (3 mm^2 6 kDa PES-membranes) tested with ZK 894

F 31: Overall %iAUD of probes with different outlet materials (3 mm^2 6 kDa PES-membranes) tested with ZK 894

Appendix III (Chromatograms)

C 1:	Scanned and labeled imaging plate for stability testing of compounds used (raw data).....	lviii
C 2:	Chromatogram 1 μM ^{14}C -ZK 975 solution, freshly made, sample 1 of 2	lix
C 3:	Chromatogram 1 μM ^{14}C -ZK 975 solution, stored for 1.5 hrs under microdialysis probe test conditions, sample 1 of 2.....	lx
C 4:	Chromatogram 10 μM ^{14}C -ZK 975 solution, after 1.5 hrs storage at room temperature (tubing test conditions), sample 1 of 2	lxii
C 5:	Chromatogram 10 μM ^{14}C -ZK 975 solution, stored for 3.5 hrs under microdialysis probe test conditions, sample 1 of 2.....	lxiii
C 6:	Chromatogram 1 μM ^{14}C -ZK 894 solution, freshly made, sample 1 of 2	lxiv
C 7:	Chromatogram 1 μM ^{14}C -ZK 894 solution, stored for 1.5 hrs under microdialysis probe test conditions, sample 1 of 2.....	lxv
C 8:	Chromatogram 10 μM ^{14}C -ZK 894 solution, after 1.5 hrs storage at room temperature (tubing test conditions), sample 1 of 2	lxvi
C 9:	Chromatogram 10 μM ^{14}C -ZK 894 solution, stored for 3.5 hrs under microdialysis probe test conditions, sample 1 of 2.....	lxvii

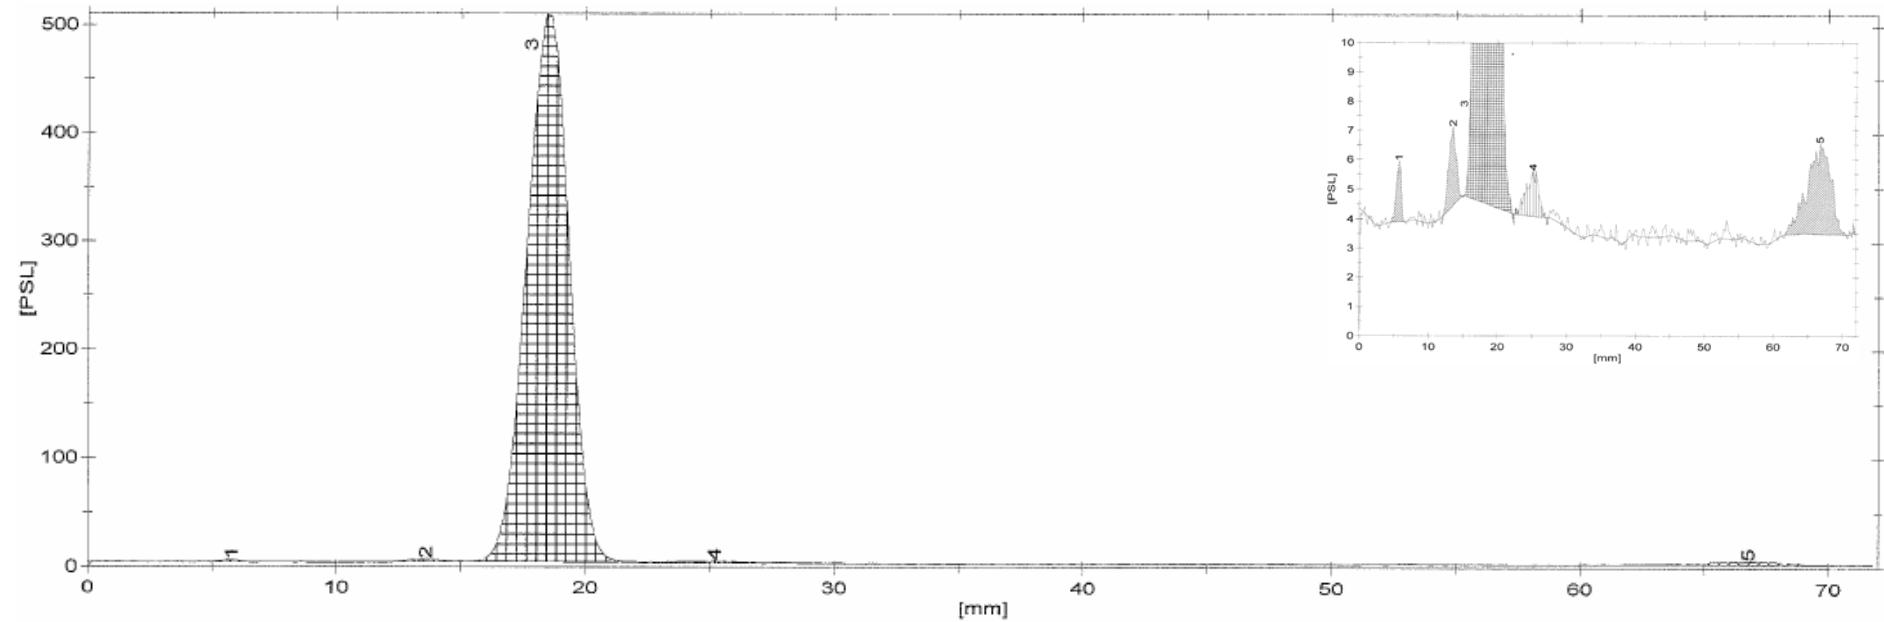

C 1: Scanned and labeled imaging plate for stability testing of compounds used (raw data)

As a representative selection, the chromatograms of the following profiles are shown below: profile 3 (1 µM freshly made), profile 5 (1 µM after 1.5 hrs microdialysis experimental conditions), profile 7 (10 µM after 1.5 hrs room temperature) and profile 9 (10 µM after 3.5 hrs microdialysis experimental conditions) for ZK 975, and the corresponding chromatograms of profiles 13, 15, 17 and 19 for ZK 894. The presented inlays merely have a truncated y-axis, for better detail of the smaller peaks. Note that the retention times (in mm) differ according to the lengths of the profiles.
